KOMTAS

DATAMART CONSOLIDATION & KPI HARMONIZATION

Blueprint v1 — internal reference, draft for Digitallency

A Consolidation Assessment · B Consolidation · C Run · conformed layer, KPI dictionary, usage-based decommission on an existing platform

1 **Positioning and commercial logic**
Summary, commercial logic and partnership, evidence, target customers, DWH Assessment bridge, scope boundary.
p. 2 – 7

2 **Approach and accelerators**
Architecture, conformed layer, KPI harmonisation, decommission, reconciliation, four accelerators.
p. 8 – 14

3 **Delivery**
Assessment, Consolidation and Run, team, sizing and effort, acceptance criteria.
p. 15 – 20

4 **Follow-on and status**
Follow-on map, risks and open points, verification summary.
p. 21 – 23

Package Summary — What, for Whom, When

KOMTAS

Consolidation of scattered datamarts and DWHs into a conformed layer on an existing customer platform. Source: Digitallency 2025 deck (partner company).

01 · SUMMARY

WHAT THE PACKAGE DELIVERS

Conformed layer
conformed dimensions, shared facts, common business keys

KPI dictionary
one agreed definition per KPI, with owner and formula

Usage-based decommission
unused and duplicated objects removed with owner approval

Rebuilt marts, repointed reports
consumer marts and BI universes on the conformed layer

Reconciliation, parallel run
old and new numbers compared in every wave

THREE TIERS · UNIT = WAVE «DIGITALLENCY DOĞRULASIN»

A — Consolidation Assessment

inventory, usage heat map, decommission candidates, KPI conflicts, wave plan

4–8 weeks, fixed fee

B — Consolidation

standards, conformed core, KPI dictionary, then waves of 2–4 datamarts

foundation once + fee per wave

C — Run

new requirements, KPI dictionary upkeep, standards checks

monthly, min. 12 months

BASIS — KNOWN FACTS

- Digitallency 2025 deck: two consolidation references and one migration framework
- Akbank: 10+ datamarts developed since 2007 consolidated; KPI dictionary; query-log analysis
- Türk Telekom: 3 DWHs (MSSQL, Oracle, Sybase) into one DWH; 240 TB, 12,000 tables
- Türk Telekom results: CDR processing 20 hours → 1 hour; campaign selection 24 hours → 40 minutes
- Yapı Kredi MIS Modernization: rule-based PL-SQL migration framework (accelerator 4 only)
- Partnership model between Komtaş and Digitallency not yet settled

Status: draft v1. Built from the Digitallency 2025 deck. Durations, efforts, bands, scope items, wave size, accelerator claims, roles and acceptance criteria carry the orange tag for Digitallency to verify (p. 23).

Commercial Logic — Follow-on of DWH Assessment

internal only

KOMTAS

Internal only. Partnership terms and revenue share never appear in the customer deck or in the proposal templates.

PARTNERSHIP WITH DIGITALLENCY · OPEN «DIGITALLENCY DOĞRULASIN»

ITEM	STATUS
Delivery capacity	«FIELD»
Revenue share	«FIELD»
Proposal lead	«FIELD»
Use of references	«FIELD»
Day rates	«FIELD»

Not settled.
Who delivers, who signs and how revenue is shared is open. Until it is agreed, proposals name Komtaş only and delivery capacity is confirmed per proposal.

WHERE THE VALUE IS

A Assessment
fixed fee; often after a DWH Assessment

↓

B foundation
standards, conformed core; once

↓

B waves
fee per wave; several waves per customer

↓

C Run
monthly; new requirements on the layer

Every DWH Assessment that finds scattered datamarts is a lead for A. The waves carry the volume; C carries the recurring value.

PRICING RULES

1. A is a fixed fee by band
2. B: foundation counted once, plus a fee per wave by band
3. C is a monthly fee for a fixed hour capacity with a minimum term
4. Each A proposal names the waves, the B estimate and the C step

Door to other work. Consolidation opens data-governance (enterprise glossary), Data Modernization (when a new platform is chosen), Data Platform Operations (aday-37) and Industry Data Models (aday-36).

Evidence and Status

What the package rests on today. Internal only: references are named here; customer-facing files use anonymous references.

