Model Fit Assessment

Technical and Commercial Proposal

Fit and gap analysis of the sources, datamarts and KPIs of «CUSTOMER» against an industry-specific enterprise data model, with an adapted logical model draft, a platform choice and an implementation roadmap

Proposal No: KOMTAS-«CUSTOMER ABBREVIATION»-IDM-A-«YEAR»-«SEQUENCE»

Proposal Date: «dd Month yyyy»

Validity: «proposal date + 1 month»

VARIABLE GLOSSARY — in this template only the fields inside « » change per customer. All other text is fixed.

Identity: «CUSTOMER» short customer name used in the text · «CUSTOMER NAME» full legal name (cover) · «GROUP COMPANIES» group companies in scope; delete the line for a single company · «CUSTOMER ABBREVIATION» short code in the proposal number · «YEAR» year (proposal number; year of a reference project) · «SEQUENCE» proposal sequence number · «dd Month yyyy» proposal date · «proposal date + 1 month» end of validity · «price validity date» latest start date for which the fees stay valid

Context: «CUSTOMER CONTEXT» one paragraph: sector and business lines, current data warehouse and datamarts, main source systems, platform, reporting and KPI problems, regulatory needs, reason for the request · «TRIGGER» reason for the work (e.g. a new data warehouse or the renewal of the current one, a platform migration, a merger, a regulatory programme, inconsistent KPIs across datamarts, a new core system)

Scope: «MODEL» the industry-specific enterprise data model proposed for the chosen industry (generic description; no product or owner name in customer documents) · «PLATFORM» target data warehouse platform and version (e.g. Teradata, Oracle, a cloud data warehouse on Google Cloud or Microsoft Azure) and the ETL tool; see the platform options table · «BAND» sizing band S, M or L from the proposal input form

Industries: «INDUSTRY — BANKING» block of the Banking branch (including participation banks); keep the blocks of the chosen industry only · «INDUSTRY — INVESTMENT BANKING» block of the Investment Banking branch; keep the blocks of the chosen industry only · «INDUSTRY — TELCO» block of the Telco branch; keep the blocks of the chosen industry only · «INDUSTRY — INSURANCE» block of the Insurance branch (health, P&C, life and pension); keep the blocks of the chosen industry only

Commercial: «OPTIONAL» item kept or deleted by sales; if kept, delete the marker · «fee» fee excl. VAT · «amount» payment amount excl. VAT · «day rate» person-day rate (change requests) · «CITY» city where on-site meetings are free of charge

Values: «NUMBER» numeric value (count, days, weeks, months, hours, years, tolerance) · «%» percentage (payment rate, fit ratio) · «FIELD» free text (e.g. the name of a subject area, KPI set or source system, a term agreed separately)

Annex: «REFERENCE PROJECT» further reference project approved for this proposal (no names without permission); otherwise delete the row · «RESULT» measured result of a reference project, only if measured and approved for use; otherwise delete the line

Contacts: «full name» contact name · «title» contact title · «e-mail / phone» contact details

Markers: the industry blocks are resolved as described in the fill notes on the first page. «OPTIONAL» items are kept or deleted by sales. The orange DIGITALLENCY DOĞRULASIN and DAMALINK DOĞRULASIN tags mark draft statements to be verified before use. FILL NOTE boxes are internal and are deleted before sending.

Contents

FILL NOTE — this template is for service A (Model Fit Assessment) of the Industry Data Models package. The sources, datamarts, reports and KPIs of «CUSTOMER» are compared with «MODEL»; nothing is built or changed in the systems of «CUSTOMER». Service B (Model Implementation) is proposed on the basis of the results.

Industries: every heading, paragraph, table row and bullet starting with «INDUSTRY — BANKING», «INDUSTRY — INVESTMENT BANKING», «INDUSTRY — TELCO» or «INDUSTRY — INSURANCE» belongs to that industry branch. Keep the blocks of the industry chosen in P0, delete the others and then delete the remaining block markers. Annex 1 keeps only the page of the chosen industry.

Model and platform: «MODEL» is always described as an industry-specific enterprise data model; no product, brand or owner name of a model is written into a customer document. «PLATFORM» is the target data warehouse platform and ETL tool (Table 6). Licences of the platform are not part of this proposal; the licence terms of «MODEL», if any, are entered as «FIELD» after they are clarified internally.

Statements followed by an orange tag are draft assumptions of the package and are verified before the template is used. DIGITALLENCY DOĞRULASIN: the Banking, Investment Banking and Telco branches (subject areas, KPI sets, regulatory links, references), the A / B / C structure, the general method and the efforts and bands. DAMALINK DOĞRULASIN: the Insurance branch (domains, datamarts, KPI set, analytics use cases, warehouse rules, delivery documents, insurance effort and the insurance references). After verification only the tag is deleted. No proposal is sent with a tag in it.

