Platform Ops

Technical and Commercial Proposal

Monthly Operation of the Kubernetes Platform on «TARGET CLOUD» and of the Applications Running on It

Proposal No: KOMTAS-«CUSTOMER ABBREVIATION»-APM-C-«YEAR»-«SEQUENCE»

Proposal Date: «dd Month yyyy»

Validity: «proposal date + 1 month»

VARIABLE GLOSSARY — in this template only the fields inside « » change per customer. All other text is fixed.

Identity: «CUSTOMER» short customer name used in the text · «CUSTOMER NAME» full legal name (cover) · «GROUP COMPANIES» group companies in scope; delete the line for a single company · «CUSTOMER ABBREVIATION» short code in the proposal number · «YEAR» year · «SEQUENCE» proposal sequence number · «dd Month yyyy» proposal date · «proposal date + 1 month» end of validity · «price validity date» latest start date for which the fees stay valid

Context: «CUSTOMER CONTEXT» one paragraph: company or group, sector, current application estate and data centre, reason for the request

Scope: «TARGET CLOUD» Google Cloud or Microsoft Azure · «ASSESSMENT REF» proposal or project number of the Assessment (A) whose inventory is the basis of the platform; delete the reference if there is none · «MIGRATION REF» proposal or project number of the Migration (B) that built the platform; delete the reference if the platform was not built by Komtaş · «SUPPORT HOURS» support hours (e.g. weekdays 09:00–18:00 Türkiye time) · «BAND» sizing band S, M or L from the proposal input form

Commercial: «fee» fee excl. VAT · «monthly fee» monthly fee excl. VAT · «amount» payment amount excl. VAT · «day rate» person-day rate (change requests) · «hour rate» hourly rate for work above the monthly capacity · «CITY» city where on-site meetings are free of charge

Values: «NUMBER» numeric value (count, days, weeks, months, hours) · «%» percentage

Annex: «REFERENCE PROJECT» reference project approved for this proposal (no names without permission)

Contacts: «full name» contact name · «title» contact title · «e-mail / phone» contact details

The orange GÜNER DOĞRULASIN tag marks a draft statement to be verified before use. FILL NOTE boxes are internal and are deleted before sending.

Contents

FILL NOTE — this template is for service C (Platform Ops) of the Application Modernization package: the monthly operation of the Kubernetes platform and of the applications deployed on it. It is normally used after service B. It can also be used for a platform built by «CUSTOMER» or by another party; in that case keep the second paragraph of Section 4.1 and delete the reference to «MIGRATION REF». «GÜNER DOĞRULASIN»

Statements followed by the orange GÜNER DOĞRULASIN tag are draft assumptions of the package (capacity, activities, frequencies, priorities, roles, term, scope). They are verified with Cloud Solutions before the template is used; after verification only the tag is deleted. No proposal is sent with a tag in it.

Order of completion: platform in scope and band from the proposal input form (Table 2) → support hours and response times (Table 6) → effort and fees (Section 9) → term (Section 11) → remaining placeholder fields. Margin, discount or incentive figures are never written into this proposal.

1. Purpose

«CUSTOMER CONTEXT»

The aim of this proposal is to operate the Kubernetes platform of «CUSTOMER» on «TARGET CLOUD» and the applications deployed on it, month by month, from a fixed monthly capacity of hours. The platform was built in the Migration project «MIGRATION REF», on the basis of the inventory of the Assessment «ASSESSMENT REF».

The platform consists of managed Kubernetes clusters (Google Kubernetes Engine on Google Cloud, Azure Kubernetes Service on Microsoft Azure), set up with Terraform and Helm; application deployments are applied with Argo CD.

The package is offered as three services. This proposal covers service C.

Service	Focus	Result	Pricing
A — Assessment	Inventory, 6R classification, target architecture, wave plan	Decision basis and migration estimate	Fixed fee (separate proposal)
B — Migration	Platform foundation, pilot application, migration in waves, cutover	Applications running on «TARGET CLOUD»	Unit price per application or capped T&M (separate proposal)
C — Platform Ops	Monthly operation of the platform and the applications on it	Platform in operation	Monthly fee

Table 1 — Service structure.