01 · EVIDENCE

REFERENCES IN THE DECK

10+ datamarts

Akbank — datamart consolidation

Datamarts developed since 2007 consolidated; modelling and ETL standards committees; query logs analysed in a big data environment; KPI dictionary; 4 parallel agile teams; deployment coordination of 30 datamarts.

3 DWHs → 1

Türk Telekom — DWH consolidation

MSSQL, Oracle, Sybase into one DWH; 240 TB, 12,000 tables, ~540 SSIS jobs, ~1,000 T-SQL scripts, ~200 BO universes, ~4,000 tables replicated with Golden Gate. CDR 20 h → 1 h; campaign selection 24 h → 40 min.

REFERENCES «DIGITALLENCY DOĞRULASIN»

Akbank — Datamart Consolidation 10+ datamarts; KPI dictionary; query-log analysis	partner ref.
Türk Telekom — DWH Consolidation 3 DWHs into one; two measured results	partner ref.
Yapı Kredi — MIS Modernization accelerator 4 source only; a platform change	partner ref.
Reference years «YEAR» per reference	to confirm
Use in Komtaş proposals permission; partner or Komtaş reference	to confirm
Komtaş own reference «REFERENCE PROJECT»	no reference

Delivery capacity: Digitallency «FIELD»; Komtaş team «FIELD».

GAPS AND OPPORTUNITY

Reference dates unknown

The year of each reference is not in the deck. Platforms have changed since; recent work must be shown or stated.

Partner references, not Komtaş

Whether and how the references may be presented in Komtaş proposals is open.

Follow-on of DWH Assessment

Consolidation turns DWH Assessment findings into a delivery project with several waves and a Run.

Customer naming. Customer files use anonymous references only: a private bank (10+ datamarts consolidated), a telecom operator (3 DWHs into one), a migration framework used at a private bank; one tag per list. Digitallency is not named in customer files.

Target Customers and Triggers

KOMTAS

Who is approached and on what occasion. Profiles are drafted from the reference sectors; triggers from the package description.

TARGET CUSTOMER PROFILES «DIGITALLENCY DOĞRULASIN»

Banks and financial institutions
many datamarts built by different units over many years

Telecom operators
several DWHs, high data volume, many ETL jobs and reports

Groups after a merger
units or companies with their own DWHs and KPI definitions

DWH Assessment customers
an assessment found scattered datamarts or duplicated KPIs

TRIGGERS «DIGITALLENCY DOĞRULASIN»

DWH Assessment findings

scattered datamarts, duplicated KPIs, unused tables named in an assessment.

Conflicting numbers

the same KPI shows different values in different reports.

Rising cost

maintenance and licence cost grow with every datamart and platform.

Many datamarts over years

marts built by different units, with copied data and logic.

Merger of units or companies

two or more DWHs and KPI sets must become one.

Platform end of life

one of several platforms reaches end of life; its objects move to an existing one.

First call. How many DWHs and datamarts, which platforms, how many tables, ETL jobs, reports and KPIs, query logs available, any DWH Assessment done, target platform. The answers feed the input form (file 3a).

Position — From DWH Assessment to Consolidation

KOMTAS

Typical DWH Assessment findings and the consolidation step that answers each. The package executes what the assessment found.

DWH ASSESSMENT FINDING	CONSOLIDATION STEP «DIGITALLENCY DOĞRULASIN»	WHERE
Scattered datamarts same subject in several marts, built by different units	**Inventory and conformed layer** one conformed dimension per subject; marts rebuilt on it	A P1 · B
Duplicated KPIs one KPI calculated in several ways	**KPI dictionary** variants compared; one definition agreed with the owner	A P3 · B
Unused tables objects nobody queries, still loaded every night	**Usage-based decommission** query-log analysis; candidates confirmed by owners	A P2 · B
Inconsistent numbers between reports reports disagree on the same figure	**Reconciliation and repointing** old vs new numbers per wave; reports repointed	B waves
High maintenance cost many jobs, copies and licences to run	**Waves and decommission** replaced objects removed after each wave	B · C

Without a DWH Assessment.
A builds the inventory itself (P1). A DWH Assessment done earlier shortens P1; its findings are taken over as input.