Order of completion: industry (Table 3) → sizing values and band from the proposal input form (Table 5) → «PLATFORM» (Table 6) → scope assumption (Section 7.1) → timeline (Section 4.2) → effort and fees (Section 9) → Annex 1 and Annex 3 → remaining « » fields. No commercial figures other than the fees in Section 9 are written into this proposal.

1. Purpose

1.1 Background and Aim

«CUSTOMER CONTEXT»

The aim of this proposal is to establish how well an industry-specific enterprise data model («MODEL») fits the sources, datamarts, reports and KPIs of «CUSTOMER», what has to be added or customised, on which platform the model is built and in which order the subject areas are implemented. The reason for the work is «TRIGGER».

An industry data model provides shared core entities (party, product, time, organisation), subject areas and KPI sets prepared for the sector, with rules for history. The warehouse does not start from a blank page, and every datamart and report uses the same definitions. The assessment shows how much of this applies to «CUSTOMER» before any build starts.

1.2 External Triggers

The work is usually started by one or more of the triggers below.

Trigger	What It Requires from the Data Model
A new data warehouse or the renewal of the current one	A tested sector model as the starting point instead of a design from a blank page «DIGITALLENCY DOĞRULASIN»
Platform migration, for example from on-premises to the cloud	Adoption of the model while the warehouse is rebuilt anyway
Merger or acquisition	A common model into which the data of both companies is brought
Regulatory programme	Consistent and traceable data from which regulatory reports can be fed
Inconsistent KPIs across datamarts	One definition per KPI on shared core entities
New core system	Source mapping to a stable model instead of rebuilding every report

Table 1 — External triggers.

1.3 Service Structure

The package is offered as three services. This proposal covers service A.

Service	Focus	Result	Pricing
A — Model Fit Assessment	Current landscape, fit mapping of sources and KPIs to the model, gap analysis with a fit ratio per subject area, adapted logical model draft, platform choice, implementation roadmap; 4 to 8 weeks «DIGITALLENCY DOĞRULASIN»	Fit/gap matrix, fit ratio table, adapted logical model draft, KPI mapping, roadmap and estimate for B	Fixed fee
B — Model Implementation	Foundation once (physical model, core entities, standards, historisation, ETL framework, data quality checks, semantic layer base), then subject area by subject area: mapping, ETL, KPI set, reports base, parallel validation	Industry model and EDW running on «PLATFORM»; KPIs reconciled with the current reports	Fixed fee for the foundation and per subject area
C — Extension	C1: a new subject area, KPI set or source, one-time per item. C2 (optional): monthly run and model maintenance	Model extended as the business changes	C1 fixed fee per item; C2 monthly fee

Table 2 — Service structure. This proposal covers service A.

At the end of the work, «CUSTOMER» has a fit/gap matrix of its sources and KPIs against the model, a fit ratio per subject area, an adapted logical model draft, a platform choice and a roadmap with an estimate for service B.

2. Scope

2.1 Industry and Subject Areas

The assessment is carried out for the industry chosen in P0. The subject areas and KPI sets of the model for that industry are summarised below and described in Annex 1.

Industry	Subject Areas	KPI Sets	Regulation
«INDUSTRY — BANKING» Banking, including participation banks	Party, event, channel, campaign, media, contract; to be confirmed in A: product, account, collateral, general ledger «DIGITALLENCY DOĞRULASIN»	Customer 360; sales and profitability; campaign and marketing; to be confirmed: risk and regulatory feed	BDDK; specifics of interest-free products for participation banks
«INDUSTRY — INVESTMENT BANKING» Investment Banking	Customer and account, order and transaction, portfolio and position, instrument, market data, fee and commission, channel	Trading volume, commission income, assets under management and portfolio, active customers, channel share	SPK, MKK
«INDUSTRY — TELCO» Telecommunications	Party, event, finance, network, contract, product; to be confirmed in A: usage (CDR), billing	Churn, ARPU, usage, campaign response	BTK
«INDUSTRY — INSURANCE» Insurance: health, P&C, life and pension	About 30 warehouse domains, among them policy, policyholder and insured, coverage, claim, provision, product, agency and agent, reinsurance, coinsurance, commission account; datamarts for customer value, segmentation, sales, fraud and health «DAMALINK DOĞRULASIN»	Renewal rate, loss and combined ratios, hit ratio, STP rate, provision speed, earned premium, budget tracking	SEDDK

Table 3 — Industry branches. Keep only the row of the chosen industry; details are in Annex 1.

2.2 Scope Topics

The assessment covers the topics below. «DIGITALLENCY DOĞRULASIN»

#	Topic	Content
1	Current landscape	Source systems, existing data warehouse and datamarts, reports and KPIs in use, their owners and definitions
2	Fit mapping	Source entities and attributes mapped to the subject areas and entities of the model
3	KPI mapping	KPI requirements of «CUSTOMER» mapped to the KPI sets of the model
4	Gap analysis and fit ratio	What is in the model but not in the sources, what is in the sources but not in the model, what has to be customised; fit ratio per subject area
5	Adapted logical model draft	Model with the customisations of «CUSTOMER», prioritised subject areas
6	Platform choice	Target platform and ETL tool for the model, with the reasons
7	Roadmap and estimate	Scope of service B: foundation and subject areas in order, band and estimate

Table 4 — Scope topics.

