KOMTAS

CLOUD CHECKUP

Cost, identity and access, configuration — on Google Cloud and Microsoft Azure

A read-only assessment of a cloud environment: measure, score, and a prioritised roadmap

1 **Why a checkup**
Common problems in cloud use, and what Cloud Checkup is. p. 2 – 3

2 **Scope and method**
The dimensions, measure → score → roadmap, and the two service levels. p. 4 – 6

3 **How it runs**
Work flow, read-only access, deliverables and a sample output. p. 7 – 10

4 **Coverage and next step**
Google Cloud and Azure, what comes after the Checkup, and how it starts. p. 11 – 13

Common Problems in Cloud Use

KOMTAS

Cloud environments grow quickly; control often grows more slowly. The same questions come up across organisations, whichever provider is used.

01 · COMMON PROBLEMS

The bill grows faster than use

- Why did this month's bill go up?
- Which team or product is behind the spend?
- Are budgets and alerts in place?

Spend is seen after the fact, not managed

Cost

Paying for what is not used

- Are there idle or orphaned resources?
- Are machines and databases sized to their load?
- Are commitments used where load is steady?

Capacity is paid for but not used

Cost

Too much access in too many hands

- How many users hold owner or admin roles?
- Are service account keys old or unused?
- Do privileged users have MFA?

Access is granted once and never reviewed

Identity and access

Exposed by a single setting

- Is any storage open to the internet?
- Are firewall rules open to 0.0.0.0/0?
- Are audit logs switched on?

One setting can expose data

Configuration

Recovery that has not been tested

- Do backups cover the critical systems?
- When was the DR plan last tested?
- Are workloads spread across zones?

Recovery is assumed, not proven

Resilience «GÜNER DOĞRULASIN»

No clear owner for a resource

- Who owns this project or subscription?
- Are resources tagged by team and environment?
- Are policies applied across the organisation?

Cost and risk cannot be assigned

Governance «GÜNER DOĞRULASIN»

What Cloud Checkup Is

KOMTAS

A time-boxed assessment of a Google Cloud or Azure environment. It measures the current state, scores it and turns the findings into a prioritised roadmap.

02 · WHAT IT IS

THREE CORE AREAS

Cost

where money is spent, and where it is wasted

Identity and access

who can do what, and with which privileges

Configuration errors

settings that create risk or exposure

FOR WHOM

Organisations that run workloads on Google Cloud, Microsoft Azure, or both.

WHAT IT PRODUCES

Measured findings → Scores → Prioritised roadmap

Read-only
The Checkup reads configuration, access and billing data. No change is made in the environment; remediation is a separate project. «GÜNER DOĞRULASIN»

WHEN IT IS USEFUL «GÜNER DOĞRULASIN»

- The cloud bill is rising
- An audit is coming up
- A new cloud team, or a change of provider
- A merger or an acquisition
- A move to more than one cloud
- Concern about a security incident

WHAT IT IS NOT

- Not a penetration test
- Not a compliance or certification audit (ISO 27001, PCI DSS, BDDK)
- Not an application code review
- Not a licence negotiation; on-premises systems are not covered
- SaaS settings (Google Workspace, Microsoft 365) not covered «GÜNER DOĞRULASIN»

Five Dimensions

KOMTAS

The three core areas are extended with resilience and governance. Each dimension has its own control areas and is scored separately.

02 · FIVE DIMENSIONS

«GÜNER DOĞRULASIN»

1

Cost & FinOps

- Idle and orphaned resources
- Rightsizing
- Commitments (CUD, Reservations, Savings Plans)
- Storage tiering and lifecycle
- Budgets and alerts
- Cost allocation

«GÜNER DOĞRULASIN»

2

Identity & Access

- Number of owner and admin roles
- Broad and primitive roles
- Service account key age and use
- MFA on privileged users
- External and guest identities
- Access review practice

«GÜNER DOĞRULASIN»

3

Configuration & Security Posture

- Public storage and IP exposure
- Firewall / NSG open to 0.0.0.0/0
- Encryption settings
- Audit logs enabled
- Posture findings (SCC, Defender for Cloud)

«GÜNER DOĞRULASIN»

4

Resilience & Operations

- Backup coverage
- DR design and test
- Multi-zone and multi-region use
- Monitoring and alerting
- Patching

«GÜNER DOĞRULASIN»

5

Governance & Tagging

- Resource hierarchy
- Label and tag coverage
- Org policies / Azure Policy
- Naming
- Environment separation

«GÜNER DOĞRULASIN»

Core and extended. Cost, identity and access, and configuration are the core of every Checkup. Resilience and governance are added so that the roadmap also addresses the causes behind the findings.

