Industry Data Models · Service C

Extension

Technical and Commercial Proposal

New subject areas, KPI sets and sources added to the industry data model of «CUSTOMER», with an optional monthly run and model maintenance

Proposal No: KOMTAS-«CUSTOMER ABBREVIATION»-IDM-C-«YEAR»-«SEQUENCE»

Proposal Date: «dd Month yyyy»

Validity: «proposal date + 1 month»

VARIABLE GLOSSARY — in this template only the fields inside « » change per customer. All other text is fixed.

Identity: «CUSTOMER» short customer name used in the text · «CUSTOMER NAME» full legal name (cover) · «GROUP COMPANIES» group companies in scope; delete the line for a single company · «CUSTOMER ABBREVIATION» short code in the proposal number · «YEAR» year (proposal number; year of a reference project) · «SEQUENCE» proposal sequence number · «dd Month yyyy» proposal date · «proposal date + 1 month» end of validity · «price validity date» latest start date for which the fees stay valid

Context: «CUSTOMER CONTEXT» one paragraph: sector and business lines, current data warehouse and datamarts, main source systems, platform, reporting and KPI problems, regulatory needs, reason for the request · «TRIGGER» reason for the work (e.g. a new data warehouse or the renewal of the current one, a platform migration, a merger, a regulatory programme, inconsistent KPIs across datamarts, a new core system) · «A REF» number and date of the Model Fit Assessment (service A) report, or of the equivalent analysis, on which the proposal is based

Scope: «MODEL» the industry-specific enterprise data model proposed for the chosen industry (generic description; no product or owner name in customer documents) · «PLATFORM» target data warehouse platform and version (e.g. Teradata, Oracle, a cloud data warehouse on Google Cloud or Microsoft Azure) and the ETL tool; see the platform options table · «BAND» sizing band S, M or L from the proposal input form · «SUPPORT HOURS» support hours of the optional monthly run and maintenance (e.g. weekdays 09:00–18:00 Türkiye time)

Industries: «INDUSTRY — BANKING» block of the Banking branch (including participation banks); keep the blocks of the chosen industry only · «INDUSTRY — INVESTMENT BANKING» block of the Investment Banking branch; keep the blocks of the chosen industry only · «INDUSTRY — TELCO» block of the Telco branch; keep the blocks of the chosen industry only · «INDUSTRY — INSURANCE» block of the Insurance branch (health, P&C, life and pension); keep the blocks of the chosen industry only

Commercial: «OPTIONAL» item kept or deleted by sales; if kept, delete the marker · «fee» fee excl. VAT · «monthly fee» monthly fee excl. VAT · «amount» payment amount excl. VAT · «day rate» person-day rate (change requests) · «hour rate» hourly rate for work above the monthly hours · «CITY» city where on-site meetings are free of charge

Values: «NUMBER» numeric value (count, days, weeks, months, hours, years, tolerance) · «%» percentage (payment rate, fit ratio) · «FIELD» free text (e.g. the name of a subject area, KPI set or source system, a term agreed separately)

Annex: «REFERENCE PROJECT» further reference project approved for this proposal (no names without permission); otherwise delete the row · «RESULT» measured result of a reference project, only if measured and approved for use; otherwise delete the line

Contacts: «full name» contact name · «title» contact title · «e-mail / phone» contact details

Markers: the industry blocks, the C1 lines and the C2 line are resolved as described in the fill notes on the first page. «OPTIONAL» items are kept or deleted by sales. The orange DIGITALLENCY DOĞRULASIN and DAMALINK DOĞRULASIN tags mark draft statements to be verified before use. FILL NOTE boxes are internal and are deleted before sending.

Contents

FILL NOTE — this template is for service C (Extension) of the Industry Data Models package. C1 adds a new subject area, KPI set or source to a model that is already in production, at a fixed fee per item. C2 is the optional monthly run and model maintenance. The model was normally implemented under service B; if it was implemented by others, a short fit check is added to the first item.

C1 lines: Table 4 and Table 14 have one line per item. Copy a line for each item and delete the unused lines. C2: Section 2.4, Section 3.5, Section 9.2 and every line starting with «OPTIONAL» belong to C2. Keep them only if C2 is offered; otherwise delete them.