2.3 Scope Size

Sizing Driver	Value	Source
Subject areas in scope	«NUMBER»	Statement of «CUSTOMER»
Source systems	«NUMBER»	Statement of «CUSTOMER»
Data volume (TB)	«NUMBER»	Statement of «CUSTOMER»
History depth (years)	«NUMBER»	Statement of «CUSTOMER»
KPIs	«NUMBER»	Statement of «CUSTOMER»
Model customisation	«FIELD»	Estimated in P0, confirmed in P3

Table 5 — Values on which sizing is based. Band: «BAND». The values are checked in P0.

FILL NOTE — take the values and the band from the proposal input form (industry-data-models-3a-fit-assessment-girdi-formu). Draft band drivers:

Subject areas: S ≤3 · M 4–7 · L >7. Source systems: S ≤5 · M 6–15 · L >15. Data volume (TB): S ≤5 · M 5–50 · L >50. History depth (years): S ≤2 · M 3–5 · L >5. KPIs: S ≤50 · M 51–200 · L >200. Model customisation: S low · M medium · L high. Band rule: the highest band reached by at least three drivers. «DIGITALLENCY DOĞRULASIN»

2.4 Platform Options

The model can be built on-premises or in the cloud. The platform choice is part of the assessment (P4); the current platform of «CUSTOMER» is recorded in P1.

Area	On-premises	Cloud
Data warehouse platform	Teradata, Oracle, SQL Server	Cloud data warehouse on Google Cloud (BigQuery) or Microsoft Azure («FIELD»)
ETL	Informatica PowerCenter or the ETL tool of «CUSTOMER»	Informatica IDMC or the native services of the cloud provider («FIELD»)
Semantic layer and BI	BI tool of «CUSTOMER» («FIELD»)	BI tool of «CUSTOMER» («FIELD»)
Target platform of «CUSTOMER»	«PLATFORM»	—

Table 6 — Platform options. Target platform: «PLATFORM».

2.5 Boundaries to Other Services

This service builds the industry data model and the enterprise data warehouse. The regulatory reporting service builds the regulatory reporting chain on top of it: the common regulatory layer, the data demand layer and the data quality and validation controls of the reports; the model built here can feed that chain. The DWH Assessment service evaluates the overall data platform and defines its target state; this service implements an industry model once that target is set. The two services are proposed separately where they are needed.

3. Approach

3.1 Approach Steps

The assessment follows four steps after the kick-off: Understand → Map → Analyse → Plan. «DIGITALLENCY DOĞRULASIN»

- **Understand:** sources, existing warehouse and datamarts, reports and KPIs; interviews with the business owners and the warehouse team.
- **Map:** source entities and attributes to the model; KPI requirements to the KPI sets of the model.
- **Analyse:** gaps in both directions, customisation needs and the fit ratio per subject area.
- **Plan:** adapted logical model draft, prioritised subject areas, platform choice, scope and estimate of service B.

3.2 Current Landscape

In P1 the source systems in scope, the existing data warehouse and datamarts, and the reports and KPIs in use are listed with their owners. For each KPI the current definition, the report in which it appears and the source from which it is calculated are recorded; KPIs with the same name and different definitions are listed separately. The data structures of the sources are read from the database catalogues and the existing documentation, and the business owners and the warehouse team are interviewed. «DIGITALLENCY DOĞRULASIN»

3.3 Fit Mapping

In P2 the source entities and attributes are mapped to the subject areas and entities of the model in the fit/gap matrix (accelerator 1, Annex 2), starting with the core entities shared by all subject areas: party, product, time and organisation. Each mapping is classified as a fit, a fit with change or a gap. The KPI requirements of «CUSTOMER» are mapped to the KPI sets of the model in the same way (accelerator 5 or 6, Annex 2). The mapping is reviewed with the business owner of each subject area. «DIGITALLENCY DOĞRULASIN»

3.4 Gap Analysis and Fit Ratio

In P3 the gaps are analysed in both directions and a fit ratio is calculated per subject area: the share of the required source attributes and KPIs that map to the model without change or with a small change. The result determines the customisation level, which is one of the sizing drivers of service B. «DIGITALLENCY DOĞRULASIN»

Result	Meaning	Consequence for Service B
In the model, not in the sources	The model expects data that «CUSTOMER» does not hold today	Left empty, sourced later or removed from the adapted model
In the sources, not in the model	Data specific to «CUSTOMER» that the model does not cover	Added in custom tables; core tables are not changed
Customisation needed	A model entity exists but its structure or rules differ	Customisation effort per subject area
Fit ratio high: ≥ «%»	Most of the subject area fits	Customisation low
Fit ratio medium: «%» – «%»	A substantial part needs change	Customisation medium
Fit ratio low: < «%»	The subject area differs from the model	Customisation high; subject area design reviewed

Table 7 — Gap types and fit ratio classes.