Method: Measure → Score → Roadmap

KOMTAS

Three steps. Findings are measured with evidence, scored per dimension, and put in order in a roadmap.

02 · METHOD

Measure

what is in place today

«GÜNER DOĞRULASIN»

- Read-only scan of configuration, access and billing
- Interviews with platform, security, finance, operations
- Review of existing documents

Score

how mature each dimension is

- Each dimension scored 1–5
- Each finding given a priority
- Savings estimated as a range

Roadmap

what to fix, and in which order

«GÜNER DOĞRULASIN»

- Quick wins: 0–30 days
- Next: 1–3 months
- Then: 3–6 months

Indicative or evidenced. Quick Scan scores are indicative (scan evidence only). Full Checkup scores combine scan, interview and document evidence. «GÜNER DOĞRULASIN»

SCORING LEVELS PER DIMENSION

«GÜNER DOĞRULASIN»

1	**Ad hoc**	no standard; depends on individuals
2	**Reactive**	problems are fixed after they occur
3	**Defined**	standards are set and partly applied
4	**Managed**	standards are applied and monitored
5	**Optimised**	automated and reviewed continuously

FINDING PRIORITY

«GÜNER DOĞRULASIN»

Critical	Active exposure or privileged-access risk, e.g. public data storage, admin without MFA, long-lived owner keys
High	Material cost waste, or a security weakness without immediate exposure
Medium	Hygiene or good-practice gap

Two Service Levels: Quick Scan and Full Checkup

KOMTAS

Quick Scan gives a fast, scan-based view. Full Checkup adds interviews, process and document review, and a roadmap that management can act on.

03 · SERVICE LEVELS

A Quick Scan

automated scan · 1–2 weeks

- Kick-off and read-only access
- Automated scan of all dimensions
- Analysis and prioritisation
- Findings report and read-out

EVIDENCE

scan

OUTPUT

Prioritised findings · indicative scores · savings range · quick-win list

«GÜNER DOĞRULASIN»

B Full Checkup

interviews + scan + roadmap · 3–4 weeks

- Everything in Quick Scan
- Interviews: platform, security, finance / FinOps, operations
- Process review: budget ownership, access reviews, DR tests, changes
- Document review
- Target state per dimension

EVIDENCE

scan · interview · document

OUTPUT

Evidenced scores · remediation roadmap in three horizons · effort-sized backlog · read-out to management

«GÜNER DOĞRULASIN»

HOW TO CHOOSE

Quick Scan fits when
a fast, fact-based view is needed, for example before a budget round or an audit.

Full Checkup fits when
decisions on structure, teams or providers are coming, and management needs a roadmap.

Step by step
A Quick Scan can be followed by a Full Checkup; the scan results are reused.

«GÜNER DOĞRULASIN»

