Model Implementation

Technical and Commercial Proposal

Implementation of an industry-specific enterprise data model and data warehouse for «CUSTOMER» on «PLATFORM»: foundation once, then subject area by subject area with mapping, ETL, KPI sets, reports base and parallel validation

Proposal No: KOMTAS-«CUSTOMER ABBREVIATION»-IDM-B-«YEAR»-«SEQUENCE»

Proposal Date: «dd Month yyyy»

Validity: «proposal date + 1 month»

VARIABLE GLOSSARY — in this template only the fields inside « » change per customer. All other text is fixed.

Identity: «CUSTOMER» short customer name used in the text · «CUSTOMER NAME» full legal name (cover) · «GROUP COMPANIES» group companies in scope; delete the line for a single company · «CUSTOMER ABBREVIATION» short code in the proposal number · «YEAR» year (proposal number; year of a reference project) · «SEQUENCE» proposal sequence number · «dd Month yyyy» proposal date · «proposal date + 1 month» end of validity · «price validity date» latest start date for which the fees stay valid

Context: «CUSTOMER CONTEXT» one paragraph: sector and business lines, current data warehouse and datamarts, main source systems, platform, reporting and KPI problems, regulatory needs, reason for the request · «TRIGGER» reason for the work (e.g. a new data warehouse or the renewal of the current one, a platform migration, a merger, a regulatory programme, inconsistent KPIs across datamarts, a new core system) · «A REF» number and date of the Model Fit Assessment (service A) report, or of the equivalent analysis, on which the proposal is based

Scope: «MODEL» the industry-specific enterprise data model proposed for the chosen industry (generic description; no product or owner name in customer documents) · «PLATFORM» target data warehouse platform and version (e.g. Teradata, Oracle, a cloud data warehouse on Google Cloud or Microsoft Azure) and the ETL tool; see the platform options table · «BAND» sizing band S, M or L from the proposal input form

Industries: «INDUSTRY — BANKING» block of the Banking branch (including participation banks); keep the blocks of the chosen industry only · «INDUSTRY — INVESTMENT BANKING» block of the Investment Banking branch; keep the blocks of the chosen industry only · «INDUSTRY — TELCO» block of the Telco branch; keep the blocks of the chosen industry only · «INDUSTRY — INSURANCE» block of the Insurance branch (health, P&C, life and pension); keep the blocks of the chosen industry only

Commercial: «fee» fee excl. VAT · «amount» payment amount excl. VAT · «day rate» person-day rate (change requests) · «CITY» city where on-site meetings are free of charge

Values: «NUMBER» numeric value (count, days, weeks, months, hours, years, tolerance) · «%» percentage (payment rate, fit ratio) · «FIELD» free text (e.g. the name of a subject area, KPI set or source system, a term agreed separately)

Annex: «REFERENCE PROJECT» further reference project approved for this proposal (no names without permission); otherwise delete the row · «RESULT» measured result of a reference project, only if measured and approved for use; otherwise delete the line

Contacts: «full name» contact name · «title» contact title · «e-mail / phone» contact details

Markers: the industry blocks and the subject area lines are resolved as described in the fill notes on the first page. The orange DIGITALLENCY DOĞRULASIN and DAMALINK DOĞRULASIN tags mark draft statements to be verified before use. FILL NOTE boxes are internal and are deleted before sending.

Contents

FILL NOTE — this template is for service B (Model Implementation) of the Industry Data Models package: the foundation is built once at a fixed fee, and each subject area is added at its own fixed fee. It is based on the Model Fit Assessment (service A, «A REF»); without an assessment, a short fit check is added to P0 and the effort is reassessed.

Subject area lines: Table 5, Table 11 and Table 17 have one line per subject area. Copy a line for each subject area of the roadmap in «A REF» and delete the unused lines.

Industries: every heading, paragraph, table row and bullet starting with «INDUSTRY — BANKING», «INDUSTRY — INVESTMENT BANKING», «INDUSTRY — TELCO» or «INDUSTRY — INSURANCE» belongs to that industry branch. Keep the blocks of the industry chosen in P0, delete the others and then delete the remaining block markers. Annex 1 keeps only the page of the chosen industry.

Model and platform: «MODEL» is always described as an industry-specific enterprise data model; no product, brand or owner name of a model is written into a customer document. «PLATFORM» is the target data warehouse platform and ETL tool (Table 7). Licences of the platform are not part of this proposal; the licence terms of «MODEL», if any, are entered as «FIELD» after they are clarified internally.

Statements followed by an orange tag are draft assumptions of the package and are verified before the template is used. DIGITALLENCY DOĞRULASIN: the Banking, Investment Banking and Telco branches (subject areas, KPI sets, regulatory links, references), the A / B / C structure, the general method and the efforts and bands. DAMALINK DOĞRULASIN: the Insurance branch (domains, datamarts, KPI set, analytics use cases, warehouse rules, delivery documents, insurance effort and the insurance references). After verification only the tag is deleted. No proposal is sent with a tag in it.

