CLOUD CHECKUP

Blueprint — internal reference

A Quick Scan · B Full Checkup · Google Cloud and Microsoft Azure · measure → score → roadmap

1 **Positioning and commercial logic**
Package summary, why the package exists commercially, target customers, scope boundary.
p. 2 – 5

2 **Method and dimensions**
Measure → score → roadmap, the five dimensions, scoring model, savings estimate.
p. 6 – 14

3 **Delivery**
Tools per provider, read-only access, Quick Scan and Full Checkup flows, team, sizing and effort.
p. 15 – 20

4 **Outputs, follow-on and status**
Output structure, follow-on map, risks and open points, verification summary.
p. 21 – 24

Package Summary — What, for Whom, When

KOMTAS

A fixed-scope, read-only review of a customer's Google Cloud or Azure estate. Source: internal meeting with Guner Hacioglu (Cloud Solutions), 15.10.2026.

01 · SUMMARY

WHAT IT IS

Read-only review of the cloud estate

cost, identity and access, configuration errors — the three areas audited in the field today

Google Cloud and Azure

one provider or both in one engagement

Measure → score → roadmap

findings with priority, dimension scores, savings range, next steps

No change in the environment

read-only access only; remediation is quoted as a separate project

TWO TIERS

A — Quick Scan

automated scan + findings report

1–2 weeks «GÜNER DOĞRULASIN»

B — Full Checkup

interviews + scan + roadmap

3–4 weeks «GÜNER DOĞRULASIN»

Next step

remediation, landing zone, FinOps, managed cloud service, consumption

BASIS — KNOWN FACTS

- Guner Hacioglu (Cloud Solutions) runs this work in the field today
- Three areas audited today: cost, identity and access, configuration errors
- For customers that use cloud
- Google Cloud and Azure both planned
- Komtaş is a Google Cloud Premier partner
- Azure partnership completed

Status: draft. Built from one meeting. The checklist, tools, effort, report format and customer references of the work done today are not known. Every drafted item carries the orange verification tag and is listed for Guner Hacioglu's review (p. 24).

Commercial Logic — Value Comes from the Service and the Follow-on

internal only

KOMTAS

Internal only. Margin figures never appear in the customer deck or in the proposal template.

LICENCE AND CONSUMPTION MARGIN · INTERNAL

PROVIDER	CONDITION	MARGIN
Google Cloud	Premier partner, base	12%
Google Cloud	with incentives and funds	13–15%
Google Cloud	large deals	~5–6%
Azure	starting level	3%

Thin margin.
Reselling consumption does not carry the customer relationship on its own; in large deals the margin falls to about half of the base.

WHERE THE VALUE IS

Cloud Checkup — paid service

↓

Remediation or landing zone project

↓

FinOps or managed cloud service

↓

Consumption through Komtaş

Each step is a separate sale. The Checkup produces the findings that justify the next one.

THE TRUSTED-ADVISOR DOOR

1. First paid engagement with a new customer, small in effort and risk
2. Komtaş sees the real estate: spend, access and configuration
3. Each finding is tied to a named follow-on (p. 22)
4. The customer gets an independent view before licence or migration decisions

Open: price of the Quick Scan. Whether A is priced at full rate, as an entry offer or as part of a consumption agreement is not decided. Fees are not set in this blueprint.

Target Customers and Triggers

KOMTAS

Who is approached and on what occasion. The profiles and triggers are drafted; they are not drawn from recorded deals.

TARGET CUSTOMER PROFILES «GÜNER DOĞRULASIN»

New customer on GCP or Azure
no Komtaş relationship yet; Checkup as the first engagement

Existing Komtaş consumption customer
spend runs through Komtaş; Checkup opens a service relationship

Customer with fast spend growth
the bill grows faster than use; finance asks for an explanation

Customer before a multi-cloud step
adds Azure to GCP or the reverse; needs one baseline for both

TRIGGERS «GÜNER DOĞRULASIN»

Rising cloud bill
management or finance asks why spend grows

Upcoming audit
internal or external audit asks for access and configuration evidence

New cloud team or provider change
a team inherits an estate it did not build

Merger
two estates need one common view

Multi-cloud move
a second provider is added; policies differ

Security incident concern
after an incident in the company or in the sector

First call. Which provider, how many projects or subscriptions, monthly spend band, is billing export enabled, who can approve read-only access. The answers feed the input form (file 3).

