KOMTAS

DATA PLATFORM OPERATIONS SUPPORT

Operations support for data warehouse, ETL and BI environments: health check, monitoring, incident, change, performance and capacity management, expert resources

Start with a Platform Health Check, hand over operations in a transition, then run the service every month under an agreed SLA

1 **The challenge**
Symptoms, and what the service covers. — p. 2 – 3

2 **How it works**
Health Check, health score, transition, service models, modules, SLA, monitoring. — p. 4 – 10

3 **Working together**
Three tiers and the timeline. — p. 11

4 **Experience and next step**
References, accelerators, customer inputs, about Komtaş, next step. — p. 12 – 14

Symptoms: When the Data Platform Needs Steady Operation

KOMTAS

Data warehouse, ETL and BI environments grow over the years. Without steady operation, failures, delays and dependence on a few people follow.

01 · SYMPTOMS

«DIGITALLENCY DOĞRULASIN»

Failed loads

Nightly loads fail or finish late; reports open with old data or with no data.

Slow jobs and reports

Run times grow with data volume; load windows are missed at month end.

Key-person risk

Only one or two people know how the platform runs and how failed jobs are restarted.

Vendor change

The current support contract is ending, or the support vendor is being replaced.

Undocumented environments

Jobs, schedules and dependencies are not written down; every change carries risk.

Problems found by users

Failures are noticed by business users before the operations team sees them.

Audit findings

Audits raise points on access, change control or operations records.

End of life or migration

A platform version reaches end of support, or a migration needs a stable run in the meantime.

WHAT THE SERVICE CHANGES

Measured health
score per module, with findings

Monitoring first
alerts before users notice

Agreed SLA
priorities, targets, escalation

Shared knowledge
runbooks instead of individuals

Monthly report
SLA, trends, improvement backlog

What the Service Covers

KOMTAS

Day-to-day operation of data warehouse, ETL and BI environments, delivered as five core services across the modules in scope.

02 · SCOPE

CORE SERVICES

«DIGITALLENCY DOĞRULASIN»

Incident management
Failed loads, jobs, refreshes and reports restored within agreed priority targets.

Change and minor enhancement
Small changes to jobs, models and reports from a monthly pool.

Performance management
Slow jobs, queries and reports found, analysed and tuned.

Capacity management
Space, workload and growth tracked; action taken before limits are reached.

Reporting
Monthly SLA report, trends and an improvement backlog.

OPTIONAL

- Problem management
- Release support
- On-call

MODULES

Informatica
PowerCenter and IDMC jobs, monitoring, upgrades

Teradata
Workload, tuning, space, statistics

BI
Power BI, Qlik, SAP BusinessObjects

DWH
Load chains, model changes, data quality checks

OUT OF SCOPE

«DIGITALLENCY DOĞRULASIN»

- Infrastructure and hardware
- Database administration (DBA)
- Licence management
- Operating system administration
- Network
- New development projects

One service for several platforms. Modules are selected during the Health Check. Where several run services are in place, for example for analytics, privacy or master data, they can be brought under this service with one SLA and one monthly report.

Platform Health Check: Approach

KOMTAS

Five phases from kick-off to an operating model proposal. The Health Check covers the modules in scope: Informatica, Teradata, BI and DWH.

03 · HEALTH CHECK

«DAMALINK DOĞRULASIN»

P0 Kick-off

scope and access

- Modules in scope
- Access to repositories and logs
- Interview plan
- Requirement document

P1 Investigate

inventory and interviews

- Environments, servers, versions
- Workflows, jobs, reports, users
- Schedules and peak load
- Incident history, questionnaires

P2 Assess

measure against standards

- Standards queries
- Performance control points
- Monitoring rule scan
- Deployment, security, HA/DR

P3 Report

findings and score

- Findings with criticality
- Recommendation per finding
- Health score per module
- Quick wins

P4 Operating model

proposal for operation

- Service model and SLA
- Support window and team
- Transition plan
- Migration readiness note

CHECKS USED IN P1 AND P2

Questionnaires

Developer and operator questions: development, restart procedures, versioning.