Different questions.
DWH Assessment evaluates the whole platform. The Consolidation Assessment looks only at datamarts, KPIs, usage and the wave plan.

Scope Boundary — What It Is Not

KOMTAS

What the package does not do, and the Komtaş packages it links to without absorbing them.

01 · BOUNDARY

OUT OF SCOPE «DIGITALLENCY DOĞRULASIN»

- Migration to a new platform (e.g. cloud) — Data Modernization
- Changes to source systems
- New report design beyond repointing existing reports
- Data cleansing in the source systems
- Licence procurement

BOUNDARY TO DATA MODERNIZATION

The target is a platform the customer already runs.

Consolidating several DWHs and datamarts onto a platform the customer already runs is this package. Moving to a new platform, for example to the cloud, is Data Modernization. If A shows that the target would be a new platform, the work is routed to Data Modernization.

RELATED PACKAGES

DWH Assessment evaluates the overall platform; this package executes the consolidation found there.

data-governance this KPI dictionary covers reporting KPIs; enterprise glossary and ownership: data-governance.

regulatory-reporting regulatory datamarts may be in scope as objects; report families: regulatory-reporting.

Boundary rule. Consolidation onto an existing platform: this package. New platform: Data Modernization. Platform review: DWH Assessment. Enterprise glossary: data-governance. Regulatory report families: regulatory-reporting.

Approach and Architecture

KOMTAS

Existing DWHs and datamarts are consolidated into a conformed layer; consumer marts are rebuilt on it, reports repointed, replaced objects removed.

02 · APPROACH «DIGITALLENCY DOĞRULASIN»

SOURCES — core systems · operational databases · files and feeds · external data

EXISTING DWHs, MARTS — DWH 1 … DWH n, datamarts, ETL jobs and scripts on one or more platforms

CONFORMED LAYER

- **Conformed dimensions** — customer, product, time
- **Shared facts** — one grain per process
- **Business keys** — common across marts
- **History** — kept once

CONSUMER MARTS

- **Subject-area marts** — rebuilt on the layer
- **Consumer marts** — per unit, thin
- **KPI views** — from the dictionary

REPORTS / BI — **reports repointed** · **universes repointed** · **replaced objects archived and removed**

Target platform: an existing customer platform «PLATFORM»; ETL and BI tools as in place (e.g. SSIS, Informatica, ODI; BO, Power BI). «DIGITALLENCY DOĞRULASIN»

KPI dictionary, standards

One definition per KPI; modelling and ETL standards apply to every object built (p. 10, 14).

Usage, reconciliation

Query-log usage analysis selects what moves and what is removed; old vs new numbers reconciled in a parallel run per wave.

Wave by wave. The conformed core is built once. Each wave moves 2–4 datamarts or one business area onto it, repoints their reports and removes what they replace.

Conformed Layer

KOMTAS

The conformed layer holds shared dimensions and facts once. Each existing datamart gets one decision: rebuild, merge, view, retire or leave out.

CONFORMED LAYER · BUILDING BLOCKS «DIGITALLENCY DOĞRULASIN»

- **Conformed dimensions** customer, product, organisation, time — one version for all marts
- **Shared facts** one fact table per business process, at a declared grain
- **Common business keys** one key per entity, mapped from every source
- **History** slowly changing dimensions kept once, not per mart
- **Standards** naming, model rules and ETL patterns from accelerator 3

conformed | one grain per fact | history once

PER EXISTING DATAMART · ONE DECISION «DIGITALLENCY DOĞRULASIN»

Rebuild on the layer
logic moved onto conformed dimensions and shared facts

Merge
content joined with another mart of the same subject

Keep as view
thin view on the conformed layer for existing consumers

Retire
no or low use; archived and removed (p. 11)

Leave out
not in scope, e.g. regulatory marts kept by regulatory-reporting

The decision per datamart is part of the A wave plan.

Why a conformed layer. A dimension or fact built once is used by every mart. New marts and KPIs then cost less, and one figure is the same in every report.

KPI Harmonisation

Each KPI gets one agreed definition. Variants found in the datamarts are compared and decided with the business owner.