Scope Boundary — What It Is Not

KOMTAS

What the Checkup does not do, and the Komtaş packages it links to without absorbing them.

01 · BOUNDARY

OUT OF SCOPE

- Penetration testing
- Compliance or certification audit (ISO 27001, PCI DSS, BDDK and others)
- Application code review
- Any change in the customer environment — remediation is a separate project
- Licence negotiation
- On-premises systems «GÜNER DOĞRULASIN»
- SaaS application configuration (Google Workspace, Microsoft 365) «GÜNER DOĞRULASIN»

BOUNDARIES TO OTHER PACKAGES

Application Modernization

separate package; moves and modernises applications. The Checkup can name candidate workloads.

Data Modernization / ETL Migration GCP

data platform work. The Checkup looks at cloud infrastructure, not at data models or pipelines.

AI Governance Readiness

governance of AI systems. The Checkup does not assess models or AI use cases.

Remediation project

follow-on that applies the findings; scoped from the Checkup backlog.

Boundary rule. The Checkup reads and reports. It does not fix, certify or test by attack. Anything that changes the environment is quoted as a follow-on.

Method — Measure → Score → Roadmap

KOMTAS

The same three steps in both tiers. A stops at scan evidence; B adds people, process and documents.

02 · METHOD «GÜNER DOĞRULASIN»

Measure

collect evidence

Automated read-only scan: cost, IAM, configuration	A · B
Billing export and Recommender / Advisor data	A · B
Interviews with four teams	B
Process and document review	B

Score

rate and prioritise

Each finding: Critical / High / Medium	A · B
Each dimension: level 1–5	A · B
A: indicative score, scan evidence only	A
B: evidenced score, scan + interview + document	B

Roadmap

decide what to do

Quick-win list	A · B
Savings range	A · B
Target state per dimension	B
Roadmap 0–30 d / 1–3 mo / 3–6 mo, sized backlog	B

Same method, two depths. A gives a findings report in one to two weeks. B adds interviews, process and document review, a target state and a sized roadmap for management.

Five Dimensions — Overview

KOMTAS

Three dimensions follow the areas audited today; two are added in this draft. Detail per dimension on p. 8–12.

02 · FIVE DIMENSIONS «GÜNER DOĞRULASIN»

1 Cost & FinOps

idle resources, rightsizing, commitments, storage tiering, budgets, cost allocation

known area — audited today

2 Identity & Access

privileged roles, broad roles, service account keys, MFA, guests, access review

known area — audited today

3 Configuration & Security Posture

public exposure, encryption, audit logging, posture findings

known area — audited today

4 Resilience & Operations

backup, DR design and test, zones and regions, monitoring, patching

added in draft

«GÜNER DOĞRULASIN»

5 Governance & Tagging

hierarchy, label / tag coverage, policies, naming, environment separation

added in draft

«GÜNER DOĞRULASIN»

THE THREE AREAS AUDITED TODAY → DIMENSIONS

Cost	1
Identity / access	2
Configuration errors	3

added: 4 Resilience & Operations · 5 Governance & Tagging

Per dimension: control areas · evidence source (scan / interview / document) · typical findings with priority · score 1–5 · follow-on

Dimension 1 — Cost & FinOps

known area — audited today

KOMTAS

Where money is spent without use, and whether spend has an owner, a budget and a commitment plan.

CONTROL AREAS «GÜNER DOĞRULASIN»

CONTROL AREA	WHAT IS CHECKED	GOOGLE CLOUD	AZURE	EV.
Idle and orphaned resources	stopped VMs with disks, unattached disks and IPs, old snapshots, empty projects	Recommender (idle), Asset Inventory	Advisor (cost), Resource Graph	S
Rightsizing	VM and database size against observed utilisation	Recommender (machine type)	Advisor (rightsizing)	S
Commitments	coverage and use of commitments against steady usage	CUD analysis, billing export	Reservations, Savings Plans	S · D
Storage tiering and lifecycle	storage class against access pattern; lifecycle rules	Cloud Storage lifecycle	Blob access tiers, lifecycle	S
Budgets and alerts	budgets per project or team; thresholds and recipients	Billing budgets	Cost Management budgets	S · I
Cost allocation	labels / tags on cost lines; showback or chargeback	Billing export to BigQuery	Cost Management, tags	S · I · D

Evidence: S = automated scan · I = interview · D = document review. Quick Scan uses S only; Full Checkup uses S, I and D.