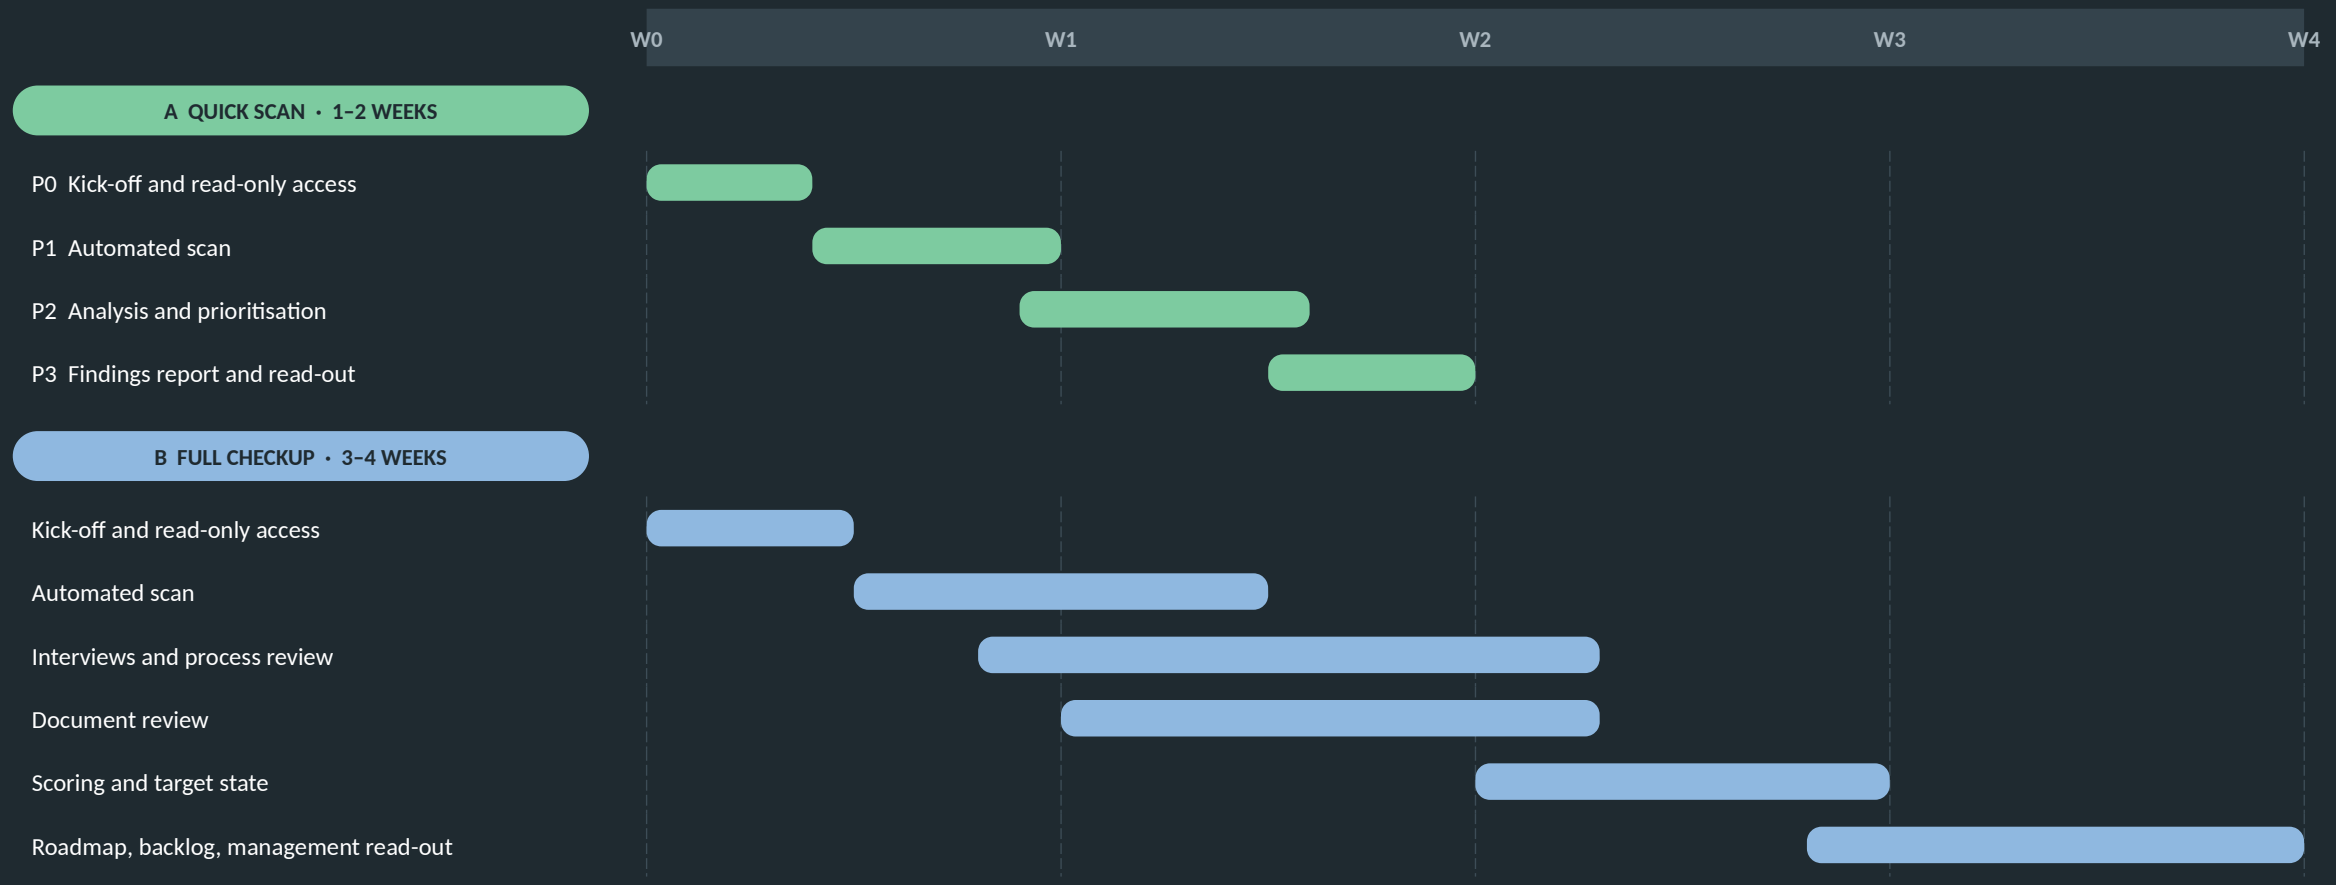

Work Flow and Timeline

KOMTAS

Indicative durations. The exact plan is set after scoping; it depends mainly on the size of the environment and on how quickly read-only access is approved.

03 · WORK FLOW

«GÜNER DOĞRULASIN»

What sets the duration. Number of cloud providers · projects / subscriptions · monthly cloud spend · environments · users and service accounts «GÜNER DOĞRULASIN»

The start date depends on read-only access being approved; the request is best made right after the scoping call.

Read-Only Access and What the Customer Provides

KOMTAS

The roles requested for the Checkup, and what is needed from the customer before the start.

READ-ONLY ROLES REQUESTED

«GÜNER DOĞRULASIN»

PROVIDER	ROLE	LEVEL	USED TO READ
Google Cloud	**roles/viewer**	organisation or folder	resource configuration
	roles/iam.securityReviewer	organisation or folder	IAM policies
	roles/billing.viewer	billing account	billing and cost data
	Cloud Asset Viewer	organisation or folder	asset inventory
Microsoft Azure	**Reader**	management group or subscription	resource configuration
	Security Reader	management group or subscription	security posture
	Cost Management Reader	management group or subscription	cost data
	Entra ID directory read	tenant	users, groups, roles

Roles are granted through the customer's own approval process. None of them allows a change to resources.

WHAT THE CUSTOMER PROVIDES

«GÜNER DOĞRULASIN»

A coordinator
single contact for access, meetings and documents

Approval for read-only access
the roles on the left, at the agreed level

Scope list
projects / subscriptions and environments in scope

Billing export, if available
BigQuery export on GCP, Cost Management export on Azure

Interview slots (Full Checkup)