02 · KPI HARMONISATION

KPI DICTIONARY · FIELDS «DIGITALLENCY DOĞRULASIN»

Definition
business meaning in one sentence

Formula
calculation, filters and units

Owner
business owner who decides on the definition

Source and grain
source tables and level of detail

Variants
other calculations in use and their names

Calculation per datamart
how each datamart calculates it today — conflict column

Decision
agreed definition, date, approver

HARMONISATION FLOW «DIGITALLENCY DOĞRULASIN»

1. **Collect KPIs**
   from datamarts, reports and universes
2. **Compare variants**
   conflict column filled per datamart
3. **Owner workshop**
   differences explained; one definition chosen
4. **Decide and sign off**
   decision recorded in the dictionary
5. **Build and reconcile**
   KPI built on the layer; old vs new compared

RULES AND REFERENCE

One definition per KPI «DIGITALLENCY DOĞRULASIN»

If the business needs two calculations, both stay with different names and owners; one name never has two formulas.

Reference: Akbank «DIGITALLENCY DOĞRULASIN»

KPI dictionary built during the consolidation of 10+ datamarts, with modelling and ETL standards committees.

After the project

C Run keeps the dictionary current; an enterprise glossary and ownership framework is data-governance.

Business decision. Komtaş prepares the comparison; the KPI owner decides. KPIs without an owner are listed as blockers in the input form (P5).

Decommission Based on Usage

KOMTAS

Query logs show which tables, columns and reports are used. Unused, duplicated and low-use objects are removed only with owner approval.

DECOMMISSION STEPS «DIGITALLENCY DOĞRULASIN»

1. **Collect query logs**
   DWH and BI logs for an agreed window
2. **Usage heat map**
   frequency per table, column and report
3. **Candidate list**
   unused, duplicated, low-use objects
4. **Owner confirmation**
   each candidate approved or kept
5. **Archive**
   data and definitions archived
6. **Remove**
   jobs stopped, objects dropped, list closed

CANDIDATE CATEGORIES «DIGITALLENCY DOĞRULASIN»

CATEGORY	CRITERION	ACTION	APPROVAL
Unused	no query in the log window «NUMBER» months	archive and remove	owner sign-off
Duplicated	same content in another mart or DWH	repoint consumers, then remove	owner sign-off
Low use	below «NUMBER» queries per month	merge, keep as view or remove	owner decides
Replaced by a wave	rebuilt on the conformed layer	remove after parallel run	wave acceptance
Hidden consumer found	used outside the log window	keep; check again	—

Log window.
Quarter-end and year-end jobs may not appear in a short log window. The window should include a year-end «NUMBER».

Archive before removal.
Archive retention «NUMBER» and restore route are agreed with IT before the first object is removed.

Reconciliation and Parallel Run

KOMTAS

In every wave the old and the new numbers run side by side until the agreed KPIs reconcile. Reports are repointed only after that.

02 · RECONCILIATION

RECONCILIATION LEVELS «DIGITALLENCY DOĞRULASIN»

Row counts
per table and load, old vs new

Totals
sums of key measures per period

Agreed KPIs
KPI values per period and dimension

Report outputs
repointed reports against the originals

Universe queries
same query, old and new universe

PARALLEL RUN PER WAVE «DIGITALLENCY DOĞRULASIN»

1. **Agree tolerance and periods**
   per wave, with the KPI owners
2. **Run old and new**
   both loaded for the agreed periods
3. **Compare and explain**
   each difference fixed or explained
4. **Owner sign-off**
   KPIs and reports accepted
5. **Cut over**
   repoint reports; schedule decommission

TOLERANCE AND EVIDENCE

Tolerance «DIGITALLENCY DOĞRULASIN»

Difference allowed per KPI «NUMBER» for «NUMBER» periods; agreed at wave start, not promised in advance.

Evidence kept

Reconciliation results and explanations kept per period; they are the wave acceptance evidence.

Cost of the parallel run

Both chains run during the parallel run; its length is set in the wave plan.

Explained, not hidden. A difference is either fixed or explained, for example an old calculation error or a KPI definition changed by decision. Explanations go into the KPI dictionary.

Accelerators 1–2 — Usage Analysis and KPI Dictionary

KOMTAS

Two reusable tools that produce the main A deliverables and steer the B waves.