TYPICAL FINDINGS «GÜNER DOĞRULASIN»

High

Compute and disks unused for «NUMBER» days are still billed

High

Steady workloads on on-demand prices; commitment coverage low

Medium

No budget or alert on production projects

Medium

Large share of spend without an owner label

Follow-on. FinOps optimisation project (rightsizing, commitments) · FinOps managed service

Dimension 2 — Identity & Access

known area — audited today

KOMTAS

Who can do what in the estate, how privileged access is protected, and whether rights are reviewed.

CONTROL AREAS «GÜNER DOĞRULASIN»

CONTROL AREA	WHAT IS CHECKED	GOOGLE CLOUD	AZURE	EV.
Privileged roles	number of owner / admin holders at organisation, folder, project or subscription level	IAM policy, Policy Analyzer	Azure RBAC, Entra ID roles	S
Primitive and broad roles	basic roles (Owner, Editor) and wide custom roles in use	IAM Recommender	RBAC at subscription scope	S
Service account keys	user-managed keys, key age, unused accounts and keys	IAM, service account insights	Entra ID app credentials	S
MFA on privileged users	MFA enforced for admin and owner identities	Cloud Identity settings	Entra ID MFA, Conditional Access	S · D
External and guest identities	external domains, guest users, public members	IAM policy, Asset Inventory	Entra ID guest users	S
Access review practice	periodic review of rights; joiner, mover, leaver	—	Entra ID access reviews	I · D

Evidence: S = automated scan · I = interview · D = document review. Quick Scan uses S only; Full Checkup uses S, I and D.

TYPICAL FINDINGS «GÜNER DOĞRULASIN»

Critical

Admin or owner account without MFA

Critical

Owner-level service account key older than «NUMBER» days

High

Basic Editor role granted widely at project level

Medium

No periodic access review

Follow-on. Remediation project · landing zone redesign (identity and role model)

Dimension 3 — Configuration & Security Posture

known area — audited today

KOMTAS

What is exposed to the internet, whether data is encrypted and actions logged, and what the native posture tool reports.

CONTROL AREAS «GÜNER DOĞRULASIN»

CONTROL AREA	WHAT IS CHECKED	GOOGLE CLOUD	AZURE	EV.
Public exposure — storage	buckets and storage accounts open to anonymous access	SCC, Asset Inventory	Defender for Cloud	S
Public exposure — network	external IPs; firewall / NSG rules open to 0.0.0.0/0 on admin ports	VPC firewall rules, SCC	NSG rules, Defender for Cloud	S
Encryption	encryption settings; customer-managed keys where policy requires them	Cloud KMS, SCC	Key Vault, Defender for Cloud	S · D
Logging	audit logs enabled (admin and data access), retention, export	Cloud Audit Logs, log sinks	Activity Log, diagnostic settings	S
Posture findings	open findings in the native posture tool, by severity	Security Command Center	Defender for Cloud	S
Finding handling	how posture findings are triaged, assigned and closed	—	—	I · D

Evidence: S = automated scan · I = interview · D = document review. Quick Scan uses S only; Full Checkup uses S, I and D.

TYPICAL FINDINGS «GÜNER DOĞRULASIN»

Critical

Bucket or storage account with customer data open to the public

Critical

SSH / RDP open to 0.0.0.0/0 on production

High

Data access audit logs disabled on sensitive projects

Medium

Posture tool enabled but findings not triaged

Follow-on. Remediation project · landing zone redesign

Dimension 4 — Resilience & Operations

added in draft

KOMTAS

Whether workloads can be restored and kept running: backup, DR, zone use, monitoring and patching.

CONTROL AREAS «GÜNER DOĞRULASIN»

CONTROL AREA	WHAT IS CHECKED	GOOGLE CLOUD	AZURE	EV.
Backup coverage	which workloads have backup; schedule and retention	Backup and DR, snapshot schedules	Azure Backup, Recovery vaults	S · D
DR design and test	RTO / RPO targets, DR design, date of the last test	—	Azure Site Recovery	I · D
Zone and region use	single-zone production workloads; regional services	Asset Inventory	Resource Graph	S
Monitoring and alerting	alert policies on production; who receives them	Cloud Monitoring	Azure Monitor	S · I
Patching	OS patch status and patch process	VM Manager (OS patch)	Azure Update Manager	S · I

Evidence: S = automated scan · I = interview · D = document review. Quick Scan uses S only; Full Checkup uses S, I and D.