Standards queries

Operational and governance checks run on the repositories.

Performance points

Busy percentages, caches, commit interval, pushdown, buffers.

Deployment checklist

Mapping, transformation, workflow and session checks; unit test evidence.

Security and HA/DR

Users, groups, roles, LDAP; high availability and recovery.

Evidence before opinion. Findings are based on repository queries, logs and interviews. Each finding has a criticality and a recommendation, and feeds the operating model proposal.

Health Score: An Illustrative Example

KOMTAS

Example output of the Health Check for one module. Each category carries a weight; the weighted result is a score out of 5.

04 · HEALTH SCORE

ILLUSTRATIVE EXAMPLE

Invented values for illustration, not results from a customer. Category weights are those of the scoring model.

SCORING MODEL · MODULE: INFORMATICA

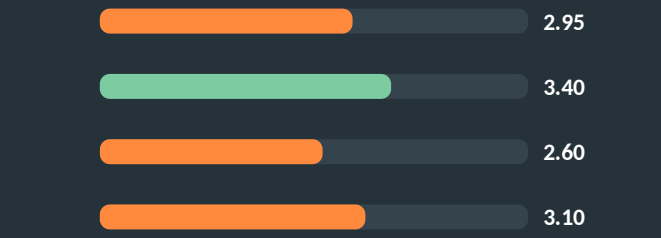

«DAMALINK DOĞRULASIN»

Category	Weight	Score (0 – 5)	Weighted
Architecture	10	3.5	0.35
Development	20	3.0	0.60
Standards	20	2.5	0.50
Deployment	10	2.0	0.20
Performance	10	3.0	0.30
Stability and maintenance	20	3.5	0.70
Security and user management	10	3.0	0.30
Health score	**100**		**2.95 / 5**

WHAT THE QUESTIONS COVER

- Best practice
- Performance
- Stability
- Security
- Infrastructure

HEALTH SCORE PER MODULE

EXAMPLE FINDINGS

- **HIGH** — Workflows failing more than twice a week, restarted by hand without a written procedure.
- **HIGH** — No checks before deployment to production; objects moved by export and import.
- **MEDIUM** — Pushdown enabled but not used; lookup caches switched off on large tables.
- **LOW** — Naming standards applied in part; descriptions missing on most mappings.

Quick wins: daily repository checks, a restart runbook for the most frequent failures, alerts on zero-row loads.

How the score is read. Questions in each category are scored from 0 to 5 using interviews, repository queries and logs. The score sets priorities and is measured again after transition to show the change.

Transition: Handing Over Operations

KOMTAS

A one-time, fixed-fee step that moves operations from the current team or vendor to Komtaş, with a shadow period before full handover.

05 · TRANSITION

«DIGITALLENCY DOĞRULASIN»

1

Knowledge transfer

Sessions with the current team or vendor, recorded and checked against the inventory.

2

Runbooks

Operations documents for daily checks, restarts, deployments and known errors.

3

Monitoring set-up

Alerts and dashboards per module; the PowerCenter accelerator where Informatica is in scope.

4

SLA baseline

Failure rates, run times and ticket volumes measured before targets apply.

5

Ticket flow

Ticket channel, priority matrix and escalation matrix agreed and tested.

6

Access and tooling

Accounts, remote access, ticket tool and monitoring access approved.

SHADOW PERIOD AND HANDOVER

«DIGITALLENCY DOĞRULASIN»

Shadow

Komtaş works alongside the current team for «NUMBER» weeks.

Reverse shadow

Komtaş runs operations; the current team checks and supports.

Handover sign-off

Transition accepted by the customer.

Operate

Monthly service under the agreed SLA.

Optional line «OPTIONAL». A platform move or version upgrade during transition, for example moving Informatica servers or upgrading to a new version, planned and tested as a separate line.

SLA starts from a measured baseline. Service targets apply after handover sign-off and are based on the baseline measured during transition, not on estimates.