3.5 Adapted Logical Model, Platform and Roadmap

In P4 the model is adapted to «CUSTOMER» at logical level: entities that are not needed are left out, specific attributes are placed in custom tables and the core entities are kept unchanged. The subject areas are prioritised by business value, data availability and dependencies. The target platform and ETL tool are chosen with their reasons, and the scope of service B is set out: the foundation, the subject areas in order, the band and the estimate. «DIGITALLENCY DOĞRULASIN»

3.6 Industry-Specific Points

In addition to the steps above, the assessment covers points specific to the chosen industry:

Industry	Specific Points
«INDUSTRY — BANKING»	Feeds for BDDK reporting; interest-free products, profit-share accounts and funds of participation banks; Customer 360 on a single party view (P1 – P3) «DIGITALLENCY DOĞRULASIN»
«INDUSTRY — INVESTMENT BANKING»	Feeds for SPK and MKK reporting; history of orders, transactions and positions; instrument and market data from external providers
«INDUSTRY — TELCO»	Volume of usage records (CDR) and the history kept; feeds for BTK reporting; churn and ARPU definitions agreed with the business
«INDUSTRY — INSURANCE»	Lines of business (health, P&C, life and pension) and their core systems; policy, claim and provision history; external data sources of the sector; multi-currency; feeds for SEDDK reporting; single customer across lines of business «DAMALINK DOĞRULASIN»

Table 8 — Industry-specific points. Keep only the row of the chosen industry.

4. Activities and Timeline

4.1 Phases

The work is carried out in five phases. Each phase has a written exit criterion. «DIGITALLENCY DOĞRULASIN»

Phase	Activities	Exit Criterion
P0 Kick-off, industry and scope	Industry branch, subject areas and sources in scope, access to catalogues and documents, interview plan	Scope document approved; access ready
P1 Current landscape	Sources, existing warehouse and datamarts, reports and KPIs, interviews	Landscape reviewed with the warehouse team
P2 Fit mapping	Source entities and attributes to the model; KPI requirements to the KPI sets	Mapping reviewed with the business owners
P3 Gap analysis	Gaps in both directions, customisation needs, fit ratio per subject area	Fit/gap matrix and fit ratio table reviewed
P4 Model, platform and roadmap	Adapted logical model draft, prioritised subject areas, platform choice, scope and estimate of B, report	Results presented; deliverables handed over

Table 9 — Phases and exit criteria.

4.2 Timeline

FILL NOTE — the duration follows the band in Section 9. Draft distribution of the weeks for band M (6 weeks): P0 0.5 · P1 1.5 · P2 2 · P3 1 · P4 1 weeks. «DIGITALLENCY DOĞRULASIN»

Phase	Work Step	Weeks
P0	Kick-off, industry and scope	«NUMBER»
P1	Current landscape	«NUMBER»
P2	Fit mapping	«NUMBER»
P3	Gap analysis	«NUMBER»
P4	Model, platform and roadmap	«NUMBER»
	Total	«NUMBER»

Table 10 — Distribution of the weeks. Band: «BAND».

The timeline applies provided the assumptions in Section 7 hold. Delays in access or in the availability of the business owners and the warehouse team move the timeline by the same amount.

5. Deliverables and Acceptance

5.1 Deliverables

Documents are delivered in Turkish, in editable format (Microsoft Word / Excel / PowerPoint) together with a PDF copy; the logical model draft is also delivered in the format of the modelling tool agreed in P0.

#	Deliverable	Phase	Content
D1	Scope document	P0	Industry branch, subject areas, sources, KPIs in scope, access, sizing values «DIGITALLENCY DOĞRULASIN»
D2	Current landscape inventory	P1	Sources, warehouse and datamarts, reports, KPIs with definitions and owners
D3	Fit/gap matrix	P2 – P3	Source entities and attributes against the model, with fit class, gap type and customisation need
D4	KPI mapping	P2	KPI requirements against the KPI sets of the model; conflicting definitions
D5	Fit ratio table	P3	Fit ratio and customisation level per subject area
D6	Adapted logical model draft	P4	Model with the customisations of «CUSTOMER», prioritised subject areas
D7	Platform choice and roadmap for B	P4	Target platform and ETL tool, foundation and subject areas in order, band and estimate
D8	Assessment report and presentation	P4	Summary of D2 – D7 for management

Table 11 — Deliverables.

5.2 Acceptance

Deliverable	Acceptance Criterion
Landscape and mapping (D2 – D4)	Every source and subject area named in P0 covered, or recorded with the reason why it was not covered «DIGITALLENCY DOĞRULASIN»
Fit/gap result (D3, D5)	Fit/gap matrix and fit ratio table accepted by the business owners and the warehouse team of «CUSTOMER», or open points listed
Model, platform and roadmap (D6, D7)	Model draft, platform choice and estimate given with the assumptions they rest on

Table 12 — Acceptance criteria.