Industries: every heading, paragraph, table row and bullet starting with «INDUSTRY — BANKING», «INDUSTRY — INVESTMENT BANKING», «INDUSTRY — TELCO» or «INDUSTRY — INSURANCE» belongs to that industry branch. Keep the blocks of the industry chosen in P0, delete the others and then delete the remaining block markers. Annex 1 keeps only the page of the chosen industry.

Model and platform: «MODEL» is always described as an industry-specific enterprise data model; no product, brand or owner name of a model is written into a customer document. «PLATFORM» is the target data warehouse platform and ETL tool (Table 6). Licences of the platform are not part of this proposal; the licence terms of «MODEL», if any, are entered as «FIELD» after they are clarified internally.

Statements followed by an orange tag are draft assumptions of the package and are verified before the template is used. DIGITALLENCY DOĞRULASIN: the Banking, Investment Banking and Telco branches (subject areas, KPI sets, regulatory links, references), the A / B / C structure, the general method and the efforts and bands. DAMALINK DOĞRULASIN: the Insurance branch (domains, datamarts, KPI set, analytics use cases, warehouse rules, delivery documents, insurance effort and the insurance references). After verification only the tag is deleted. No proposal is sent with a tag in it.

Order of completion: industry (Table 3) → items (Table 4) → sizing values and band (Table 5) → C2 line → timeline (Section 4.2) → effort and fees (Section 9) → Annex 1 and Annex 3 → remaining « » fields. No commercial figures other than the fees in Section 9 are written into this proposal.

1. Purpose

1.1 Background and Aim

«CUSTOMER CONTEXT»

The aim of this proposal is to extend the industry data model of «CUSTOMER» as the business changes: new subject areas, new KPI sets and new sources are added on the same foundation and with the same standards, so that the model stays the single basis of the warehouse and its reports. The reason for the work is «TRIGGER».

Each item is offered and accepted on its own. Where «CUSTOMER» prefers, the monthly run of the loads and the maintenance of the model can be added as an optional monthly service.

1.2 Reasons for an Extension

An extension is usually needed for one or more of the reasons below.

Reason	Typical Item
New product line or business line	New subject area or new entities in an existing one «DIGITALLENCY DOĞRULASIN»
New or replaced source system	New source mapped to the existing model
Regulatory change	New attributes and KPIs for regulatory feeds
New KPI demand from the business	New KPI set on existing subject areas
Merger or acquisition	Sources of the acquired company mapped to the model
Subject areas left for later in the roadmap	Next subject areas of the roadmap

Table 1 — Reasons for an extension.

1.3 Service Structure

The package is offered as three services. This proposal covers service C.

Service	Focus	Result	Pricing
A — Model Fit Assessment	Current landscape, fit mapping of sources and KPIs to the model, gap analysis with a fit ratio per subject area, adapted logical model draft, platform choice, implementation roadmap; 4 to 8 weeks «DIGITALLENCY DOĞRULASIN»	Fit/gap matrix, fit ratio table, adapted logical model draft, KPI mapping, roadmap and estimate for B	Fixed fee
B — Model Implementation	Foundation once (physical model, core entities, standards, historisation, ETL framework, data quality checks, semantic layer base), then subject area by subject area: mapping, ETL, KPI set, reports base, parallel validation	Industry model and EDW running on «PLATFORM»; KPIs reconciled with the current reports	Fixed fee for the foundation and per subject area
C — Extension	C1: a new subject area, KPI set or source, one-time per item. C2 (optional): monthly run and model maintenance	Model extended as the business changes	C1 fixed fee per item; C2 monthly fee

Table 2 — Service structure. This proposal covers service C.