TYPICAL FINDINGS «GÜNER DOĞRULASIN»

High

Production database with no tested restore

High

Production in a single zone with no DR design

Medium

Alerts exist but reach no named recipient

Medium

No regular patch cycle on VMs

Follow-on. Backup / DR project · managed operations

Dimension 5 — Governance & Tagging

added in draft

KOMTAS

Whether the estate is organised so that ownership, environment and policy can be read from the structure itself.

CONTROL AREAS «GÜNER DOĞRULASIN»

CONTROL AREA	WHAT IS CHECKED	GOOGLE CLOUD	AZURE	EV.
Resource hierarchy	organisation, folders, projects / management groups, subscriptions; fit to the organisation	Resource Manager, Asset Inventory	Management groups, Resource Graph	S · D
Label / tag coverage	share of resources and spend with owner, environment, cost centre tags	Asset Inventory, billing export	Resource Graph, Cost Management	S
Policies	organisation policy constraints and Azure Policy assignments, compliance	Organization Policy	Azure Policy	S
Naming	a naming standard exists and is followed	Asset Inventory	Resource Graph	S · D
Environment separation	production and non-production separated at project or subscription level	Resource Manager, Shared VPC	Subscriptions, VNet peering	S · I

Evidence: S = automated scan · I = interview · D = document review. Quick Scan uses S only; Full Checkup uses S, I and D.

TYPICAL FINDINGS «GÜNER DOĞRULASIN»

High

Production and test in the same project or subscription

High

No policy restricting public IPs or resource locations

Medium

Less than «NUMBER»% of spend carries an owner tag

Medium

No naming standard; names do not show owner or environment

Follow-on. Tagging and policy setup · landing zone

Scoring Model — Levels, Priorities, Indicative vs Evidenced

KOMTAS

Each dimension gets one level from 1 to 5. Each finding gets one priority. The level descriptions and the priority rule are drafts.

MATURITY LEVELS «GÜNER DOĞRULASIN»

LEVEL	NAME	DESCRIPTION
1	Ad hoc	no defined practice; depends on individuals; problems found by chance
2	Reactive	some controls exist; action taken after a problem or a high bill
3	Defined	practice written and applied to most of the estate; owners named
4	Managed	controls applied across the estate and monitored with alerts and reports
5	Optimised	controls automated as policy, reviewed and improved on measured results

Dimension score: set by the reviewer against the level descriptions; the report lists the findings and evidence behind it.
«GÜNER DOĞRULASIN»

FINDING PRIORITY «GÜNER DOĞRULASIN»

PRIORITY	RULE	EXAMPLES
Critical	active exposure or privileged-access risk	public data storage, admin without MFA, long-lived owner keys
High	material cost waste or security weakness without immediate exposure	low commitment coverage, broad Editor roles, no DR design
Medium	hygiene or good-practice gap	missing tags, no naming standard, untriaged low findings

Quick Scan — indicative.
Scores rest on scan evidence only and are labelled indicative in the report. Process maturity (reviews, tests, ownership) cannot be seen in a scan.

Full Checkup — evidenced.
Scores combine scan, interview and document evidence. Each score cites its evidence and comes with a target level.

Savings Estimate — A Range, Not a Commitment

KOMTAS

Built from read-only cost data and the providers' own recommendations. Given as a monthly range and as a share of monthly spend.

02 · SAVINGS ESTIMATE «GÜNER DOĞRULASIN»

INPUTS

Billing export
BigQuery billing export (GCP), Cost Management exports (Azure): monthly baseline by service and project

Recommender / Advisor
the providers' cost recommendations: idle resources, unattached disks and IPs

Rightsizing
machine and database size against observed utilisation

Commitment analysis
steady usage against CUD (GCP) or Reservations and Savings Plans (Azure)

STEPS

1. **Baseline**
   monthly spend by service, project, environment
2. **Collect savings items**
   from the four inputs, one line per resource or group
3. **Remove overlaps**
   e.g. rightsizing and commitment on the same resource
4. **Give low and high value**
   conservative and full adoption → range

OUTPUT IN THE REPORT

mock

USD «NUMBER» – «NUMBER» / month

«NUMBER» – «NUMBER»% of monthly spend

- A range, never a single promised amount
- Confirmed only in the remediation project
- No billing export → range limited to recommendation data
- Same method in A and B

Not a commitment. The range is an estimate from read-only data. Savings are confirmed when changes are made in the remediation project; the Checkup report says so in the same sentence as the figure.