2. Scope

2.1 Platform in Scope

Item	Scope
Target cloud	«TARGET CLOUD»
Number of clusters	«NUMBER»
Environments (e.g. development, test, production)	«NUMBER»
Applications in operation	«NUMBER»
Target availability (SLA) of the platform design	«%»
Support hours	«SUPPORT HOURS»
Monthly capacity	«NUMBER» hours
Sizing band	«BAND»

Table 2 — Platform in scope.

If the number of clusters or applications changes by more than «NUMBER», the band and the monthly capacity are reassessed.

2.2 Service Components

Area	Content
Kubernetes operations	Cluster and node pool health, scaling settings, platform components (ingress, certificates, Argo CD, monitoring agents) «GÜNER DOĞRULASIN»
Version upgrades	Kubernetes version upgrades and upgrades of the platform components, planned with «CUSTOMER» and tested in a non-production environment first «GÜNER DOĞRULASIN»
GitOps and CI/CD	Maintenance of the Argo CD configuration, Helm charts, Terraform modules and CI/CD pipeline templates «GÜNER DOĞRULASIN»
Monitoring and alerting	Dashboards and alert rules for the platform and the applications; handling of alerts within the support hours «GÜNER DOĞRULASIN»
Incident support	Response to incidents on the platform by priority (Section 4.3); root-cause analysis for priority 1 incidents «GÜNER DOĞRULASIN»
Cost follow-up	Monthly view of the cloud cost of the platform, with recommendations on rightsizing and idle resources «GÜNER DOĞRULASIN»
Small changes	Changes requested by «CUSTOMER» that fit within the monthly capacity (e.g. a new environment variable set, a new namespace, an alert rule, a deployment of a new application version) «GÜNER DOĞRULASIN»

Table 3 — Service components.

2.3 Boundaries

- Application code and functional faults remain with the application owners or their vendors; Komtaş supports the analysis at platform level. «GÜNER DOĞRULASIN»
- Database administration of the application databases (e.g. query tuning, schema changes) is not part of the service; the managed database services are followed at platform level only. «GÜNER DOĞRULASIN»
- Moving further applications to the platform is done in additional waves of service B.
- A review of the cost, identity and configuration of the whole cloud environment is the subject of Cloud Checkup.

3. Approach

3.1 Operating Model

The platform is operated through GitOps: changes to the platform and to application deployments are made in the Git repositories and applied by Argo CD. Manual changes in the clusters are made only during incidents and are written back to the repositories afterwards. «GÜNER DOĞRULASIN»

Requests and incidents are recorded in a ticket system agreed in the onboarding period. Each record has a priority, an owner and a status. «GÜNER DOĞRULASIN»

3.2 Division of Responsibilities

Responsibilities are divided as follows: «GÜNER DOĞRULASIN»

Area	Komtaş	«CUSTOMER»
Clusters and node pools	Operation, scaling settings, upgrades	Approval of upgrade dates
Platform components	Operation and upgrades	—
Application deployments	Pipeline and Argo CD operation; deployment on request	Release decision and application versions
Application code and configuration content	Support at platform level	Owner
Cloud account, billing and licences	Cost follow-up and recommendations	Owner; payment to the provider
Network and security policies	Applies the agreed policies on the platform	Sets the policies and approves changes

Table 4 — Division of responsibilities.

3.3 Monthly Capacity

The monthly capacity is «NUMBER» hours. It covers routine operations, version upgrades, pipeline maintenance, incident work and small changes. «GÜNER DOĞRULASIN»

Unused hours are not carried over to the next month. «GÜNER DOĞRULASIN»

Work above the monthly capacity is carried out only after written approval of «CUSTOMER», at the hourly rate in Section 9. «GÜNER DOĞRULASIN»

A change that needs more than «NUMBER» hours is estimated and proposed separately. «GÜNER DOĞRULASIN»

4. Activities and Timeline

4.1 Start of Service

The service starts with an onboarding period of «NUMBER» weeks: access, runbooks, monitoring and alert routing are checked, the ticket system and the contact and escalation list are agreed. «GÜNER DOĞRULASIN»