2. Scope

2.1 Prerequisite and Industry

The model of «CUSTOMER» is in production, implemented under service B or an equivalent project («A REF»). The extension uses its foundation, standards and ETL framework. The industry of the model is:

Industry	Subject Areas	KPI Sets	Regulation
«INDUSTRY — BANKING» Banking, including participation banks	Party, event, channel, campaign, media, contract; to be confirmed in A: product, account, collateral, general ledger «DIGITALLENCY DOĞRULASIN»	Customer 360; sales and profitability; campaign and marketing; to be confirmed: risk and regulatory feed	BDDK; specifics of interest-free products for participation banks
«INDUSTRY — INVESTMENT BANKING» Investment Banking	Customer and account, order and transaction, portfolio and position, instrument, market data, fee and commission, channel	Trading volume, commission income, assets under management and portfolio, active customers, channel share	SPK, MKK
«INDUSTRY — TELCO» Telecommunications	Party, event, finance, network, contract, product; to be confirmed in A: usage (CDR), billing	Churn, ARPU, usage, campaign response	BTK
«INDUSTRY — INSURANCE» Insurance: health, P&C, life and pension	About 30 warehouse domains, among them policy, policyholder and insured, coverage, claim, provision, product, agency and agent, reinsurance, coinsurance, commission account; datamarts for customer value, segmentation, sales, fraud and health «DAMALINK DOĞRULASIN»	Renewal rate, loss and combined ratios, hit ratio, STP rate, provision speed, earned premium, budget tracking	SEDDK

Table 3 — Industry branches. Keep only the row of the chosen industry; details are in Annex 1.

2.2 C1 Items

The items below are part of this proposal. Each item has its own band, effort and fee.

#	Type	Item	Main Sources	Band
1	New subject area	«FIELD»	«FIELD»	«BAND»
2	New KPI set	«FIELD»	«FIELD»	«BAND»
3	New source	«FIELD»	«FIELD»	«BAND»
…	«FIELD»	«FIELD»	«FIELD»	«BAND»

Table 4 — C1 items. One line per item.

2.3 Sizing Basis

Sizing Driver	Value	Source
Subject areas in scope	«NUMBER»	Statement of «CUSTOMER»
Source systems	«NUMBER»	Statement of «CUSTOMER»
Data volume (TB)	«NUMBER»	Statement of «CUSTOMER»
History depth (years)	«NUMBER»	Statement of «CUSTOMER»
KPIs	«NUMBER»	Statement of «CUSTOMER»
Model customisation	«FIELD»	Fit check of the item (P0)

Table 5 — Values on which sizing is based. Band: «BAND». The values are checked in P0.

> *FILL NOTE — take the values and the band from the proposal input form (industry-data-models-3c-extension-girdi-formu). Draft band drivers:*
>
> *Subject areas: S ≤3 · M 4–7 · L >7. Source systems: S ≤5 · M 6–15 · L >15. Data volume (TB): S ≤5 · M 5–50 · L >50. History depth (years): S ≤2 · M 3–5 · L >5. KPIs: S ≤50 · M 51–200 · L >200. Model customisation: S low · M medium · L high. Band rule: the highest band reached by at least three drivers.* «DIGITALLENCY DOĞRULASIN»

2.4 «OPTIONAL» C2 Monthly Run and Model Maintenance

C2 covers the monthly run of the loads of the model and its maintenance within a monthly number of hours: monitoring of the loads and restart after failures, data quality results, small changes to entities, mappings, KPIs and reports, platform and source changes that affect the loads, and a monthly report. Work above the monthly hours is charged at the hourly rate. Instead of C2, the run can also be covered by the data platform operations service of Komtaş. «DIGITALLENCY DOĞRULASIN»

2.5 Platform

The extension runs on the platform of the model: «PLATFORM». The platform options are in Table 6.

Area	On-premises	Cloud
Data warehouse platform	Teradata, Oracle, SQL Server	Cloud data warehouse on Google Cloud (BigQuery) or Microsoft Azure («FIELD»)
ETL	Informatica PowerCenter or the ETL tool of «CUSTOMER»	Informatica IDMC or the native services of the cloud provider («FIELD»)
Semantic layer and BI	BI tool of «CUSTOMER» («FIELD»)	BI tool of «CUSTOMER» («FIELD»)
Target platform of «CUSTOMER»	«PLATFORM»	—

Table 6 — Platform options. Target platform: «PLATFORM».

2.6 Boundaries to Other Services

This service builds the industry data model and the enterprise data warehouse. The regulatory reporting service builds the regulatory reporting chain on top of it: the common regulatory layer, the data demand layer and the data quality and validation controls of the reports; the model built here can feed that chain. The DWH Assessment service evaluates the overall data platform and defines its target state; this service implements an industry model once that target is set. The two services are proposed separately where they are needed.