02 · ACCELERATORS

1 Query-log based decommission analysis «DIGITALLENCY DOĞRULASIN»

Usage frequency of tables, columns and reports from the DWH query logs. Unused, duplicated and low-use objects are listed and confirmed with their owners.

OUTPUTS

- usage heat map: table, column, report
- unused objects list
- duplicated objects list
- low-use objects list
- owner confirmation sheet

From the Akbank reference: query logs analysed in a big data environment.

A · B · C

2 KPI dictionary template «DIGITALLENCY DOĞRULASIN»

One record per KPI, with the way each datamart calculates it today and the decision taken. The same template is used in A, B and C.

FIELDS PER KPI

- definition and formula
- owner and source
- grain
- variants
- calculation per datamart — conflict column
- decision

From the Akbank reference: KPI dictionary.

A · B · C

Used in A. The usage heat map and the KPI conflict table are the core A deliverables; both come from these two tools.

Accelerators 3–4 — Standards and Migration Framework

KOMTAS

Standards keep the consolidated layer consistent; the migration framework moves many objects by definitions.

02 · ACCELERATORS

3 Modelling and ETL standards «DIGITALLENCY DOĞRULASIN»

Rules that every consolidated object follows, governed by a modelling committee and an ETL standards committee during the programme.

CONTENT

- naming conventions
- conformed dimension rules
- ETL patterns: load, history, error handling
- code review checklist
- committee rhythm «NUMBER» per month

From the Akbank reference: modelling and ETL standards committees.

B · C

4 Rule-based migration framework «DIGITALLENCY DOĞRULASIN»

Moves objects by definitions without hand-written code. An option when the object count is high.

WHEN AND HOW

- object definitions kept as metadata
- code generated from rules
- option above «NUMBER» objects
- checked by reconciliation like any wave

From Yapı Kredi MIS Modernization (Sybase IQ → Oracle, PL-SQL); a platform change, used only as the source.

B

Used in B and C. Standards are set up in the B foundation and checked monthly in C. The framework is an option per wave, decided in the A wave plan.