Technology Mapping — Google Cloud and Azure

KOMTAS

Native provider tools for each purpose. The draft uses native tools only, so the customer needs no extra licence.

PURPOSE → NATIVE TOOL PER PROVIDER «GÜNER DOĞRULASIN»

PURPOSE	GOOGLE CLOUD	MICROSOFT AZURE	DIMENSION
Cost data	Billing export to BigQuery	Cost Management + Billing (exports)	1 Cost
Cost recommendations	Recommender (idle, rightsizing, CUD)	Azure Advisor (cost)	1 Cost
Identity and access analysis	IAM, Policy Analyzer, IAM Recommender	Entra ID, Azure RBAC	2 Identity
Security posture	Security Command Center	Microsoft Defender for Cloud	3 Configuration
Resource inventory	Cloud Asset Inventory	Azure Resource Graph	all
Policy	Organization Policy	Azure Policy	5 Governance
Operations	Cloud Monitoring, Backup and DR	Azure Monitor, Azure Backup	4 Resilience

Open: tools used today. Whether the work done today uses only native tools, own scripts or a third-party scanner is not known. The table is replaced by the actual tool set after review.

Required Read-Only Access

KOMTAS

Roles requested from the customer. No write role is requested and no change is made in the customer environment.

03 · ACCESS

Google Cloud

«GÜNER DOĞRULASIN»

SCOPE: organisation or folder level

roles/viewer	read resource configuration
roles/iam.securityReviewer	read IAM policies
roles/billing.viewer	read billing and cost data
Cloud Asset Viewer	read the asset inventory

Microsoft Azure

«GÜNER DOĞRULASIN»

SCOPE: management group or subscription level

Reader	read resources
Security Reader	read Defender for Cloud and security settings
Cost Management Reader	read cost data
Entra ID directory read	read users, groups, roles

Read only

no write role; nothing is changed, created or deleted

Named and time-bound «GÜNER DOĞRULASIN»

accounts created by the customer for named Komtaş staff; removed at the end

Approval first

security team approval can need lead time; request sent at contract signature

Billing export. If billing export is not enabled, the savings range is built from recommendation data only (risk on p. 23). Ask at the first call.