3. Approach

3.1 Item Cycle

Each C1 item goes through the same cycle as a subject area of service B: «DIGITALLENCY DOĞRULASIN»

Phase	Content	Output
P0 Fit check	Item mapped against the model with the fit/gap matrix (accelerator 1, Annex 2); customisation and band confirmed	Confirmed scope and band
P1 Mapping and build	Source-to-target matrix, model changes in custom tables, loads on the ETL framework	Loads running in test
P2 KPIs and reports base	KPI calculations, semantic layer objects and base reports	KPI set and base reports
P3 Validation and acceptance	Reconciliation with the current reports or agreed reference figures; move to production; documents updated	Accepted item

Table 7 — Item cycle.

3.2 New Subject Area

A new subject area is added as in service B: its entities are taken from the industry model where they exist, and specific attributes go to custom tables so that the core tables stay unchanged. Its links to the core entities party, product, time and organisation are set up first. «DIGITALLENCY DOĞRULASIN»

3.3 New KPI Set and New Source

A new KPI set is defined with the business owner, mapped to the model and calculated on existing subject areas; where an attribute is missing, the item also covers its load. A new source is mapped to the existing entities with a source-to-target matrix; its data is matched to the existing party and product records, and the loads of the subject areas concerned are extended.

3.4 Industry-Specific Points

Items in the chosen industry take the points below into account:

Industry	Specific Points
«INDUSTRY — BANKING»	Feeds for BDDK reporting; interest-free products, profit-share accounts and funds of participation banks; Customer 360 on a single party view (P0 – P3) «DIGITALLENCY DOĞRULASIN»
«INDUSTRY — INVESTMENT BANKING»	Feeds for SPK and MKK reporting; history of orders, transactions and positions; instrument and market data from external providers
«INDUSTRY — TELCO»	Volume of usage records (CDR) and the history kept; feeds for BTK reporting; churn and ARPU definitions agreed with the business
«INDUSTRY — INSURANCE»	Lines of business (health, P&C, life and pension) and their core systems; policy, claim and provision history; external data sources of the sector; multi-currency; feeds for SEDDK reporting; single customer across lines of business «DAMALINK DOĞRULASIN»

Table 8 — Industry-specific points. Keep only the row of the chosen industry.

3.5 «OPTIONAL» C2 Monthly Cycle

- Daily: monitoring of the loads, restart after failures, review of the data quality results.
- On request: small changes to entities, mappings, KPIs and reports, logged and agreed with «CUSTOMER».
- Monthly: report on the loads, failures, data quality, changes and hours used; proposal of items for C1.
- Support hours: «SUPPORT HOURS».

4. Activities and Timeline

4.1 Order of the Items

The items are carried out in the order agreed in P0 of the first item. Items that do not depend on each other can overlap.

4.2 Timeline

FILL NOTE — the duration of an item follows its band and type.

Draft: a new subject area as a subject area of service B (S 4 · M 6 · L 9 weeks including validation); a new KPI set or a new source usually 2 to 4 weeks. «DIGITALLENCY DOĞRULASIN»

#	Item	Weeks
1	Item 1 «FIELD»	«NUMBER»
2	Item 2 «FIELD»	«NUMBER»
…	Item … «FIELD»	«NUMBER»
	Total, with overlaps	«NUMBER»

Table 9 — Timeline of the C1 items.

4.3 «OPTIONAL» C2 Term

C2 starts on the date agreed with «CUSTOMER» for an initial term of «NUMBER» months and is extended by «NUMBER» months unless either party gives notice «NUMBER» months before the end of the term.

5. Deliverables and Acceptance

5.1 Deliverables

Documents are delivered in Turkish, in editable format together with a PDF copy. Models, code and configurations are delivered in the environments and the version control of «CUSTOMER».

#	Deliverable	Phase	Content
D1	Fit check per item	P0	Fit/gap of the item, customisation, confirmed band «DIGITALLENCY DOĞRULASIN»
D2	Source-to-target matrix	P1	Per item
D3	Model changes and loads	P1	Physical changes in custom tables, loads on the ETL framework
D4	KPI set and base reports	P2	KPI calculations, semantic layer objects, base reports
D5	Reconciliation report	P3	KPIs against the current reports or reference figures
D6	Updated documents	P3	Data model document, operating instructions
D7	«OPTIONAL» C2 monthly report	C2	Loads, failures, data quality, changes, hours used

Table 10 — Deliverables.