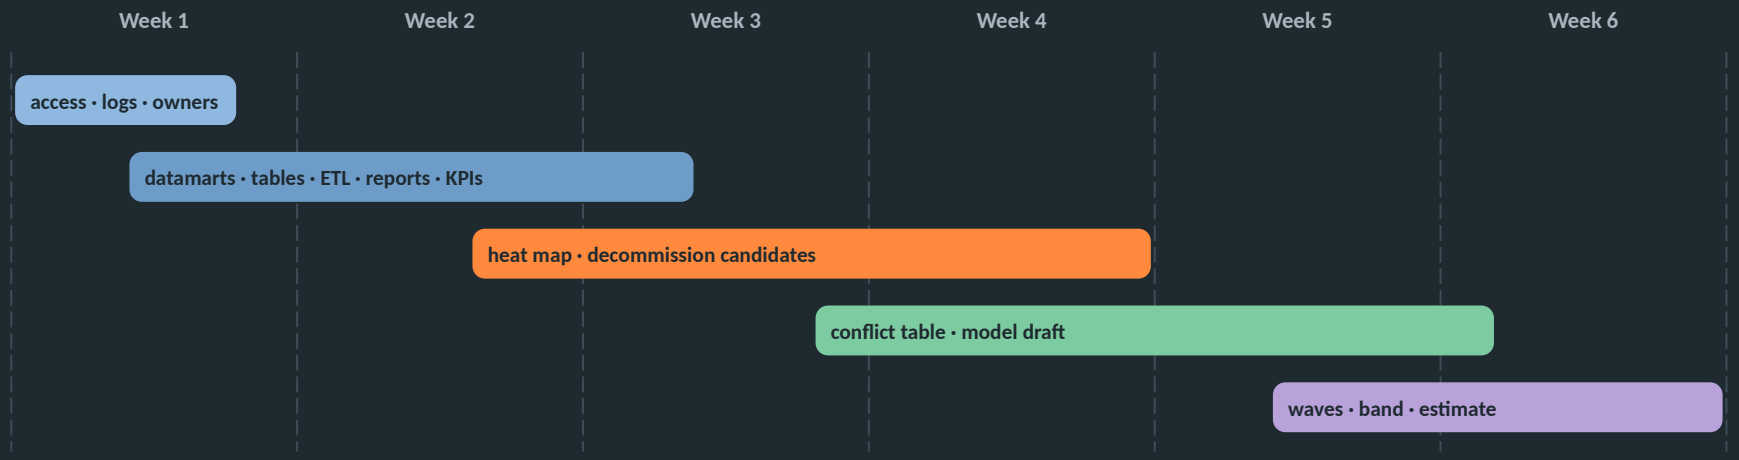

A — Consolidation Assessment: Flow and Timeline

KOMTAS

Inventory, usage analysis, KPI conflicts, conformed model draft and wave plan in phases P0–P4. Fixed fee by band.

03 · TIER A

PLAN · BAND M, 6 WEEKS

Band S 4 weeks / ~30 pd, band M 6 weeks / ~50 pd, band L 8 weeks / ~80 pd. «DIGITALLENCY DOĞRULASIN»

DECISION FOR B

Wave plan and B estimate

The read-out names the waves, the decision per datamart, the foundation, the band and the B effort. The customer decides on B wave by wave; the A results can also be used on their own.

DELIVERABLES «DIGITALLENCY DOĞRULASIN»

- Inventory
- Usage heat map
- Decommission candidates
- KPI conflict table
- Conformed model draft
- Wave plan, B estimate

Fixed fee. A is priced by band. If the target would be a new platform, the work is routed to Data Modernization.

B — Consolidation: Foundation and Waves

foundation once + fee per wave

KOMTAS

The foundation is built once; each wave moves 2–4 datamarts or one business area onto the conformed layer. Priced per wave.

Prerequisite: a Consolidation Assessment or an equivalent analysis «A REF».

COMPONENTS · FOUNDATION (TOP), PER WAVE (BOTTOM) «DIGITALLENCY DOĞRULASIN»

Standards
modelling and ETL standards, code review checklist, committees

Conformed core
shared dimensions and keys; history rules

KPI dictionary, reconciliation
dictionary set-up; reconciliation framework

Model and ETL
wave datamarts rebuilt on the conformed layer

Reconciliation, parallel run
old vs new per agreed KPI and period

Repoint, decommission, handover
reports and universes repointed; replaced objects removed

EFFORT FORMULA «DIGITALLENCY DOĞRULASIN»

B EFFORT (pd)

foundation (once) + number of waves × wave effort by band

FOUNDATION, ONCE

S ~40 pd · M ~70 pd · L ~110 pd

PER WAVE

S ~50 pd · M ~90 pd · L ~150 pd

Wave. «DIGITALLENCY DOĞRULASIN»
2–4 datamarts or one business area: model, ETL, reconciliation, repointing, parallel run, decommission, handover.

WORKED EXAMPLE · ILLUSTRATIVE

ITEM	COUNT	UNIT	PD
Foundation (M)	once	~70 pd	70
Wave 1 (M)	1	~90 pd	90
Waves 2–3 (M)	2	~90 pd	180
B effort total	3 waves		340

Figures from the draft bands (p. 19); not a quote.

C — Run: Monthly Operation of the Conformed Layer

KOMTAS

A monthly hour capacity for new requirements, KPI dictionary upkeep, standards checks and remaining decommission steps. Recurring revenue.

03 · TIER C

MONTHLY CAPACITY «DIGITALLENCY DOĞRULASIN»

S — **40 h / month**
one platform, few new requirements

M — **80 h / month**
regular new requirements and KPIs

L — **160 h / month**
several business areas, ongoing changes

ACTIVITIES «DIGITALLENCY DOĞRULASIN»

- **New requirements** — new dimensions, facts and marts on the layer
- **KPI dictionary upkeep** — new KPIs and changed definitions
- **Standards checks** — new objects against the standards
- **Remaining decommission** — open candidates closed with owners
- **Reconciliation checks** — agreed KPIs checked after changes
- **Monthly report** — capacity used, changes, open items
- **Small improvements** — performance, jobs, models

MONTHLY RHYTHM «DIGITALLENCY DOĞRULASIN»

Draft; set at C start with the DWH team and KPI owners.