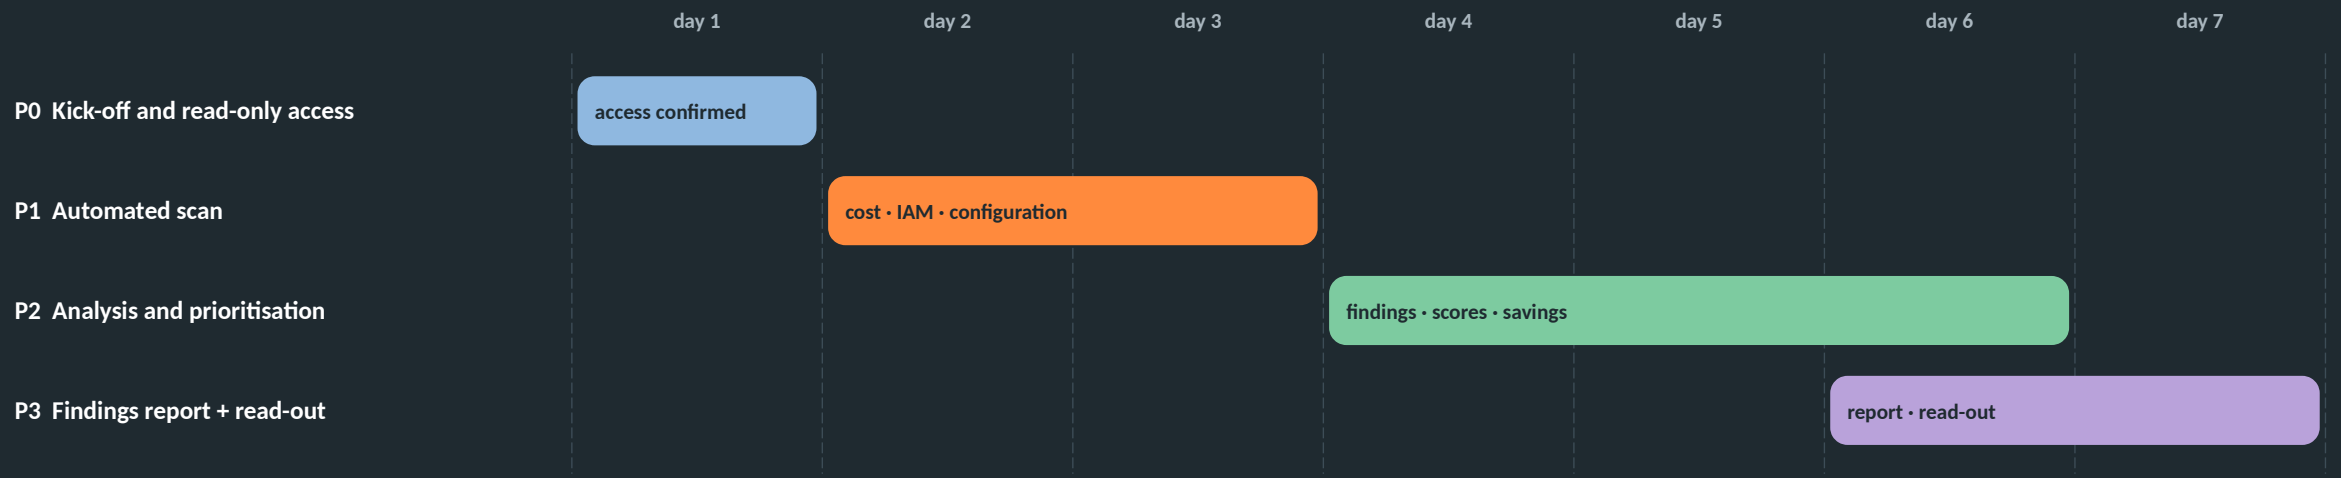

A — Quick Scan: Flow and Timeline

KOMTAS

Automated scan and findings report. No interviews; the customer joins the kick-off and the read-out.

03 · TIER A

PLAN · BAND M, 7 WORKING DAYS «GÜNER DOĞRULASIN»

Band S 5 working days, band L 10 working days. Access approval lead time comes before day 1.