Order of completion: industry (Table 3) → subject areas (Table 5) → sizing values and band (Table 6) → «PLATFORM» (Table 7) → tolerance of the parallel validation (Section 3.6) → timeline (Section 4.2) → effort and fees (Section 9) → Annex 1 and Annex 3 → remaining « » fields. No commercial figures other than the fees in Section 9 are written into this proposal.

1. Purpose

1.1 Background and Aim

«CUSTOMER CONTEXT»

The aim of this proposal is to build the industry-specific enterprise data model adapted in the Model Fit Assessment («A REF») as the enterprise data warehouse of «CUSTOMER» on «PLATFORM», and to load it from the sources so that the agreed KPIs give the same results as the current reports, or the differences are explained. The reason for the work is «TRIGGER».

The work starts with the foundation, which all subject areas share, and then adds the subject areas one by one in the order of the roadmap. Each subject area is accepted on its own, so that the business can use it before the next one is finished.

1.2 External Triggers

The work is usually started by one or more of the triggers below.

Trigger	What It Requires from the Data Model
A new data warehouse or the renewal of the current one	A tested sector model as the starting point instead of a design from a blank page «DIGITALLENCY DOĞRULASIN»
Platform migration, for example from on-premises to the cloud	Adoption of the model while the warehouse is rebuilt anyway
Merger or acquisition	A common model into which the data of both companies is brought
Regulatory programme	Consistent and traceable data from which regulatory reports can be fed
Inconsistent KPIs across datamarts	One definition per KPI on shared core entities
New core system	Source mapping to a stable model instead of rebuilding every report

Table 1 — External triggers.

1.3 Service Structure

The package is offered as three services. This proposal covers service B.

Service	Focus	Result	Pricing
A — Model Fit Assessment	Current landscape, fit mapping of sources and KPIs to the model, gap analysis with a fit ratio per subject area, adapted logical model draft, platform choice, implementation roadmap; 4 to 8 weeks «DIGITALLENCY DOĞRULASIN»	Fit/gap matrix, fit ratio table, adapted logical model draft, KPI mapping, roadmap and estimate for B	Fixed fee
B — Model Implementation	Foundation once (physical model, core entities, standards, historisation, ETL framework, data quality checks, semantic layer base), then subject area by subject area: mapping, ETL, KPI set, reports base, parallel validation	Industry model and EDW running on «PLATFORM»; KPIs reconciled with the current reports	Fixed fee for the foundation and per subject area
C — Extension	C1: a new subject area, KPI set or source, one-time per item. C2 (optional): monthly run and model maintenance	Model extended as the business changes	C1 fixed fee per item; C2 monthly fee

Table 2 — Service structure. This proposal covers service B.

At the end of the work, «CUSTOMER» has the industry model running on «PLATFORM» with the subject areas in scope, loads that run on schedule, KPI sets reconciled with the current reports, a reports base and the documents needed to run and extend the model.

2. Scope

2.1 Prerequisite

This proposal is based on the Model Fit Assessment «A REF»: its adapted logical model draft, fit ratio table, platform choice and roadmap. Changes to these after the proposal are handled as change requests.

2.2 Industry

Industry	Subject Areas	KPI Sets	Regulation
«INDUSTRY — BANKING» Banking, including participation banks	Party, event, channel, campaign, media, contract; to be confirmed in A: product, account, collateral, general ledger «DIGITALLENCY DOĞRULASIN»	Customer 360; sales and profitability; campaign and marketing; to be confirmed: risk and regulatory feed	BDDK; specifics of interest-free products for participation banks
«INDUSTRY — INVESTMENT BANKING» Investment Banking	Customer and account, order and transaction, portfolio and position, instrument, market data, fee and commission, channel	Trading volume, commission income, assets under management and portfolio, active customers, channel share	SPK, MKK
«INDUSTRY — TELCO» Telecommunications	Party, event, finance, network, contract, product; to be confirmed in A: usage (CDR), billing	Churn, ARPU, usage, campaign response	BTK
«INDUSTRY — INSURANCE» Insurance: health, P&C, life and pension	About 30 warehouse domains, among them policy, policyholder and insured, coverage, claim, provision, product, agency and agent, reinsurance, coinsurance, commission account; datamarts for customer value, segmentation, sales, fraud and health «DAMALINK DOĞRULASIN»	Renewal rate, loss and combined ratios, hit ratio, STP rate, provision speed, earned premium, budget tracking	SEDDK

Table 3 — Industry branches. Keep only the row of the chosen industry; details are in Annex 1.

2.3 Foundation

The foundation is built once and is shared by all subject areas. It covers the components below. «DIGITALLENCY DOĞRULASIN»

#	Component	Content
1	Physical model	Physical model for «PLATFORM» derived from the adapted logical model: tables, keys, partitioning and indexing, custom tables
2	Core entities	Party, product, time and organisation, shared by all subject areas, loaded from their sources
3	Standards	Naming and loading standards; definitions for all tables and columns
4	Historisation	History rules per entity type; initial load of history up to the agreed depth
5	ETL framework	Parametric loads, delta detection, restart and recovery, load log and row counts
6	Data quality checks	Technical checks on every load (completeness, keys, references, formats) with a result log
7	Semantic layer base	Shared dimensions and the base of the semantic layer in the BI tool of «CUSTOMER»
8	Environments and deployment	Development, test and production set-up on «PLATFORM», deployment procedure

Table 4 — Foundation components.