Each deliverable is reviewed by «CUSTOMER» within «NUMBER» working days of delivery. If no written objection is received in that period, the deliverable is deemed accepted.

6. Customer Responsibilities

«CUSTOMER» is responsible for the items below. A delay in any of them moves the timeline by the same amount.

- Appoint a project coordinator and a business owner for each subject area in scope, who are available throughout the work.
- Provide read access to the database catalogues of the sources and of the existing warehouse, and the existing documentation, report list and KPI definitions, within «NUMBER» working days from the start of P0.
- Make the warehouse team and the owners of the source systems available for interviews and for the review of the mapping.
- Decide on conflicting KPI definitions within «NUMBER» working days of their being raised.

The participation expected from «CUSTOMER» is: «DIGITALLENCY DOĞRULASIN»

Role	Expected Contribution	Participation
Sponsor	Scope, priorities, acceptance of the roadmap	P0, P4
Business owners per subject area	KPI requirements and definitions, review of the mapping	P0, P2 – P4
Warehouse team	Existing warehouse and datamarts, reports, loads	P1 – P3
Source system owners	Data structures and meaning of the source data	P1 – P2
Architecture team	Platform choice and target architecture	P0, P4

Table 13 — Expected participation of «CUSTOMER». Total expected effort is «NUMBER» person-days.

7. Assumptions and Out of Scope

7.1 Assumptions

The duration, effort and fee in this proposal are based on the assumptions below. If they do not hold, the impact is assessed through a change request.

- The work starts within «NUMBER» working days of contract signature.
- The assessment covers one industry branch, the subject areas and sources in Table 5 and up to «NUMBER» KPIs; source structures are read from catalogues and documents, not from a full data profiling. «DIGITALLENCY DOĞRULASIN»
- The values in Table 5 have been stated by «CUSTOMER». If the landscape in P1 indicates a different band, duration and effort are reassessed at the end of P1.
- Access is read-only. Nothing is built or changed in the systems of «CUSTOMER».
- The work is carried out mainly remotely through the access provided by «CUSTOMER»; the kick-off, the mapping reviews and the results presentation are held on site in «CITY».
- The working language and the language of the deliverables is Turkish.

7.2 Out of Scope

The topics below are outside the scope of this proposal. If requested, they are assessed and proposed separately. «DIGITALLENCY DOĞRULASIN»

- Physical model, loads and reports; these are the subject of service B.
- Changes to source systems.
- Rebuilding of the full BI report portfolio.
- The regulatory reporting chain (separate service).
- Platform licences and infrastructure.
- Licence fees of «MODEL», if any: «FIELD».

8. Team

8.1 Komtaş Team

Role	Responsibility	Participation
Engagement Lead	Plan, interviews with the sponsor, report, roadmap	P0 – P4 «DIGITALLENCY DOĞRULASIN»
Industry Data Modeller / Architect	Fit mapping, gap analysis, fit ratio, adapted logical model draft	P1 – P4
Business Analyst with sector knowledge	Current landscape, KPI requirements and mapping, interviews	P0 – P3
ETL and Platform Consultant	Source structures, platform choice, estimate of the loads	P1, P4, part time

Table 14 — Komtaş team and roles.

- If a change in the team is needed, the replacement has at least equivalent qualifications and is notified to «CUSTOMER» in advance.

8.2 Governance

- Weekly progress meeting on access, open items and timeline.
- Review and written approval at the end of each phase.
- Any issue that affects the timeline or the scope is reported in writing in the week it is found.

8.3 Risks

Risk	Impact	Mitigation
Business owners with sector knowledge not available	KPI mapping incomplete	Interview plan and owners per subject area agreed in P0
Undocumented sources	Mapping takes longer	Structures read from database catalogues; gaps recorded
Conflicting KPI definitions	Mapping cannot be closed	Conflicts listed and decided by «CUSTOMER» within the agreed period
Customisation requests beyond the model	Larger scope for B	Requests classified by value and placed in custom tables or later subject areas
Model content older than current products or regulation	Gaps in recent topics	Gaps recorded in the fit/gap matrix and sized for B

Table 15 — Risks.

Any request that affects the scope, the timeline or the fee is handled through a written change request. It is not carried out before its impact and fee are approved.

9. Effort and Fees

> *FILL NOTE — take the band, the duration and the effort from the proposal input form (industry-data-models-3a-fit-assessment-girdi-formu). Fees are entered by sales. Draft values:*
>
> *Duration and Komtaş effort: S 4 weeks / ~25 pd · M 6 weeks / ~40 pd · L 8 weeks / ~60 pd.* «DIGITALLENCY DOĞRULASIN»
>
> *Insurance branch: the same durations and effort apply; the domain and datamart catalogue (accelerator 6) is used in P2.* «DAMALINK DOĞRULASIN»
>
> *The values are not based on recorded effort. Delete this box before sending.*

Service A is offered at a fixed fee. The fee is based on the sizing values in Table 5 and the assumptions in Section 7.