Three Service Models

KOMTAS

Operation is delivered in one of three models. The Health Check recommends the model; the modules and the SLA catalogue are the same in all three.

06 · SERVICE MODELS

«DIGITALLENCY DOĞRULASIN»

PACKAGE — SLA and pool

shared team, results measured by SLA

- SLA with priorities P1 – P4
- Monthly ticket or hour pool
- Shared team with module leads
- Monthly SLA report
- Unused hours are not carried over

Fits when the workload is predictable and results are to be measured by SLA rather than by people.

Pricing structure «FIELD»

DEDICATED — Experts in the team

FTE embedded in the customer team

- Named experts by role
- Agreed seniority levels
- Work to the customer's priorities
- Replacement and continuity rules
- Monthly activity report

Fits when capacity is needed inside the customer team, often with on-site work and long-running projects.

Pricing structure «FIELD»

HYBRID — Core team plus pool

FTE core and an SLA pool

- Core FTE for daily operation
- SLA pool for peaks and incidents
- One service manager
- One priority and escalation matrix
- Monthly SLA and activity report

Fits when daily work needs a stable core team and peaks or specialist topics need flexible capacity.

Pricing structure «FIELD»

DEDICATED AND HYBRID · EXPERT ROLES

«DIGITALLENCY DOĞRULASIN»

DWH / BI developer | ETL developer | Data modeller | Architect | Analyst | Teradata expert | Informatica admin

Term and change of model. The minimum term is 12 months. The model can be changed at renewal, for example from dedicated to hybrid, using the monthly reports as the basis.

«DIGITALLENCY DOĞRULASIN»

Modules

KOMTAS

Each module adds operations for one platform family. Modules are chosen in the Health Check scope and carried into the monthly service.

07 · MODULES

«DIGITALLENCY DOĞRULASIN»

Informatica

PowerCenter and IDMC

- Workflow and session monitoring
- Restart and recovery of failed jobs
- Repository, standards, deployment checks
- Upgrade and patch support
- Monitoring accelerator rules

«DAMALINK DOĞRULASIN»

Teradata

workload and capacity

- Workload management rules
- Query and performance tuning
- Space and capacity tracking
- Statistics collection
- Backup coordination

BI

Power BI, Qlik, SAP BusinessObjects

- Report and refresh failures
- Refresh schedules and gateways
- Users and authorisation
- Universe and semantic model changes
- Report performance

DWH

load chains and data models

- Load chain monitoring
- Data model changes
- Data quality checks
- Oracle, SQL Server and others
- Cloud data warehouses

INFORMATICA · POWERCENTER AND IDMC

«DAMALINK DOĞRULASIN»

Area	PowerCenter (on-premises)	IDMC (cloud)
Monitoring	Repository-based rules and alerts (accelerator)	Platform monitoring and operational insights «FIELD»
Deployment	Deployment groups with pre-deployment checks	Asset export and import, release process «FIELD»
Upgrades	Version upgrade and patch support	Vendor service updates; regression checks

Platform list is a scope item. Modules and platforms are agreed during the Health Check «PLATFORM». On-premises and cloud platforms are both covered.

SLA and Service Catalogue

Each service has a definition, a trigger, an output and a measure. Priority targets, support window and service credits are agreed in the proposal.

KOMTAS

08 · SLA AND SERVICE CATALOGUE

SERVICE CATALOGUE

«DIGITALLENCY DOĞRULASIN»

Service	Scope	Trigger	Output	Measure
Incident management	Failed loads, jobs, refreshes, reports	Alert or ticket	Service restored, cause recorded	Response and resolution time
Change and minor enhancement	Small changes from the monthly pool	Approved request	Change deployed and documented	Delivery against agreed date
Performance management	Slow jobs, queries and reports	Threshold breach or request	Tuning action, before and after figures	Run time against baseline
Capacity management	Space, workload, growth	Monthly review or alert	Capacity forecast and actions	Free space and peak load
Reporting	Service and platform status	Monthly	SLA report, trends, improvement backlog	Report accepted by the customer