2.4 Subject Areas in Scope

The subject areas below are implemented in the order of the roadmap in «A REF». Each subject area has its own band, effort and fee.

#	Subject Area	KPI Set	Main Sources	Band
1	«FIELD»	«FIELD»	«FIELD»	«BAND»
2	«FIELD»	«FIELD»	«FIELD»	«BAND»
3	«FIELD»	«FIELD»	«FIELD»	«BAND»
…	«FIELD»	«FIELD»	«FIELD»	«BAND»

Table 5 — Subject areas in scope. One line per subject area.

2.5 Sizing Basis

Sizing Driver	Value	Source
Subject areas in scope	«NUMBER»	Statement of «CUSTOMER»
Source systems	«NUMBER»	Statement of «CUSTOMER»
Data volume (TB)	«NUMBER»	Statement of «CUSTOMER»
History depth (years)	«NUMBER»	Statement of «CUSTOMER»
KPIs	«NUMBER»	Statement of «CUSTOMER»
Model customisation	«FIELD»	Fit ratio table of «A REF»

Table 6 — Values on which sizing is based. Band: «BAND». The values are checked in P0.

FILL NOTE — take the values and the band from the proposal input form (industry-data-models-3b-implementation-girdi-formu). Draft band drivers:

Subject areas: S ≤3 · M 4–7 · L >7. Source systems: S ≤5 · M 6–15 · L >15. Data volume (TB): S ≤5 · M 5–50 · L >50. History depth (years): S ≤2 · M 3–5 · L >5. KPIs: S ≤50 · M 51–200 · L >200. Model customisation: S low · M medium · L high. Band rule: the highest band reached by at least three drivers. «DIGITALLENCY DOĞRULASIN»

2.6 Platform Options

The target platform was chosen in «A REF». The options are:

Area	On-premises	Cloud
Data warehouse platform	Teradata, Oracle, SQL Server	Cloud data warehouse on Google Cloud (BigQuery) or Microsoft Azure («FIELD»)
ETL	Informatica PowerCenter or the ETL tool of «CUSTOMER»	Informatica IDMC or the native services of the cloud provider («FIELD»)
Semantic layer and BI	BI tool of «CUSTOMER» («FIELD»)	BI tool of «CUSTOMER» («FIELD»)
Target platform of «CUSTOMER»	«PLATFORM»	—

Table 7 — Platform options. Target platform: «PLATFORM».

2.7 Boundaries to Other Services

This service builds the industry data model and the enterprise data warehouse. The regulatory reporting service builds the regulatory reporting chain on top of it: the common regulatory layer, the data demand layer and the data quality and validation controls of the reports; the model built here can feed that chain. The DWH Assessment service evaluates the overall data platform and defines its target state; this service implements an industry model once that target is set. The two services are proposed separately where they are needed.

3. Approach

3.1 Delivery Approach

The work follows the sequence: Foundation → Subject areas → Parallel validation → Handover. «DIGITALLENCY DOĞRULASIN»

- **Foundation:** physical model, core entities, standards, historisation, ETL framework, data quality checks and semantic layer base (Table 4).
- **Subject areas:** for each subject area, mapping, ETL, KPI set and reports base, in the order of the roadmap; subject areas can overlap once the foundation is in place.
- **Parallel validation:** the KPIs of each subject area are reconciled with the current reports before acceptance.
- **Handover:** documents, operating instructions and knowledge transfer to the warehouse team of «CUSTOMER».

3.2 Physical Model and Core Entities

The adapted logical model is turned into a physical model for «PLATFORM»: data types, keys, partitioning and indexing are chosen for the platform, and the customisations of «CUSTOMER» are placed in custom tables so that the core tables of the model stay unchanged. The core entities party, product, time and organisation are loaded first, because every subject area refers to them; for party, the identification and matching rules of «CUSTOMER» are applied. «DIGITALLENCY DOĞRULASIN»

3.3 Standards, Historisation and ETL Framework

All tables follow the same naming and loading standards (accelerator 3, Annex 2): standard header attributes on every table, definitions for all tables and columns, default values for empty columns and trimmed strings. History is kept according to the rules of each entity type, and the initial load covers the history depth agreed in Table 6. The loads are built on a parametric ETL framework (accelerator 4, Annex 2) with full and delta loads, restart and recovery after a failed load, and a load log with row counts used in the reconciliation. «DAMALINK DOĞRULASIN»

3.4 Subject Area Cycle

Each subject area goes through the same cycle: «DIGITALLENCY DOĞRULASIN»

Step	Content	Output
Mapping	Source-to-target matrix for every entity of the subject area (accelerator 2, Annex 2), reviewed with the business owner	Approved mapping
ETL	Loads built on the ETL framework, initial load of history, daily or agreed load cycle	Loads running in test
KPI set	KPIs of the subject area calculated on the model with the agreed definitions	KPI definitions and calculations
Reports base	Semantic layer objects and base reports for the KPI set	Base reports
Test and parallel validation	Technical tests, then reconciliation of the KPIs with the current reports (Section 3.6)	Reconciliation report
Acceptance	Acceptance of the subject area and move to production	Accepted subject area

Table 8 — Subject area cycle.