OUTPUTS

Findings list
each finding with dimension, priority and recommendation

Indicative scores
five dimensions, level 1–5, scan evidence only

Savings range
monthly range and share of spend

Quick-win list
actions possible within 30 days

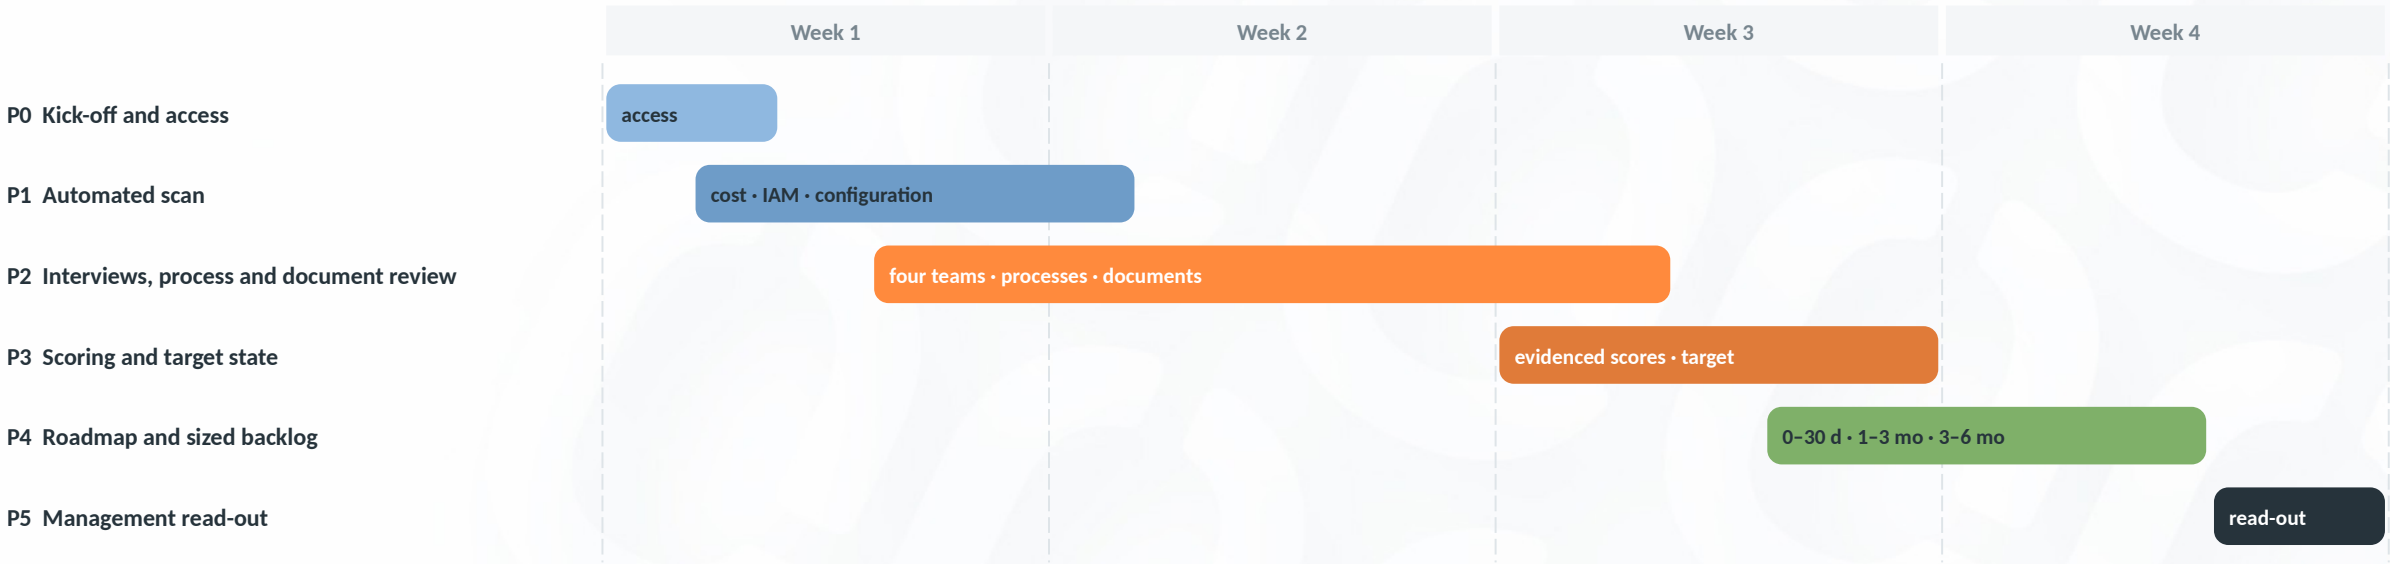

Entry tier. A is the short first engagement. Its findings and quick wins are the basis for offering B or a follow-on project directly.

B — Full Checkup: Flow and Timeline

KOMTAS

Interviews, scan and roadmap. Adds process and document evidence, a target state per dimension and a sized backlog.

PLAN · BAND M, 20 WORKING DAYS «GÜNER DOĞRULASIN»

Interviews «GÜNER DOĞRULASIN»

- platform / infrastructure
- security
- finance / FinOps
- operations

Process review «GÜNER DOĞRULASIN»

- budget ownership
- access review cadence
- DR tests
- change process

Document review «GÜNER DOĞRULASIN»

- architecture diagrams
- security and access policies
- DR plans
- runbooks

OUTPUTS

- Scored dimensions with evidence
- Target state per dimension
- Roadmap 0–30 d / 1–3 mo / 3–6 mo
- Effort-sized remediation backlog
- Management read-out

Team and Roles

KOMTAS

Three roles in both tiers; B adds a part-time engagement lead. Effort split by role is not yet known.

ROLES «GÜNER DOĞRULASIN»

ROLE	RESPONSIBILITY	A	B
Cloud Architect (lead)	technical lead; scan set-up; dimensions 4 and 5; roadmap and backlog	lead	lead
Cloud Security Engineer	dimensions 2 and 3; posture findings; priority of security findings	●	●
FinOps Analyst	dimension 1; billing export analysis; savings range	●	●
Engagement Lead (part time)	scope, customer contact, interview plan, management read-out	—	part time

● takes part lead accountable for delivery — not staffed

CUSTOMER-SIDE CONTACTS «GÜNER DOĞRULASIN»

A and B
cloud platform owner: access approval, kick-off, read-out; finance contact for billing export

B adds
security lead, operations lead and finance / FinOps owner: one interview each

B management
a sponsor who receives the management read-out and owns the roadmap decision

Capacity risk.
Guner Hacioglu runs this work today. Selling the package at volume needs delivery capacity in the Cloud team planned first (p. 23).

Staffing facts to collect.
People able to deliver a GCP Checkup: «NUMBER» · an Azure Checkup: «NUMBER» · relevant certifications: «NUMBER»

Sizing — Drivers, S / M / L Bands and Effort

draft — no recorded effort

KOMTAS

Drivers come from the input form (file 3). Durations in working days, effort in person-days (pd).