REPORT	**Monthly report** — capacity used, changes, open decommission steps
CHECK	**Standards check** — new objects against naming and ETL rules
KPI	**Dictionary review** — new and changed KPIs with their owners
CHANGE	**Above capacity** — change request or a new B wave

Term. Draft minimum term 12 months. Unused hours are not carried over; work above the capacity is charged at the hour rate. «DIGITALLENCY DOĞRULASIN»

Team and Roles

KOMTAS

An engagement lead runs A and B with a data architect, ETL developers, a BI developer and a KPI business analyst; C has a run lead and a developer.

ROLES «DIGITALLENCY DOĞRULASIN»

ROLE	RESPONSIBILITY	A	B	C
Engagement lead	plan, owners, wave plan, read-out, steering	lead	lead	—
Data architect / modeller	inventory, conformed model, standards	●	●	—
ETL developers	ETL inventory, rebuild of marts, reconciliation loads	part	●	—
BI developer	report and universe inventory, repointing	part	●	—
Business analyst (KPI)	KPI collection, conflict table, owner workshops	●	●	—
Run lead	monthly report, capacity, KPI dictionary review	—	—	lead
Developer (Run)	new requirements, standards checks, decommission	—	—	●

● takes part lead accountable for delivery part part time — not staffed

CUSTOMER-SIDE CONTACTS «DIGITALLENCY DOĞRULASIN»

Business KPI owners
decide on KPI definitions and sign off reconciliation

DWH team
access, query logs, models, ETL knowledge

BI team
reports, universes, report owners

IT operations
scheduling, archive, removal of objects

Large programmes. «DIGITALLENCY DOĞRULASIN»
Several waves run as parallel agile teams; the Akbank reference ran 4. Role split Komtaş / Digitallency: «FIELD».

Staffing facts to collect.
Data modellers «NUMBER» · ETL developers «NUMBER» · BI developers «NUMBER»

Sizing — Drivers, S / M / L Bands and Effort

draft — to calibrate with Digitallency

KOMTAS

Drivers come from the input forms (files 3a–3c). Durations in weeks, effort in person-days (pd), C in hours per month.

SIZING DRIVERS «DIGITALLENCY DOĞRULASIN»

DRIVER	S	M	L
Datamarts	≤3	4–10	>10
Tables	≤500	501–3,000	>3,000
ETL jobs	≤100	101–500	>500
Reports / BI universes	≤100 / ≤10	101–500 / 11–50	>500 / >50
KPIs	≤50	51–200	>200
Source DWHs / platforms	1	2	≥3

Band rule. «DIGITALLENCY DOĞRULASIN»
The band is the highest band reached by at least three drivers. A driver at L also counts as reaching M and S.

Example scale — Türk Telekom. «DIGITALLENCY DOĞRULASIN»
3 DWHs, 240 TB, 12,000 tables, ~540 SSIS jobs, ~1,000 T-SQL scripts, ~200 BO universes, ~4,000 tables replicated → beyond L; planned as a programme with parallel teams.

DURATION / EFFORT «DIGITALLENCY DOĞRULASIN»

ITEM	S	M	L
A duration	4 weeks	6 weeks	8 weeks
A effort	~30 pd	~50 pd	~80 pd
B foundation, once	~40 pd	~70 pd	~110 pd
B per wave	~50 pd	~90 pd	~150 pd
C capacity	40 h / month	80 h / month	160 h / month

Wave 2–4 datamarts or one business area. The number of waves comes from the A wave plan. Fees «...».
«DIGITALLENCY DOĞRULASIN»

Calibration.
Draft. Bands and person-days are updated with Digitallency's effort from the reference projects (Akbank, Türk Telekom).

Acceptance Criteria

KOMTAS

Each B wave is accepted on reconciliation of the agreed KPIs, repointed reports and approved decommission. A is accepted on its deliverables.