3.5 Data Quality and Semantic Layer

Technical data quality checks run with every load: completeness, key uniqueness, referential integrity and formats. Rows that fail are logged and reported; they do not stop the load unless the rule is marked as blocking. In the BI tool of «CUSTOMER», the shared dimensions and the KPI definitions are set up once in the semantic layer, so that all reports use the same definitions. «DIGITALLENCY DOĞRULASIN»

3.6 Parallel Validation

Before a subject area is accepted, its KPIs are calculated on the model and on the current reports for the same periods, over at least «NUMBER» load cycles. A KPI is reconciled when the difference is within the tolerance of «NUMBER» per cent agreed for it, or when the difference is explained and accepted by the business owner, for example because the current report uses a different definition. «DIGITALLENCY DOĞRULASIN»

3.7 Industry-Specific Points

The build covers points specific to the chosen industry:

Industry	Specific Points
«INDUSTRY — BANKING»	Feeds for BDDK reporting; interest-free products, profit-share accounts and funds of participation banks; Customer 360 on a single party view (P1 – P3) «DIGITALLENCY DOĞRULASIN»
«INDUSTRY — INVESTMENT BANKING»	Feeds for SPK and MKK reporting; history of orders, transactions and positions; instrument and market data from external providers
«INDUSTRY — TELCO»	Volume of usage records (CDR) and the history kept; feeds for BTK reporting; churn and ARPU definitions agreed with the business
«INDUSTRY — INSURANCE»	Lines of business (health, P&C, life and pension) and their core systems; policy, claim and provision history; external data sources of the sector; multi-currency; feeds for SEDDK reporting; single customer across lines of business «DAMALINK DOĞRULASIN»

Table 9 — Industry-specific points. Keep only the row of the chosen industry.

4. Activities and Timeline

4.1 Phases and Exit Criteria

The work is carried out in five phases; P2 and P3 repeat for each subject area. «DIGITALLENCY DOĞRULASIN»

Phase	Activities	Exit Criterion
P0 Mobilisation and design confirmation	Plan, access, environments, confirmation of the adapted logical model and the subject area order	Plan and design approved; environments ready
P1 Foundation	Physical model, core entities, standards, historisation, ETL framework, data quality checks, semantic layer base	Foundation accepted (Table 13)
P2 Subject areas	Mapping, ETL, KPI set and reports base per subject area	Subject area tested
P3 Parallel validation	Reconciliation of the KPIs with the current reports per subject area	Subject area accepted and in production
P4 Handover	Documents, operating instructions, knowledge transfer, hypercare of «NUMBER» weeks	Handover signed

Table 10 — Phases and exit criteria.

4.2 Timeline

FILL NOTE — the duration follows the band, the number of subject areas and the team. Subject areas can overlap once the foundation is accepted.

Draft: P0 2 weeks; foundation S 6 · M 10 · L 14 weeks; each subject area including parallel validation S 4 · M 6 · L 9 weeks; P4 2 weeks. «DIGITALLENCY DOĞRULASIN»

Phase	Work Step	Weeks
P0	Mobilisation and design confirmation	«NUMBER»
P1	Foundation	«NUMBER»
P2 – P3	Subject area 1 «FIELD»	«NUMBER»
P2 – P3	Subject area 2 «FIELD»	«NUMBER»
P2 – P3	Subject area … «FIELD»	«NUMBER»
P4	Handover	«NUMBER»
	Total, with overlaps	«NUMBER»

Table 11 — Timeline. Band: «BAND». One line per subject area.

The timeline applies provided the assumptions in Section 7 hold. Delays in access, in source data or in the availability of the business owners move the timeline by the same amount.

5. Deliverables and Acceptance

5.1 Deliverables

Documents are delivered in Turkish, in editable format (Microsoft Word / Excel / PowerPoint) together with a PDF copy. Models, code and configurations are delivered in the environments and the version control of «CUSTOMER».

#	Deliverable	Phase	Content
D1	Project plan and confirmed design	P0	Plan, subject area order, confirmed logical model «DIGITALLENCY DOĞRULASIN»
D2	Physical model	P1	Physical model for «PLATFORM» with custom tables, deployed in all environments
D3	Standards document	P1	Naming and loading standards, historisation rules
D4	ETL framework and foundation loads	P1	Parametric framework, core entity loads, data quality checks, semantic layer base
D5	Source-to-target matrices	P2	One per subject area
D6	Subject area loads, KPI sets and reports base	P2	Per subject area, in production after acceptance
D7	Reconciliation reports	P3	KPIs on the model against the current reports, differences and their explanation
D8	Data model document	P4	Entities, attributes, definitions and relations of the implemented model
D9	Operating documents and handover	P4	Load schedule, restart and recovery instructions, knowledge transfer record, handover sign-off

Table 12 — Deliverables.