OPTIONAL SERVICES

- Problem management
- Release and deployment support
- On-call

PRIORITY MATRIX

«DIGITALLENCY DOĞRULASIN»

	Definition	Response	Resolution
P1	Critical load or report down; business stopped	«NUMBER» hours	«NUMBER» hours
P2	Major impact; limited workaround	«NUMBER» hours	«NUMBER» hours
P3	Minor impact; workaround available	«NUMBER» hours	«NUMBER» working days
P4	Request or question; no impact	«NUMBER» hours	«NUMBER» working days

SUPPORT WINDOW «OPTIONAL»

- 8×5
- 12×5
- 24×7

ESCALATION LEVELS

1. Operator on duty
2. Module lead
3. Service manager and platform owner

Service credits «FIELD»

Monitoring

KOMTAS

For Informatica PowerCenter, monitoring is set up with a rule-based accelerator that works on the repository. Other modules use the platform's own tools with agreed alerts.

09 · MONITORING

WHAT IT DETECTS

«DAMALINK DOĞRULASIN»

- Failed workflows and sessions
- Rejected records
- Runs longer or shorter than usual
- More or fewer rows than usual
- Zombie workflows and sessions
- Successful runs with zero rows
- Naming standard breaches
- Invalid objects
- Pushdown not used
- SQL overrides

RULE HIERARCHY

«DAMALINK DOĞRULASIN»

OPERATIONAL

Performance

- Low throughput
- Bottlenecks in logs
- Pushdown candidates
- Run-time statistics

Maintenance

- Volume and duration deviations
- Zero-row runs
- Rejected rows
- Zombie workflows

GOVERNANCE

Performance

- Commit size
- Lookup cache off
- Partitioning off
- Grid not used

Maintenance

- Truncate target
- Rollback on error
- Tracing level
- Log file names

Standards

- Naming conventions
- Missing comments
- Hard-coded paths
- Fixed connections

HOW IT WORKS · 37 PRE-DEFINED RULES, EXTENDABLE

Define

Metrics, categories, weights, thresholds and an owner per rule; new rules added as queries.

Measure

Rules run on the repository on a schedule; health by category; drill-down to the faulty object.

Manage

E-mail alerts for critical rules, dashboards, logs and user privileges; rules extended over time.

Beyond PowerCenter. On IDMC, the platform's own monitoring is used and the rule set is mapped to it «FIELD». For Teradata, BI and DWH, alerts and thresholds are agreed per module during transition. «DAMALINK DOĞRULASIN»

Three Tiers: Health Check, Transition, Operate

KOMTAS

The Health Check measures the platform and proposes the operating model. Transition hands over operations. Operate runs the service every month.

10 · SERVICE TIERS

A Platform Health Check

fixed fee · 3 – 6 weeks by size

- Inventory and interviews
- Standards, performance, monitoring checks
- Findings and health score per module
- Operating model, SLA, B and C estimate

OUTPUT AND ACCEPTANCE

Report accepted · findings list · health score · operating model proposal · migration readiness note

«DAMALINK DOĞRULASIN»

B Transition

one-time fixed fee

- Knowledge transfer and runbooks
- Monitoring set-up and SLA baseline
- Ticket flow, priority, escalation
- Shadow, then reverse shadow

OUTPUT AND ACCEPTANCE

Handover sign-off after the shadow period · optional platform move or upgrade «OPTIONAL»

«DIGITALLENCY DOĞRULASIN»

C Operate

monthly · package, dedicated or hybrid

- Incident, change, performance, capacity
- Informatica, Teradata, BI, DWH modules
- Monthly SLA report and backlog
- Minimum term 12 months

OUTPUT AND ACCEPTANCE

Monthly SLA report accepted · pricing structure per model «FIELD»

«DIGITALLENCY DOĞRULASIN»

INDICATIVE TIMELINE

A Health Check 3 – 6 weeks → **B Transition** shadow «NUMBER» weeks, then handover → **C Operate** monthly, minimum term 12 months, reviewed at renewal

Health Check first. Transition starts from the Health Check, or from an equivalent assessment already done by the customer «A REF». Each tier is proposed separately.