ACCEPTANCE STEPS

1. **Tolerance and periods agreed**
   at wave start, per agreed KPI, with the KPI owners
2. **Parallel run**
   old and new run side by side
3. **Reconciliation and reports**
   KPIs within tolerance; repointed reports accepted
4. **Decommission list signed**
   removed objects listed with owner approval

CRITERIA «DIGITALLENCY DOĞRULASIN»

TIER / ITEM	CRITERION	EVIDENCE	THRESHOLD
A deliverables	inventory, heat map, candidates, KPI conflicts, model draft, wave plan	read-out and documents	accepted at read-out
B reconciliation	agreed KPIs reconcile between old and new	reconciliation report per period	within «NUMBER» for «NUMBER» periods
B repointed reports	repointed reports accepted by their owners	owner sign-off per report	all reports in the wave
B decommission	decommissioned objects listed with owner approval	signed decommission list	all objects in the wave
C Run	monthly report and agreed activities delivered	monthly report	per month

Tolerance per customer.
Tolerances and the number of periods are agreed with the KPI owners for each wave; no tolerance is promised in advance.

Outside acceptance.
Errors in source data, KPI owner decisions and report layouts beyond repointing are not acceptance criteria.

Follow-on Map

KOMTAS

Each tier leads to a named next step. In the proposal templates this is the section 'Next step', without partnership terms.

AFTER → NEXT STEP «DIGITALLENCY DOĞRULASIN»

AFTER	NEXT STEP	TYPE
A read-out	B foundation and the first waves	service project
Wave accepted	next wave from the wave plan	service project
Last wave live	C Run: new requirements, dictionary, standards	recurring service
Enterprise glossary needed	data-governance	package
New platform chosen	Data Modernization	package / project
Platform operations needed	Data Platform Operations (aday-37)	candidate asset
No industry data model	Industry Data Models (aday-36)	candidate asset
Regulatory datamarts found	regulatory-reporting	package

In the proposal templates.
Section 'Next step': further waves, C Run, data-governance, Data Modernization. No partnership terms, no prices.

Recurring value.
Waves follow each other and C keeps the layer and the dictionary current; C is the target of every A and B proposal.

Risks and Open Points

KOMTAS

Known risks of the package as drafted, how they are handled, and the questions still open.

RISKS «DIGITALLENCY DOĞRULASIN»

RISK	EFFECT	HANDLING
Business disagreement on KPIs	definitions not decided; waves stop	named KPI owner per KPI; blocker in the input form
Owners do not approve decommission	old objects stay; cost does not fall	approval step in each wave; open items move to C
Hidden consumers of 'unused' objects	removal breaks a report or job	log window covers year-end; archive and restore route
Parallel run cost	two chains run at once	periods fixed in the wave plan
Old references, usage permission	years unknown; use permission open	Digitallency confirms each reference and year

OPEN POINTS BY OWNER

Digitallency

- References: still valid, usable, year?
- Effort and duration of the references
- Query-log tool used at Akbank
- Migration framework: reusable today?

Sales and management

- Partnership model and revenue share
- Day rates, wave fees, Run fee
- Proposal lead: Komtaş or partner
- Target customer list

Komtaş delivery

- Own consolidation experience
- Modelling and ETL capacity
- Link to DWH Assessment findings
- Industry data model (aday-36)

Verification Summary

KOMTAS

Draft for review by Digitallency. Every drafted statement carries an orange tag and has one question in the sidecar file.

04 · VERIFICATION

TAGS IN THIS FILE

44

tags, same sequence in EN and TR

sidecar: datamart-consolidation-1-blueprint-tr.json

TAGS BY SECTION

Positioning, commercial	2 – 7	7
Approach, accelerators	8 – 14	17
Delivery	15 – 20	18

PACKAGE FILES

		TAGS
1	**Blueprint (this file)**	44
2	**Customer deck**	«...»
3a–c	**Input forms**	«...»
4a–c	**Proposal templates**	«...»

Package total: «...» tags; same in EN and TR.
One sidecar file per document; one question per tag.

HOW THE REVIEW WORKS

1. Digitallency answers each question in the sidecar
2. Confirmed: tag removed; changed: EN and TR updated
3. Placeholders filled: «YEAR», «NUMBER», «FIELD»
4. Efforts, bands and wave size recalibrated with real data

Known facts carry no tag: the references and their content as stated in the Digitallency 2025 deck (Akbank, Türk Telekom with its scale and two results, Yapı Kredi framework); partnership model open.