5.2 Acceptance

Item	Acceptance Criterion
Foundation	Physical model deployed; core entities loading on schedule; data quality checks running with a result log «DIGITALLENCY DOĞRULASIN»
Each subject area	Agreed KPIs reconciled with the current reports within the tolerance of «NUMBER» per cent or with accepted explanations; loads running on schedule for «NUMBER» consecutive cycles
Handover	Documents D8 – D9 delivered; knowledge transfer sessions held

Table 13 — Acceptance criteria.

Each item is reviewed by «CUSTOMER» within «NUMBER» working days of delivery. If no written objection is received in that period, the item is deemed accepted.

6. Customer Responsibilities

«CUSTOMER» is responsible for the items below. A delay in any of them moves the timeline by the same amount.

- Appoint a project manager and a business owner for each subject area, who are available throughout the work.
- Provide the development, test and production environments on «PLATFORM», the ETL and BI tools and their licences, and access to the sources, within «NUMBER» working days from the start of P0.
- Make the owners of the source systems available for the mapping and for questions on source data; correct data errors in the sources.
- Provide the current reports and their results for the parallel validation, and decide on KPI differences within «NUMBER» working days.
- Make the warehouse team available for the knowledge transfer and the handover.

The participation expected from «CUSTOMER» is: «DIGITALLENCY DOĞRULASIN»

Role	Expected Contribution	Participation
Project manager	Plan, decisions, acceptance	P0 – P4
Business owners per subject area	Mapping review, KPI definitions, parallel validation	P2 – P3
Warehouse team	Design review, tests, knowledge transfer	P0 – P4
Source system owners	Source data, extracts, data errors	P1 – P2
Platform and BI administrators	Environments, deployment, scheduling, users	P0 – P1, P4

Table 14 — Expected participation of «CUSTOMER». Total expected effort is «NUMBER» person-days.

7. Assumptions and Out of Scope

7.1 Assumptions

The duration, effort and fee in this proposal are based on the assumptions below. If they do not hold, the impact is assessed through a change request.

- The work starts within «NUMBER» working days of contract signature.
- Each subject area covers up to «NUMBER» sources and «NUMBER» KPIs as stated in Table 5; the reports base covers up to «NUMBER» base reports per subject area. «DIGITALLENCY DOĞRULASIN»
- The adapted logical model of «A REF» is the basis of the build. Customisations beyond it are handled as change requests.
- Source data is provided through extracts or direct read access; the loads run in the scheduler of «CUSTOMER».
- The work is carried out on site in «CITY» and remotely as agreed in P0.
- The working language and the language of the deliverables is Turkish.

7.2 Out of Scope

The topics below are outside the scope of this proposal. If requested, they are assessed and proposed separately. «DIGITALLENCY DOĞRULASIN»

- Changes to source systems and correction of source data errors.
- Rebuilding of the full BI report portfolio beyond the reports base.
- The regulatory reporting chain (separate service).
- Platform licences, infrastructure and their administration.
- Licence fees of «MODEL», if any: «FIELD».
- Operation of the warehouse after the hypercare period (service C2 or a separate operations service).

8. Team

8.1 Komtaş Team

Role	Responsibility	Participation
Engagement Lead	Plan, steering, acceptance, risks	P0 – P4 «DIGITALLENCY DOĞRULASIN»
Industry Data Modeller / Architect	Physical model, standards, core entities, design authority	P0 – P3
ETL Developers («NUMBER»)	ETL framework, foundation and subject area loads, data quality checks	P1 – P4
BI Developer	Semantic layer, KPI calculations, reports base	P1 – P3
Business Analyst with sector knowledge	Source-to-target matrices, KPI definitions, parallel validation	P0 – P3

Table 15 — Komtaş team and roles.

- If a change in the team is needed, the replacement has at least equivalent qualifications and is notified to «CUSTOMER» in advance.

8.2 Governance

- Weekly progress meeting on progress per subject area, open items and timeline.
- Monthly steering meeting with the sponsor.
- Design decisions recorded by the design authority; any issue that affects the timeline or the scope is reported in writing in the week it is found.

8.3 Risks

Risk	Impact	Mitigation
Customisation requests during the build	Scope and timeline grow	Requests through the design authority; changes beyond «A REF» as change requests
Source data quality	KPIs do not reconcile	Data quality checks from the first load; errors reported to the source owners
Current reports use different definitions	Parallel validation takes longer	Differences explained and decided by the business owner
Business owners with sector knowledge not available	Mapping and validation delayed	Owners and their time agreed per subject area in P0
Environments or access delayed	Timeline moves	Requests submitted in P0

Table 16 — Risks.

Any request that affects the scope, the timeline or the fee is handled through a written change request. It is not carried out before its impact and fee are approved.

9. Effort and Fees

FILL NOTE — take the bands and the effort from the proposal input form (industry-data-models-3b-implementation-girdi-formu). Fees are entered by sales. Draft values:

Foundation: S ~60 pd · M ~100 pd · L ~150 pd. Each subject area: S ~40 pd · M ~70 pd · L ~110 pd. Parallel validation is added per subject area according to its cycles. «DIGITALLENCY DOĞRULASIN»

Insurance branch: the same bands apply; the domain catalogue and the warehouse rules (accelerators 3, 4 and 6) are used in the foundation. «DAMALINK DOĞRULASIN»

The values are not based on recorded effort. Delete this box before sending.