Item	Effort (pd)	Fee (excl. VAT)
P0 — Kick-off, industry and scope	«NUMBER»	«fee»
P1 — Current landscape	«NUMBER»	«fee»
P2 — Fit mapping	«NUMBER»	«fee»
P3 — Gap analysis	«NUMBER»	«fee»
P4 — Model, platform and roadmap	«NUMBER»	«fee»
Total	«NUMBER»	«fee»
Change requests	Per person-day	«day rate»

Table 16 — Fees. Band: «BAND». All fees exclude VAT.

Payment Item	Rate	Amount (excl. VAT)
Contract signature	«%»	«amount»
Acceptance of the fit/gap result and the roadmap (P4)	«%»	«amount»

Table 17 — Payment schedule. All fees exclude VAT.

The fee does not include:

- Model implementation (service B) and extensions (service C).
- Platform licences and infrastructure; licence fees of «MODEL», if any.
- Travel and accommodation outside «CITY».

- Additional work approved through change requests.

10. Next Step

The results of the assessment are the basis of the next steps. The usual follow-on work is:

Need	Follow-On Work
Build of the model and the warehouse	Service B Model Implementation: foundation and subject areas in the order of the roadmap (D7)
Regulatory reports fed from the model	Regulatory reporting service
One customer record behind Customer 360 and single customer KPIs	Master data management service
Many datamarts with their own definitions	Datamart consolidation onto the model
Business definitions of the model in a glossary	Data governance service

Table 18 — Follow-on work.

After the results presentation, service B is proposed on the basis of the roadmap and the estimate (D7).

11. Commercial Terms

11.1 General Terms

- All fees in this proposal are stated in Turkish lira and exclude VAT. Statutory taxes, duties and charges are not included in the fees.
- The proposal is valid until «proposal date + 1 month».
- The fees are valid on condition that the work starts by «price validity date». If the start moves beyond that date for any reason, the fees and pricing terms are reassessed by mutual agreement in the light of the economic and financial conditions at the time of the work.
- This work is offered at a fixed fee, based on the sizing values in Table 5 and the assumptions in Section 7.
- «OPTIONAL» If the contract for service B is signed within «NUMBER» months of the acceptance of this work, the fee of this work is deducted from the fee of service B.
- The start date of the work is agreed with «CUSTOMER». All activities are carried out mainly online; on-site meetings take place within «CITY».
- Decisions on the scope, on the KPI definitions and on the acceptance of the deliverables remain with «CUSTOMER». «CUSTOMER» remains the data controller for any personal data accessed in the work.
- Payment follows the payment schedule in Section 9. Invoices are payable within «NUMBER» days of the invoice date.
- Scope changes are managed through a written change request; no change is implemented before its impact analysis is approved.
- The parties keep confidential all information they access within the scope of the work. A separate non-disclosure agreement is signed where needed.
- The rights of use of the deliverables prepared for «CUSTOMER», including the adapted logical and physical models, mappings, ETL code and documents, belong to «CUSTOMER»; Komtaş retains its intellectual property rights in its methodology, templates, accelerators and general know-how. The rights of use and the licence terms of «MODEL» and of the accelerators in Annex 2 are «FIELD».
- This proposal forms an integral annex to the contract to be signed by the parties. In the event of a conflict between the contract and the proposal, the contract prevails.

11.2 Proposal Contact Details

Questions on this proposal and its scope can be addressed to the contacts below.

Area of Responsibility	Full Name	Title	Contact
Commercial	«full name»	«title»	«e-mail / phone»
Technical	«full name»	«title»	«e-mail / phone»

11.3 Proposal Annexes

This proposal is submitted with the following annexes:

- ANNEX-1 — Industry Data Model Content
- ANNEX-2 — Accelerators
- ANNEX-3 — About Komtaş

ANNEX-1 — Industry Data Model Content

This annex describes the content of the industry-specific enterprise data model for each industry branch. Keep only the page of the industry chosen in P0. The content is adapted to «CUSTOMER» in the Model Fit Assessment.

1. «INDUSTRY — BANKING» Banking

Item	Content
Subject areas	Party (customer, prospect, employee, organisation and their relationships), event (transactions and interactions), channel, campaign, media, contract (agreements between the bank and its customers) «DIGITALLENCY DOĞRULASIN»
To be confirmed in A	Product, account, collateral, general ledger
KPI sets	Customer 360 (products held, channel use, value and profitability per customer); sales and profitability; campaign and marketing (response, conversion, cost per campaign); to be confirmed: risk and regulatory feed
Regulatory link	BDDK reporting; for participation banks, interest-free products, profit-share accounts and funds
Typical sources	Core banking, cards, loans, treasury, digital channels, CRM and campaign tools
Related services	Regulatory reporting (fed from the model); master data management for the customer golden record behind Customer 360

Table 19 — Banking: model content.