If the platform was not built by Komtaş, the onboarding period also includes a review of the platform against the target architecture of the package. Findings that prevent operation are fixed before the start of service, as a separate item. «GÜNER DOĞRULASIN»

4.2 Monthly Cycle

Activity	Content	Frequency
Monitoring and alerts	Platform and application alerts handled	Within the support hours
Security patches	Node images and platform components patched	Monthly «GÜNER DOĞRULASIN»
Version upgrades	Kubernetes and platform component upgrades	Following the release calendar of the provider, agreed with «CUSTOMER» «GÜNER DOĞRULASIN»
Backup and restore check	Restore of cluster configuration and application deployments tested from the Git repositories	Quarterly «GÜNER DOĞRULASIN»
Cost follow-up	Cloud cost of the platform, idle resources, rightsizing	Monthly «GÜNER DOĞRULASIN»
Monthly report and review meeting	Availability, incidents, changes, upgrades, use of the capacity, cost, requests	Monthly «GÜNER DOĞRULASIN»
Small changes	Request → estimate → approval by «CUSTOMER» → change through Git → check	On request, within the capacity

Table 5 — Monthly cycle.

4.3 Support Hours and Priorities

Support is given within «SUPPORT HOURS». Incidents are handled by priority:

Priority	Definition	Response Time
P1 — Critical	Platform or a production application down; no workaround «GÜNER DOĞRULASIN»	«NUMBER» hours
P2 — High	Production degraded, or a production application partly unavailable	«NUMBER» hours
P3 — Medium	Non-production environment down, or production issue with a workaround	«NUMBER» hours
P4 — Low	Question or request without effect on operation	«NUMBER» working days

Table 6 — Priorities and response times.

Outside the support hours, P1 incidents are handled only if on-call support is agreed. On-call support is priced separately. «GÜNER DOĞRULASIN»

Response time is measured from the record of the incident in the ticket system to the first response of the Komtaş engineer.

5. Deliverables and Acceptance

5.1 Deliverables

Documents are delivered in Turkish, in editable format (Microsoft Word / Excel / PowerPoint) together with a PDF copy.

#	Deliverable	Frequency	Content
D1	Onboarding report	Once	Access, runbooks, alert routing, contact and escalation list; findings of the platform review if any
D2	Runbooks	Kept up to date	Operating procedures of the platform: upgrade, restore, scaling, incident handling
D3	Monthly operations report	Monthly	Availability, incidents by priority, response times, changes, upgrades, use of the capacity, cloud cost and recommendations «GÜNER DOĞRULASIN»
D4	Incident report	Per P1 incident	Timeline, cause, resolution and measures against recurrence «GÜNER DOĞRULASIN»
D5	Upgrade record	Per upgrade	Versions before and after, test result in non-production, date of the production upgrade

Table 7 — Deliverables.

5.2 Acceptance

The monthly operations report is reviewed by «CUSTOMER» within «NUMBER» working days. If no written objection is received in that period, the report and the hours used are deemed accepted.

The response times in Table 6 are the service levels of this proposal. The availability of the applications also depends on the cloud provider and on the applications themselves; it is reported monthly but is not a service level of this proposal. «GÜNER DOĞRULASIN»

6. Customer Responsibilities

«CUSTOMER» is responsible for the items below. A delay in any of them can affect the service levels.

- Appoint a service owner who approves requests, upgrade dates and work above the capacity.
- Provide the access needed for operation: administrator roles on the clusters and the cloud projects or subscriptions in scope, and write access to the Git repositories of the platform. «GÜNER DOĞRULASIN»
- Name the application owners who are contacted for application faults and for release decisions.
- Approve the dates of version upgrades and maintenance windows.
- Carry out the tests of the applications after upgrades where the application owners request it.
- Keep the cloud account and the contract with the cloud provider active.
- Inform Komtaş in advance of changes in the network and security policies that affect the platform.

7. Assumptions and Out of Scope

7.1 Assumptions

The capacity and fee in this proposal are based on the assumptions below. If they do not hold, the impact is assessed through a change request.