platform, security, finance and operations teams

Existing documents (Full Checkup)
architecture, DR plans, access reviews, policies

Without a billing export the Checkup still runs, but the savings range is narrower, because it is then based on provider recommendations only.

Deliverables

What the customer receives at the end of each service level. A = Quick Scan, B = Full Checkup.

KOMTAS

03 · DELIVERABLES

«GÜNER DOĞRULASIN»

Findings list

A B

Every finding, in one list ordered by priority.

- dimension and priority
- evidence: scan, interview or document
- recommended action and horizon

Dimension scorecard

A B

One score of 1–5 per dimension.

- indicative in Quick Scan
- evidenced in Full Checkup
- target state per dimension (Full Checkup)

Savings range

A B

An estimate, not a commitment. «GÜNER DOĞRULASIN»

- monthly amount, and % of monthly spend
- billing data and provider recommendations
- rightsizing and commitment analysis

Quick-win list

A B

Low-effort actions for the first 30 days.

- taken directly from the findings
- each with a recommended action
- can start before a larger project

Remediation roadmap

B

Target state and the actions to reach it.

- 0–30 days: quick wins
- 1–3 months
- 3–6 months

Effort-sized backlog

B

Remediation items ready to be planned.

- indicative effort per item
- grouped by dimension
- input for a remediation project

Read-out. Quick Scan ends with a read-out to the technical team; Full Checkup ends with a read-out to management. The savings range is confirmed in the remediation project, not in the Checkup. «GÜNER DOĞRULASIN»

Sample Output View

KOMTAS

Illustrative layout of the scorecard and the findings list. All values are placeholders; real values come from the customer's environment.