2. «INDUSTRY — INVESTMENT BANKING» Investment Banking

Item	Content
Subject areas	Customer and account, order and transaction, portfolio and position, instrument, market data, fee and commission, channel «DIGITALLENCY DOĞRULASIN»
To be confirmed in A	All subject areas above are confirmed against the model in A
KPI sets	Trading volume, commission income, assets under management and portfolio, active customers, channel share
Regulatory link	SPK and MKK reporting
Typical sources	Brokerage and order systems, custody, fund management, market data providers, digital channels
Related services	Regulatory reporting (fed from the model)

Table 20 — Investment banking: model content.

3. «INDUSTRY — TELCO» Telecommunications

Item	Content
Subject areas	Party (subscriber, customer, dealer, organisation), event (calls, sessions, interactions), finance, network (elements, locations, capacity), contract (subscriptions and agreements), product (tariffs, packages, services) «DIGITALLENCY DOĞRULASIN»
To be confirmed in A	Usage (CDR), billing
KPI sets	Churn, ARPU, usage, campaign response
Regulatory link	BTK reporting
Typical sources	Billing, CRM, mediation and usage records, network inventory, order management, dealer and digital channels
Related services	Master data management for the subscriber and customer golden record

Table 21 — Telecommunications: model content.

4. «INDUSTRY — INSURANCE» Insurance

Item	Content
Architecture	Operational systems of each line of business and external sources → extraction (CDC, ETL, batch) → staging → warehouse → datamarts → BI, CRM and advanced analytics; a data management layer for integration, quality, master data, metadata and security «DAMALINK DOĞRULASIN»
Health	Policy and group policy, customer, policyholder and insured, coverage, underwriting, product, provision, network and institution, agency, third-party administrator
P&C	Customer, policy and group policy, policyholder and insured, coverage, claim, product, property, network, service
Life and pension	Customer, policy, policyholder and insured, coverage, claim and loss event, product, agent, reinsurance, commission account, booking basis
Warehouse domains	About 30 domains, among them agency, agent, bank, building, business partner, claim, coinsurance, commission account, company, coverage, customer, damage, insured, litigation, location, loss event, network, policy, policyholder, product, property, provision, reinsurance, underwriting, vehicle
External sources	Sector information centres, identity and address registers, credit bureau, marketing data (messages, social media, calls, campaigns)

Table 22 — Insurance: architecture and domains.

Item	Content
Datamarts	Customer value management (one customer across lines of business), VIP customer, retail customer segmentation, call centre performance, fraud, health (provision and underwriting performance), sales (by region, agent, channel and line of business; plan against actual), cross-selling and penetration, agency incentive «DAMALINK DOĞRULASIN»
KPI sets	New, lost and existing customers and policies; renewal rate; loss and combined ratios; hit ratio from quote to policy; STP rate; provision speed; production performance; exposure and earned premium; budget tracking (net earned premium, gross and net loss ratios, combined ratio; month to date and year to date)
Analytics use cases	Complaint and feedback analytics; geographic and weather risk; social media interaction; renewal prediction for health policies
Warehouse rules	Historisation; full and delta loads; definitions for all tables and columns; multi-company, multi-currency and multi-language; core tables are not changed, specific attributes go to custom tables
Regulatory link	SEDDK reporting
Related services	Master data management for one customer across group companies and lines of business

Table 23 — Insurance: datamarts, KPIs and rules.

ANNEX-2 — Accelerators

The work uses six accelerators: templates, standards, an ETL framework and catalogues that shorten the analysis and the build. Each accelerator is described below with the place where it is used in this service. Accelerator 5 applies to banking, investment banking and telecommunications, accelerator 6 to insurance.

1. Fit/Gap Matrix Template

Item	Description
Purpose	Record for every source entity, attribute and KPI where it fits the model, what is missing and what has to be customised «DIGITALLENCY DOĞRULASIN»
Content	One row per source entity, attribute or KPI: source, model subject area and entity, fit class (fits, fits with change, gap), gap type (in the model but not in the sources; in the sources but not in the model), customisation need, priority; fit ratio per subject area
Use in this service	P2 – P3: fit mapping, gap analysis and fit ratio (Sections 3.3 and 3.4)

Table 24 — Fit/Gap Matrix Template.

2. Source-to-Target Matrix Template

Item	Description
Purpose	Specify the loading of each model entity from its sources in a form that developers and testers use in the same way «DIGITALLENCY DOĞRULASIN»
Content	Source table and column, transformation rule, target entity and attribute, load type (full or delta), historisation, data quality check and test case for each mapping
Use in this service	P4: estimate of the mappings for service B

Table 25 — Source-to-Target Matrix Template.

3. Naming and Loading Standards

Item	Description
Purpose	Keep the physical model and the loads consistent across subject areas and developers «DAMALINK DOĞRULASIN»
Content	Naming conventions for tables, columns, keys and jobs; standard header attributes on every table; delta detection; default values for empty columns and trimmed strings; core tables are not changed and specific attributes go to custom tables; historisation rules
Use in this service	P4: custom tables and standards in the adapted logical model draft

Table 26 — Naming and Loading Standards.