- The platform in scope matches Table 2.
- The platform is managed with Terraform, Helm and Argo CD; resources created outside these tools are brought under them in the onboarding period or are excluded from the service. «GÜNER DOĞRULASIN»
- The work is carried out remotely; on-site work in «CITY» is agreed case by case. «GÜNER DOĞRULASIN»
- The working language and the language of the deliverables is Turkish.

7.2 Out of Scope

The topics below are outside the scope of this proposal. If requested, they are assessed and proposed separately.

- Moving further applications to the platform (additional waves of service B).
- Development of application code and new features. «GÜNER DOĞRULASIN»
- Changes that only the vendor of a third-party product can make. «GÜNER DOĞRULASIN»
- Execution of user acceptance tests. «GÜNER DOĞRULASIN»
- Support outside «SUPPORT HOURS» unless on-call support is agreed. «GÜNER DOĞRULASIN»
- Cloud consumption and licence costs.

8. Team

Role	Responsibility	Involvement
Platform Ops Lead	Monthly report and review meeting, request management, escalation	Monthly, part time «GÜNER DOĞRULASIN»
Platform / Kubernetes Engineer	Operations, upgrades, incidents, small changes	Within the monthly capacity «GÜNER DOĞRULASIN»

Table 8 — Komtaş team and roles.

- The team is drawn from the cloud team of Komtaş. A second engineer who knows the platform is named as backup. «GÜNER DOĞRULASIN»
- If a change in the team is needed, the replacement has at least equivalent qualifications and is notified to «CUSTOMER» in advance.

9. Effort and Fees

FILL NOTE — take the band and the monthly capacity from the proposal input form (app-modernization-3c-platform-ops-girdi-formu). Fees are entered by sales. Draft values:

Monthly capacity: S 40 hours · M 80 hours · L 160 hours. «GÜNER DOĞRULASIN»

The band follows the number of clusters and of applications in operation. «GÜNER DOĞRULASIN»

Minimum term: 12 months. «GÜNER DOĞRULASIN»

The values are not based on recorded effort and are updated with the data of Cloud Solutions. Delete this box before sending.

Platform Ops is charged as a monthly fee for the monthly capacity in Table 2.

Item	Band	Capacity	Fee (excl. VAT)
Platform Ops	«BAND»	«NUMBER» hours per month	«monthly fee» per month
Onboarding period	—	«NUMBER» person-days	«fee»
Work above the monthly capacity	—	Per hour	«hour rate»
Change requests	—	Per person-day	«day rate»

Table 9 — Fees. All fees exclude VAT.

Payment Item	Amount (excl. VAT)
Onboarding period — at its end	«amount»
Platform Ops — monthly, at the end of each month	«monthly fee»
Work above the capacity — monthly, with the hours approved	«amount»

Table 10 — Payment schedule. All fees exclude VAT.

Cloud consumption and licence costs are not part of this proposal.

10. Next Step

Platform Ops can be extended as the use of the platform grows. The usual follow-on work is:

Need	Follow-On Work
Further applications to move	Additional waves of service B Migration
More clusters or applications in operation	Higher band and monthly capacity of Platform Ops
Review of the cloud environment	Cloud Checkup: cost, identity and access, configuration
Data pipelines and analytic databases	ETL Modernization on Google Cloud, Data Modernization
Cloud consumption	Purchase of Google Cloud or Microsoft Azure consumption through Komtaş

Table 11 — Follow-on work.

10.1 Further Waves

Applications planned for later in the wave plan are moved in additional waves of service B. Once they go live, they are added to Platform Ops and the band is reassessed.

10.2 Consumption

Komtaş is a Google Cloud Premier partner and has completed its partnership with Microsoft Azure. The cloud consumption of «CUSTOMER» can be purchased through Komtaş; the commercial terms are set out in a separate proposal. «GÜNER DOĞRULASIN»