9.1 Fees

Service B is offered at a fixed fee for the foundation and a fixed fee for each subject area, based on the sizing values in Table 6 and the assumptions in Section 7.

Item	Band	Effort (pd)	Fee (excl. VAT)
P0 and P1 — Mobilisation and foundation	«BAND»	«NUMBER»	«fee»
Subject area 1 «FIELD», including parallel validation	«BAND»	«NUMBER»	«fee»
Subject area 2 «FIELD», including parallel validation	«BAND»	«NUMBER»	«fee»
Subject area … «FIELD», including parallel validation	«BAND»	«NUMBER»	«fee»
P4 — Handover and hypercare	—	«NUMBER»	«fee»
Total service B	—	«NUMBER»	«fee»
Change requests	—	Per person-day	«day rate»

Table 17 — Fees. One line per subject area. All fees exclude VAT.

9.2 Payment Schedule

Payment Item	Rate	Amount (excl. VAT)
Contract signature	«%»	«amount»
Acceptance of the foundation (Table 13)	«%»	«amount»
Acceptance of each subject area (Table 13)	Fee of the subject area	«amount»
Handover sign-off	«%»	«amount»

Table 18 — Payment schedule. All fees exclude VAT.

9.3 Not Included in the Fee

- Extensions (service C) and operation after the hypercare period.
- Platform, ETL and BI licences and infrastructure; licence fees of «MODEL», if any.
- Travel and accommodation outside «CITY».
- Additional work approved through change requests.

10. Next Step

Once the model is in production, the usual follow-on work is:

Need	Follow-On Work
New subject areas, KPI sets or sources	Service C1 Extension, one-time per item
Monthly run and model maintenance	Service C2, or the data platform operations service of Komtaş
Regulatory reports fed from the model	Regulatory reporting service
Existing datamarts moved onto the model	Datamart consolidation service
One customer record behind Customer 360	Master data management service

Table 19 — Follow-on work.

Service C can be proposed together with this proposal, so that new requests and the run of the model continue without a gap after the handover.

11. Commercial Terms

11.1 General Terms

- All fees in this proposal are stated in Turkish lira and exclude VAT. Statutory taxes, duties and charges are not included in the fees.
- The proposal is valid until «proposal date + 1 month».
- The fees are valid on condition that the work starts by «price validity date». If the start moves beyond that date for any reason, the fees and pricing terms are reassessed by mutual agreement in the light of the economic and financial conditions at the time of the work.
- This work is offered at a fixed fee for the foundation and a fixed fee for each subject area, based on the sizing values in Table 6 and the assumptions in Section 7. Subject areas can be added or removed before their mapping starts, at the fees in Table 17.
- The start date of the work is agreed with «CUSTOMER». On-site work and meetings take place within «CITY».
- Decisions on the scope, on the KPI definitions and on the acceptance of the deliverables remain with «CUSTOMER». «CUSTOMER» remains the data controller for any personal data accessed in the work.
- Payment follows the payment schedule in Section 9. Invoices are payable within «NUMBER» days of the invoice date.
- Scope changes are managed through a written change request; no change is implemented before its impact analysis is approved.
- The parties keep confidential all information they access within the scope of the work. A separate non-disclosure agreement is signed where needed.

- The rights of use of the deliverables prepared for «CUSTOMER», including the adapted logical and physical models, mappings, ETL code and documents, belong to «CUSTOMER»; Komtaş retains its intellectual property rights in its methodology, templates, accelerators and general know-how. The rights of use and the licence terms of «MODEL» and of the accelerators in Annex 2 are «FIELD».
- This proposal forms an integral annex to the contract to be signed by the parties. In the event of a conflict between the contract and the proposal, the contract prevails.

11.2 Proposal Contact Details

Questions on this proposal and its scope can be addressed to the contacts below.

Area of Responsibility	Full Name	Title	Contact
Commercial	«full name»	«title»	«e-mail / phone»
Technical	«full name»	«title»	«e-mail / phone»

11.3 Proposal Annexes

This proposal is submitted with the following annexes:

- ANNEX-1 — Industry Data Model Content
- ANNEX-2 — Accelerators
- ANNEX-3 — About Komtaş

ANNEX-1 — Industry Data Model Content

This annex describes the content of the industry-specific enterprise data model for each industry branch. Keep only the page of the industry chosen in P0. The content is adapted to «CUSTOMER» in the Model Fit Assessment.

1. «INDUSTRY — BANKING» Banking

Item	Content
Subject areas	Party (customer, prospect, employee, organisation and their relationships), event (transactions and interactions), channel, campaign, media, contract (agreements between the bank and its customers) «DIGITALLENCY DOĞRULASIN»
To be confirmed in A	Product, account, collateral, general ledger
KPI sets	Customer 360 (products held, channel use, value and profitability per customer); sales and profitability; campaign and marketing (response, conversion, cost per campaign); to be confirmed: risk and regulatory feed
Regulatory link	BDDK reporting; for participation banks, interest-free products, profit-share accounts and funds
Typical sources	Core banking, cards, loans, treasury, digital channels, CRM and campaign tools
Related services	Regulatory reporting (fed from the model); master data management for the customer golden record behind Customer 360

Table 20 — Banking: model content.