4. Parametric ETL Framework

Item	Description
Purpose	Build the loads of all subject areas on one tested structure for delta loads, parameters and recovery «DAMALINK DOĞRULASIN»
Content	Parameter tables for sources, periods and load windows; delta loads; restart and recovery strategy after a failed load; load log and row counts for reconciliation
Use in this service	P4: estimate of the loads and of the ETL framework for service B

Table 27 — Parametric ETL Framework.

5. KPI Catalogues

Item	Description
Purpose	Start the KPI definitions from a catalogue of the sector instead of collecting them report by report «DIGITALLENCY DOĞRULASIN»
Content	KPI catalogues for banking, investment banking and telecommunications: definition, formula, model entities used, granularity and owner of each KPI
Use in this service	P2: KPI mapping for banking, investment banking and telecommunications

Table 28 — KPI Catalogues.

6. Insurance Domain and Datamart Catalogue

Item	Description
Purpose	Start an insurance warehouse from a catalogue of domains, datamarts and KPIs built from earlier work «DAMALINK DOĞRULASIN»
Content	Source domains by line of business, about 30 warehouse domains, datamart designs, the insurance KPI set and the set of delivery documents per layer: business requirements, analysis, design, technical architecture, source-to-target matrix, data model document, technical and operational documents
Use in this service	P2: domain and KPI mapping for insurance

Table 29 — Insurance Domain and Datamart Catalogue.

ANNEX-3 — About Komtaş

> *FILL NOTE — the figures in Table 30 and in the bullets below come from the proposals of 2026. Check them against the current corporate profile before sending.*

Komtaş is an independent information technology company that has specialised in enterprise data management in Türkiye since 1989. More than 35 years of focus on a single field has given it an end-to-end view that follows data from the moment it is created to the moment a decision is taken.

Indicator	Value
Founded	1989 — more than 35 years of continuous data-focused activity
Specialist staff	250+ data engineers, architects, consultants and analysts
Offices	Istanbul, Ankara, Izmir, Dubai
Strategic partnerships	10+ global technology vendors
Focus area	Data governance, data architecture, analytics, artificial intelligence and AI agent based solutions
Positioning	"From Data to Agents" — integrated capability from data to AI agents

Table 30 — Komtaş corporate profile.

Service Capabilities

The service portfolio of Komtaş covers the whole life cycle of a data initiative:

- **Data Governance and Data Management:** data governance maturity assessment, framework and organisation design, policy and process design, data catalogue, business glossary, data quality management, master data management, data privacy and classification.
- **Data Architecture and Engineering:** data warehouse and data lake architectures, lakehouse design, data integration and streaming architectures, cloud and on-premises modernisation.
- **Analytics and Artificial Intelligence:** enterprise reporting, advanced analytics, machine learning models, generative AI applications and AI governance.
- **Managed Services and Support:** P1 / P2 / P3 support for production systems, capacity and performance management, continuous improvement services.
- **Training and Capability Building:** product training, role-based data governance training, train-the-trainer programmes.

Industry Data Model Experience

> *FILL NOTE — the references in Tables 31 and 32 are anonymous. Do not add institution names, system names, model names, partner names, contact persons or result figures without written approval; «YEAR» is filled once the year of the work is confirmed, «RESULT» is deleted if no measured result is approved, and the «REFERENCE PROJECT» row is deleted if there is no approved reference. Keep only the table of the chosen industry.*

Data warehouse work on industry data models is listed below. Reference calls can be arranged on request, subject to the approval of the institutions concerned.

Institution	Work	Measured Result	Year
«INDUSTRY — INVESTMENT BANKING» Three investment firms	Investment banking data warehouse on an industry data model «DIGITALLENCY DOĞRULASIN»	«RESULT»	«YEAR»
«INDUSTRY — TELCO» A telecom group	Enterprise data warehouse on an industry logical data model	«RESULT»	«YEAR»
«INDUSTRY — BANKING» Two participation banks and a Gulf bank	Banking enterprise data warehouse on an industry data model	«RESULT»	«YEAR»

Table 31 — Banking, investment banking and telecommunications references (anonymous).

Institution	Work	Measured Result	Year
«INDUSTRY — INSURANCE» An insurance group	Customer data across the systems of the group companies brought together into a single customer view «DAMALINK DOĞRULASIN»	«RESULT»	«YEAR»
«INDUSTRY — INSURANCE» «REFERENCE PROJECT»	Insurance data warehouse on an industry data model («FIELD»)	«RESULT»	«YEAR»

Table 32 — Insurance references (anonymous).

Why Komtaş

- **Focus:** Komtaş has worked only in the data field for more than 35 years, with more than 250 specialists and 4 offices.
- **From assessment to implementation:** the team that maps the model in the assessment also builds it in service B (Section 10).
- **Platforms:** experience with Teradata and Informatica, and Google Cloud Premier partnership, so that the model can be built on-premises or in the cloud.