SIZING DRIVERS «GÜNER DOĞRULASIN»

DRIVER	S	M	L
Cloud providers	1	1	2 (GCP + Azure)
Projects / subscriptions	≤10	11–50	>50
Monthly cloud spend	<USD 20k	USD 20–100k	>USD 100k
Environments	≤2	3	>3
Users + service accounts	≤200	200–1,000	>1,000

Band rule. «GÜNER DOĞRULASIN»
The band is the highest band reached by at least three drivers. A driver at L also counts as reaching M.

Example.
2 providers (L), 30 projects (M), USD 150k / month (L), 4 environments (L), 800 identities (M) → three drivers at L → band L.

DURATION / EFFORT «GÜNER DOĞRULASIN»

TIER	S	M	L
A Quick Scan	5 working days ~8 pd	7 working days ~12 pd	10 working days ~18 pd
B Full Checkup	15 working days ~25 pd	20 working days ~35 pd	20+ working days ~50 pd

Calibration.
No recorded effort exists. Bands and person-days are updated with Guner Hacioglu's data from past checkups: duration, person-days, estate size.

HOW THE BAND IS USED

1. The input form (file 3) records the five drivers
2. The band rule gives S, M or L
3. Duration and effort are read from the table above
4. Effort goes into the proposal template (file 4)

Output Structure — Findings, Scorecard, Savings, Roadmap

KOMTAS

Four output blocks. A delivers the first three (scores indicative); B delivers all four with evidenced scores.

04 · OUTPUTS «GÜNER DOĞRULASIN»

Findings list

A · B

ID | Dimension | Finding | Priority | Evidence | Recommendation | Effort size | Follow-on

«...» · «...» · Critical · S

Scorecard

A · B

five dimensions, current level 1–5; B adds target level and evidence references

Savings range

A · B

monthly USD range and share of spend, split by lever (p. 14)

USD «NUMBER» – «NUMBER» / month

Roadmap and backlog

B

0–30 days · quick wins | 1–3 months | 3–6 months

A gives the quick-win list only

Formats. A: findings report (document) and findings list (spreadsheet). B: the same, plus scorecard, roadmap and a management read-out deck. «GÜNER DOĞRULASIN»

Follow-on Map — From Finding to Project

KOMTAS

Each finding area leads to a named next step. In the proposal template this is the separate section 'Next step', without margin figures.

FINDING AREA → NEXT STEP «GÜNER DOĞRULASIN»

FINDING AREA	FOLLOW-ON PROJECT	OPERATIONS / SERVICE
1 Cost & FinOps	FinOps optimisation project (rightsizing, commitments)	FinOps managed service
2 Identity & Access	remediation project; landing zone redesign	managed cloud service
3 Configuration & Security	remediation project; landing zone redesign	managed cloud service
4 Resilience & Operations	backup / DR project	managed operations
5 Governance & Tagging	tagging and policy setup; landing zone	managed cloud service
Overall	—	managed cloud service and consumption through Komtaş

In the proposal template.
Section 'Next step': follow-on project, operations, consumption. No margin figures, no prices.

From backlog to proposal.
Each roadmap item sized S / M / L in B becomes a line of the follow-on proposal.

Risks and Open Points

KOMTAS

Known risks of the package as drafted, and the questions that stay open after the 15.10.2026 meeting.

RISKS

RISK	EFFECT	HANDLING
No recorded effort	bands and person-days may be wrong	track the first deliveries; update bands with Guner Hacioglu's data
Checklist and report template unknown	draft may differ from field practice	review of dimensions and control areas through the sidecar list
Billing export may be missing	savings range limited	ask at the first call; enable at kick-off
Access approvals can delay start	timeline slips before day 1	request with the signed order; plan starts at access date
One-person dependency on Guner Hacioglu	delivery capacity in the Cloud team	second person joins the first engagements; capacity plan

OPEN POINTS

- Price approach for A: full rate, entry offer or part of a consumption agreement
- Tools used today: native tools, own scripts or a third-party scanner
- Report template and an anonymised sample from past work
- Reference projects that can be named: «REFERENCE PROJECT»

Verification Summary

KOMTAS

Draft for Guner Hacioglu's review. Every drafted statement carries the orange tag GUNER DOGRULASIN and has one question in the sidecar file.

05 · VERIFICATION

TAGS IN THIS FILE