2. «INDUSTRY — INVESTMENT BANKING» Investment Banking

Item	Content
Subject areas	Customer and account, order and transaction, portfolio and position, instrument, market data, fee and commission, channel «DIGITALLENCY DOĞRULASIN»
To be confirmed in A	All subject areas above are confirmed against the model in A
KPI sets	Trading volume, commission income, assets under management and portfolio, active customers, channel share
Regulatory link	SPK and MKK reporting
Typical sources	Brokerage and order systems, custody, fund management, market data providers, digital channels
Related services	Regulatory reporting (fed from the model)

Table 21 — Investment banking: model content.

3. «INDUSTRY — TELCO» Telecommunications

Item	Content
Subject areas	Party (subscriber, customer, dealer, organisation), event (calls, sessions, interactions), finance, network (elements, locations, capacity), contract (subscriptions and agreements), product (tariffs, packages, services) «DIGITALLENCY DOĞRULASIN»
To be confirmed in A	Usage (CDR), billing
KPI sets	Churn, ARPU, usage, campaign response
Regulatory link	BTK reporting
Typical sources	Billing, CRM, mediation and usage records, network inventory, order management, dealer and digital channels
Related services	Master data management for the subscriber and customer golden record

Table 22 — Telecommunications: model content.

4. «INDUSTRY — INSURANCE» Insurance

Item	Content
Architecture	Operational systems of each line of business and external sources → extraction (CDC, ETL, batch) → staging → warehouse → datamarts → BI, CRM and advanced analytics; a data management layer for integration, quality, master data, metadata and security «DAMALINK DOĞRULASIN»
Health	Policy and group policy, customer, policyholder and insured, coverage, underwriting, product, provision, network and institution, agency, third-party administrator
P&C	Customer, policy and group policy, policyholder and insured, coverage, claim, product, property, network, service
Life and pension	Customer, policy, policyholder and insured, coverage, claim and loss event, product, agent, reinsurance, commission account, booking basis
Warehouse domains	About 30 domains, among them agency, agent, bank, building, business partner, claim, coinsurance, commission account, company, coverage, customer, damage, insured, litigation, location, loss event, network, policy, policyholder, product, property, provision, reinsurance, underwriting, vehicle
External sources	Sector information centres, identity and address registers, credit bureau, marketing data (messages, social media, calls, campaigns)

Table 23 — Insurance: architecture and domains.

Item	Content
Datamarts	Customer value management (one customer across lines of business), VIP customer, retail customer segmentation, call centre performance, fraud, health (provision and underwriting performance), sales (by region, agent, channel and line of business; plan against actual), cross-selling and penetration, agency incentive «DAMALINK DOĞRULASIN»
KPI sets	New, lost and existing customers and policies; renewal rate; loss and combined ratios; hit ratio from quote to policy; STP rate; provision speed; production performance; exposure and earned premium; budget tracking (net earned premium, gross and net loss ratios, combined ratio; month to date and year to date)
Analytics use cases	Complaint and feedback analytics; geographic and weather risk; social media interaction; renewal prediction for health policies
Warehouse rules	Historisation; full and delta loads; definitions for all tables and columns; multi-company, multi-currency and multi-language; core tables are not changed, specific attributes go to custom tables
Regulatory link	SEDDK reporting
Related services	Master data management for one customer across group companies and lines of business

Table 24 — Insurance: datamarts, KPIs and rules.

ANNEX-2 — Accelerators

The work uses six accelerators: templates, standards, an ETL framework and catalogues that shorten the analysis and the build. Each accelerator is described below with the place where it is used in this service. Accelerator 5 applies to banking, investment banking and telecommunications, accelerator 6 to insurance.

1. Fit/Gap Matrix Template

Item	Description
Purpose	Record for every source entity, attribute and KPI where it fits the model, what is missing and what has to be customised «DIGITALLENCY DOĞRULASIN»
Content	One row per source entity, attribute or KPI: source, model subject area and entity, fit class (fits, fits with change, gap), gap type (in the model but not in the sources; in the sources but not in the model), customisation need, priority; fit ratio per subject area
Use in this service	P0: confirmation of the adapted logical model and of the custom tables from «A REF»

Table 25 — Fit/Gap Matrix Template.

2. Source-to-Target Matrix Template

Item	Description
Purpose	Specify the loading of each model entity from its sources in a form that developers and testers use in the same way «DIGITALLENCY DOĞRULASIN»
Content	Source table and column, transformation rule, target entity and attribute, load type (full or delta), historisation, data quality check and test case for each mapping
Use in this service	P2: mapping of every subject area (Section 3.4)

Table 26 — Source-to-Target Matrix Template.

3. Naming and Loading Standards

Item	Description
Purpose	Keep the physical model and the loads consistent across subject areas and developers «DAMALINK DOĞRULASIN»
Content	Naming conventions for tables, columns, keys and jobs; standard header attributes on every table; delta detection; default values for empty columns and trimmed strings; core tables are not changed and specific attributes go to custom tables; historisation rules
Use in this service	P1: physical model and loads of all subject areas (Section 3.3)

Table 27 — Naming and Loading Standards.