DIMENSION SCORECARD

Cost & FinOps	1	2	3	4	5	«SCORE»
Identity & Access	1	2	3	4	5	«SCORE»
Configuration & Security	1	2	3	4	5	«SCORE»
Resilience & Operations	1	2	3	4	5	«SCORE»
Governance & Tagging	1	2	3	4	5	«SCORE»

Scale: 1 Ad hoc · 2 Reactive · 3 Defined · 4 Managed · 5 Optimised

Critical

«NUMBER»

findings

High

«NUMBER»

findings

Medium

«NUMBER»

findings

SAVINGS RANGE

«AMOUNT» – «AMOUNT» / month

«NUMBER» – «NUMBER» % of monthly spend.
An estimate, not a commitment; confirmed in the remediation project.

FINDINGS LIST · EXCERPT

ILLUSTRATIVE · NOT REAL DATA

«GÜNER DOĞRULASIN»

#	PRIORITY	DIMENSION	FINDING	EVIDENCE	RECOMMENDED ACTION	HORIZON
1	Critical	Configuration	«FINDING»	scan · «RESOURCE»	«RECOMMENDED ACTION»	0–30 days
2	Critical	Identity & Access	«FINDING»	scan · «RESOURCE»	«RECOMMENDED ACTION»	0–30 days
3	High	Cost & FinOps	«FINDING»	billing data	«RECOMMENDED ACTION»	1–3 months
4	Medium	Governance & Tagging	«FINDING»	scan · «RESOURCE»	«RECOMMENDED ACTION»	3–6 months

Google Cloud and Azure Coverage

KOMTAS

The same dimensions on both providers, checked with each provider's own tools and data.

04 · COVERAGE

DIMENSION · PROVIDER TOOLS «GÜNER DOĞRULASIN»	**Google Cloud** Komtaş is a Google Cloud Premier partner	**Microsoft Azure** Komtaş has completed its Azure partnership
Cost & FinOps	Billing export to BigQuery, Recommender, committed use discounts (CUD)	Cost Management + Billing, Azure Advisor, Reservations and Savings Plans
Identity & Access	IAM, Policy Analyzer, IAM recommender	Entra ID, Azure role assignments
Configuration & Security	Security Command Center, Cloud Asset Inventory	Microsoft Defender for Cloud, Azure Resource Graph
Resilience & Operations	Cloud Asset Inventory, Recommender	Azure Advisor, Azure Resource Graph
Governance & Tagging	Resource hierarchy, organisation policies, Cloud Asset Inventory	Management groups, Azure Policy, Azure Resource Graph

Both providers in one Checkup. Where both are used, each is scanned with its own tools, and the results are brought together in one scorecard and one roadmap. «GÜNER DOĞRULASIN»

After the Checkup

KOMTAS

The Checkup ends with a roadmap. Each step after it is a separate decision and can be planned on its own.

04 · AFTER THE CHECKUP

«GÜNER DOĞRULASIN»

FINDINGS IN	POSSIBLE NEXT STEP
Cost & FinOps	**FinOps optimisation project and FinOps managed service** rightsizing, commitment planning, budgets, continuous cost follow-up
Identity & Access · Configuration	**Remediation project and landing zone redesign** priority findings fixed; a target structure for identities, networks and policies
Resilience & Operations	**Backup / DR project and managed operations** backup coverage, DR design and test, monitoring
Governance & Tagging	**Tagging and policy setup, landing zone** hierarchy, tags, naming and policies applied across the estate
Overall	**Managed cloud service** ongoing operation of the environment, and cloud consumption through Komtaş

BOUNDARIES WITH OTHER SERVICES

Application Modernization
a separate service that moves applications; the Checkup can point out candidates.

Data platform modernisation
data models and pipelines are covered there; the Checkup looks at cloud infrastructure.

About Komtaş, and the Next Step

Who runs the Checkup, and what is needed to start.

KOMTAS

05 · ABOUT KOMTAŞ AND NEXT STEP

WHY KOMTAŞ

Google Cloud Premier partner
Komtaş is a Google Cloud Premier partner.

Azure partnership
The Azure partnership has been completed; the Checkup covers both providers.

Cloud and data in one team
Cloud findings can be taken forward together with data and analytics work.

Measure, score, roadmap
Findings are measured with evidence and put in order of priority.