11. Commercial Terms

11.1 General Terms

- All fees in this proposal are stated in Turkish lira and exclude VAT. Statutory taxes, duties and charges are not included in the fees.
- The proposal is valid until «proposal date + 1 month».
- The fees are valid on condition that the service starts by «price validity date». If the start moves beyond that date for any reason, the fees and pricing terms are reassessed by mutual agreement in the light of the economic and financial conditions at the time of the work.
- Platform Ops has a minimum term of «NUMBER» months, starting at the end of the onboarding period. After the minimum term it continues month by month and can be ended by either party with «NUMBER» months' written notice.
- The monthly fees are reviewed once a year by mutual agreement.
- Payment follows the payment schedule in Section 9. Invoices are payable within «NUMBER» days of the invoice date.
- Scope changes are managed through a written change request; no change is implemented before its impact analysis is approved.
- The parties keep confidential all information they access within the scope of the work. A separate non-disclosure agreement is signed where needed.
- At the end of the service, the runbooks, the repositories and the access are handed over to «CUSTOMER» or to the party it names.
- This proposal forms an integral annex to the contract to be signed by the parties. In the event of a conflict between the contract and the proposal, the contract prevails.

11.2 Proposal Contact Details

Questions on this proposal and its scope can be addressed to the contacts below.

Area of Responsibility	Full Name	Title	Contact
Commercial	«full name»	«title»	«e-mail / phone»
Technical	«full name»	«title»	«e-mail / phone»

11.3 Proposal Annexes

This proposal is submitted with the following annex:

- ANNEX-1 — About Komtaş

ANNEX-1 — About Komtaş

> *FILL NOTE — the figures in Table 12 and in the bullets below come from the proposals of 2026. Check them against the current corporate profile before sending.*

Komtaş is an independent information technology company that has specialised in enterprise data management in Türkiye since 1989. More than 35 years of focus on a single field has given it an end-to-end view that follows data from the moment it is created to the moment a decision is taken.

Indicator	Value
Founded	1989 — more than 35 years of continuous data-focused activity
Specialist staff	250+ data engineers, architects, consultants and analysts
Offices	Istanbul, Ankara, Izmir, Dubai
Strategic partnerships	10+ global technology vendors
Focus area	Data governance, data architecture, analytics, artificial intelligence and AI agent based solutions
Positioning	"From Data to Agents" — integrated capability from data to AI agents

Table 12 — Komtaş corporate profile.

Service Capabilities

The service portfolio of Komtaş covers the whole life cycle of a data initiative:

- **Data Governance and Data Management:** data governance maturity assessment, framework and organisation design, policy and process design, data catalogue, business glossary, data quality management, master data management, data privacy and classification.
- **Data Architecture and Engineering:** data warehouse and data lake architectures, lakehouse design, data integration and streaming architectures, cloud and on-premises modernisation.
- **Analytics and Artificial Intelligence:** enterprise reporting, advanced analytics, machine learning models, generative AI applications and AI governance.
- **Managed Services and Support:** P1 / P2 / P3 support for production systems, capacity and performance management, continuous improvement services.
- **Training and Capability Building:** product training, role-based data governance training, train-the-trainer programmes.

Cloud Partnerships

Komtaş is a Google Cloud Premier partner. Its partnership with Microsoft Azure has been completed. The cloud team of Komtaş designs, builds and operates Kubernetes platforms on both providers.

Application Modernization Experience

The cloud team of Komtaş has moved an on-premises application estate to Kubernetes on Google Cloud, with Terraform, Helm and Argo CD. «GÜNER DOĞRULASIN»

The method and the target architecture in this proposal are based on this work.

Why Komtaş

- **Focus:** Komtaş has worked only in the data field for more than 35 years, with more than 250 specialists and 4 offices.
- **Delivered toolset:** the target architecture uses the tools with which the cloud team of Komtaş has already moved an application estate to Kubernetes.
- **Two providers:** Komtaş works with both Google Cloud and Microsoft Azure.
- **From assessment to operation:** assessment, migration, platform operation and cloud consumption are provided by the same organisation (Section 10).

References

Reference projects comparable to the scope of this proposal are listed below. Reference calls with the customers concerned can be arranged on request. «GÜNER DOĞRULASIN»

FILL NOTE — list only references whose use has been approved for this proposal. Do not add customer names or contact persons without their consent.

Organisation	Scope of Work	Contact
«REFERENCE PROJECT»	«REFERENCE PROJECT»	«REFERENCE PROJECT»

Table 13 — Application modernization references of Komtaş.