4. Parametric ETL Framework

Item	Description
Purpose	Build the loads of all subject areas on one tested structure for delta loads, parameters and recovery «DAMALINK DOĞRULASIN»
Content	Parameter tables for sources, periods and load windows; delta loads; restart and recovery strategy after a failed load; load log and row counts for reconciliation
Use in this service	P1 – P2: loads of the foundation and of the subject areas (Section 3.3)

Table 28 — Parametric ETL Framework.

5. KPI Catalogues

Item	Description
Purpose	Start the KPI definitions from a catalogue of the sector instead of collecting them report by report «DIGITALLENCY DOĞRULASIN»
Content	KPI catalogues for banking, investment banking and telecommunications: definition, formula, model entities used, granularity and owner of each KPI
Use in this service	P2: KPI sets for banking, investment banking and telecommunications

Table 29 — KPI Catalogues.

6. Insurance Domain and Datamart Catalogue

Item	Description
Purpose	Start an insurance warehouse from a catalogue of domains, datamarts and KPIs built from earlier work «DAMALINK DOĞRULASIN»
Content	Source domains by line of business, about 30 warehouse domains, datamart designs, the insurance KPI set and the set of delivery documents per layer: business requirements, analysis, design, technical architecture, source-to-target matrix, data model document, technical and operational documents
Use in this service	P1 – P2: domains, datamarts and KPI set for insurance; delivery documents

Table 30 — Insurance Domain and Datamart Catalogue.

ANNEX-3 — About Komtaş

> *FILL NOTE — the figures in Table 31 and in the bullets below come from the proposals of 2026. Check them against the current corporate profile before sending.*

Komtaş is an independent information technology company that has specialised in enterprise data management in Türkiye since 1989. More than 35 years of focus on a single field has given it an end-to-end view that follows data from the moment it is created to the moment a decision is taken.

Indicator	Value
Founded	1989 — more than 35 years of continuous data-focused activity
Specialist staff	250+ data engineers, architects, consultants and analysts
Offices	Istanbul, Ankara, Izmir, Dubai
Strategic partnerships	10+ global technology vendors
Focus area	Data governance, data architecture, analytics, artificial intelligence and AI agent based solutions
Positioning	"From Data to Agents" — integrated capability from data to AI agents

Table 31 — Komtaş corporate profile.

Service Capabilities

The service portfolio of Komtaş covers the whole life cycle of a data initiative:

- **Data Governance and Data Management:** data governance maturity assessment, framework and organisation design, policy and process design, data catalogue, business glossary, data quality management, master data management, data privacy and classification.
- **Data Architecture and Engineering:** data warehouse and data lake architectures, lakehouse design, data integration and streaming architectures, cloud and on-premises modernisation.
- **Analytics and Artificial Intelligence:** enterprise reporting, advanced analytics, machine learning models, generative AI applications and AI governance.
- **Managed Services and Support:** P1 / P2 / P3 support for production systems, capacity and performance management, continuous improvement services.
- **Training and Capability Building:** product training, role-based data governance training, train-the-trainer programmes.

Industry Data Model Experience

> *FILL NOTE — the references in Tables 32 and 33 are anonymous. Do not add institution names, system names, model names, partner names, contact persons or result figures without written approval; «YEAR» is filled once the year of the work is confirmed, «RESULT» is deleted if no measured result is approved, and the «REFERENCE PROJECT» row is deleted if there is no approved reference. Keep only the table of the chosen industry.*

Data warehouse work on industry data models is listed below. Reference calls can be arranged on request, subject to the approval of the institutions concerned.

Institution	Work	Measured Result	Year
«INDUSTRY — INVESTMENT BANKING» Three investment firms	Investment banking data warehouse on an industry data model «DIGITALLENCY DOĞRULASIN»	«RESULT»	«YEAR»
«INDUSTRY — TELCO» A telecom group	Enterprise data warehouse on an industry logical data model	«RESULT»	«YEAR»
«INDUSTRY — BANKING» Two participation banks and a Gulf bank	Banking enterprise data warehouse on an industry data model	«RESULT»	«YEAR»

Table 32 — Banking, investment banking and telecommunications references (anonymous).

Institution	Work	Measured Result	Year
«INDUSTRY — INSURANCE» An insurance group	Customer data across the systems of the group companies brought together into a single customer view «DAMALINK DOĞRULASIN»	«RESULT»	«YEAR»
«INDUSTRY — INSURANCE» «REFERENCE PROJECT»	Insurance data warehouse on an industry data model («FIELD»)	«RESULT»	«YEAR»

Table 33 — Insurance references (anonymous).

Why Komtaş

- **Focus:** Komtaş has worked only in the data field for more than 35 years, with more than 250 specialists and 4 offices.
- **From assessment to extension:** the same team assesses the fit, builds the model and extends it later (Section 10).
- **Platforms:** experience with Teradata and Informatica, and Google Cloud Premier partnership, so that the model can be built on-premises or in the cloud.