Experience and Accelerators

KOMTAS

Operations and support work shown by sector, and the prepared material used in the Health Check, transition and operation.

REFERENCE WORK

«DIGITALLENCY DOĞRULASIN»

Client	Work	Platform	Year
An airline	DWH and BI operations support	«PLATFORM»	«YEAR»
A manufacturing group	BI support	«PLATFORM»	«YEAR»
A telecom operator	Informatica support	Informatica	«YEAR»
Two banks in the Gulf region and Egypt	Teradata consultancy support	Teradata	«YEAR»
A telecom operator in Saudi Arabia	Outsourced consulting	«PLATFORM»	«YEAR»

ACCELERATORS

«DAMALINK DOĞRULASIN»

1

Health Check scoring model

Seven weighted categories, questions scored 0 to 5, extended to Teradata, BI and DWH.

2

Standards query library

Operational and governance queries on repositories; deployment checklist.

3

Performance control points

Busy percentages, caches, commit, pushdown and buffers per session.

4

PowerCenter monitoring accelerator

37 rules with weights, thresholds, alerts and dashboards.

5

Questionnaires

Requirement, developer and operator question sets.

6

Runbook and SLA templates

Transition and runbook templates, SLA catalogue, monthly report.

References are shown by sector, without customer names.

What the Customer Provides

KOMTAS

Operation works best when roles on the customer side are named and access is approved before transition starts.

11 · CUSTOMER SIDE

«DIGITALLENCY DOĞRULASIN»

Platform owner

decides and accepts

- Scope and priorities
- Approval of changes
- Acceptance of reports
- Escalation point

Business owners

use the data and reports

- Business impact of incidents
- Priority of requests
- Report and data checks
- Feedback on the service

Infrastructure and DBA

servers and databases

- Servers, storage, backups
- Database administration
- Maintenance windows
- Network and access

Security

access and policies

- User and remote access approvals
- Access reviews
- Policies and audits
- Security incidents

CONDITIONS TO START

«DAMALINK DOĞRULASIN»

Access to repositories and logs
Read access for the Health Check; operational access for transition.

A knowledge transfer source
Current team, vendor or documents that explain the platform.

A named platform owner
A person who agrees priorities and accepts reports.

Monitoring before SLA
Targets are set after a baseline is measured, not before.

Clear split of responsibilities. Infrastructure, operating system and database administration, network and licences remain with the customer or its current providers, unless agreed as optional lines.

About Komtaş, and the Next Step

KOMTAS

Who delivers Data Platform Operations Support, and what is needed to start.

12 · ABOUT KOMTAŞ AND NEXT STEP

WHY KOMTAŞ

Informatica partner
Data integration and data quality work on Informatica products.

Google Cloud and Microsoft Azure partner
Komtaş is a Google Cloud Premier partner and a Microsoft Azure partner.

Data warehouse, Teradata and BI work
Data warehouse, data integration and BI projects in several sectors.

Operations and support experience
Reference work by sector on p. 12. «DIGITALLENCY DOĞRULASIN»

From Health Check to monthly operation
Health Check, transition and operation from one partner.

Since 1989, focused on data · 250+ specialists · offices in Istanbul, Ankara, Izmir and Dubai

NEXT STEPS

1. **Walkthrough** — today — you are here
2. **Discovery call** — platforms, modules, workload, window
3. **Health Check proposal** — fixed fee, scope and plan
4. **Kick-off** — access, inventory set-up

Migration readiness. The Health Check inventory and findings are inputs to a move to Google Cloud or from PowerCenter to IDMC; the service can run the current platform during migration.

Useful for the discovery call. Platforms and versions; number of environments, workflows or jobs and reports; monthly incident or ticket volume; current support model and contract end date; required support window; any planned migration.