5.2 Acceptance

Item	Acceptance Criterion
Each C1 item	Agreed KPIs reconciled within the tolerance of «NUMBER» per cent or with accepted explanations; loads running on schedule for «NUMBER» consecutive cycles; documents updated «DIGITALLENCY DOĞRULASIN»
«OPTIONAL» C2	Monthly report delivered; hours and changes confirmed by «CUSTOMER»

Table 11 — Acceptance criteria.

Each item is reviewed by «CUSTOMER» within «NUMBER» working days of delivery. If no written objection is received in that period, the item is deemed accepted.

6. Customer Responsibilities

«CUSTOMER» is responsible for the items below. A delay in any of them moves the timeline by the same amount.

- Appoint a business owner for each item and a contact for C2.
- Provide access to the environments of the model, the new sources and the current reports within «NUMBER» working days from the start of each item.

- Make the owners of the source systems available and correct data errors in the sources.
- Decide on KPI definitions and differences within «NUMBER» working days.

The participation expected from «CUSTOMER» is: «DIGITALLENCY DOĞRULASIN»

Role	Expected Contribution	Participation
Business owner per item	Scope, KPI definitions, validation, acceptance	P0, P3
Warehouse team	Design review, tests, deployment	P0 – P3
Source system owners	Source data, extracts, data errors	P1 – P2
«OPTIONAL» C2 contact	Requests, priorities, monthly report	C2

Table 12 — Expected participation of «CUSTOMER». Total expected effort is «NUMBER» person-days per item.

7. Assumptions and Out of Scope

7.1 Assumptions

The duration, effort and fee in this proposal are based on the assumptions below. If they do not hold, the impact is assessed through a change request.

- The first item starts within «NUMBER» working days of contract signature.
- The model in production follows the foundation, standards and ETL framework described in this proposal; if it does not, the effort to align it is assessed in the fit check of the first item. «DIGITALLENCY DOĞRULASIN»
- Each item covers the sources and KPIs stated in Table 4.
- «OPTIONAL» C2 covers «NUMBER» hours per month within «SUPPORT HOURS»; unused hours are not carried over.
- The working language and the language of the deliverables is Turkish.

7.2 Out of Scope

The topics below are outside the scope of this proposal. If requested, they are assessed and proposed separately. «DIGITALLENCY DOĞRULASIN»

- Changes to source systems and correction of source data errors.
- Rebuilding of the full BI report portfolio beyond the base reports of each item.
- The regulatory reporting chain (separate service).
- Platform licences, infrastructure and their administration.
- Licence fees of «MODEL», if any: «FIELD».
- Operations outside «SUPPORT HOURS» and operation of platforms other than the model.

8. Team

8.1 Komtaş Team

Role	Responsibility	Participation
Engagement Lead	Plan, order of the items, acceptance, C2 reporting	P0 – P3, C2 «DIGITALLENCY DOĞRULASIN»
Industry Data Modeller / Architect	Fit check, model changes, design authority	P0 – P1
ETL Developers («NUMBER»)	Mappings and loads; C2 run	P1 – P3, C2
BI Developer	KPI calculations, semantic layer, base reports	P2 – P3
Business Analyst with sector knowledge	Source-to-target matrices, KPI definitions, validation	P0 – P3

Table 13 — Komtaş team and roles.

- If a change in the team is needed, the replacement has at least equivalent qualifications and is notified to «CUSTOMER» in advance.

8.2 Governance

- Progress meeting every two weeks while C1 items run; monthly review of C2.
- Changes to the model are recorded by the design authority, so that the model stays consistent across items.
- Any issue that affects the timeline or the scope is reported in writing in the week it is found.

Any request that affects the scope, the timeline or the fee is handled through a written change request. It is not carried out before its impact and fee are approved.

9. Effort and Fees

> *FILL NOTE — take the bands and the effort from the proposal input form (industry-data-models-3c-extension-girdi-formu). Fees are entered by sales. Draft values:*
>
> *C1 new subject area: as a subject area of service B, S ~40 pd · M ~70 pd · L ~110 pd plus validation; a new KPI set or source is estimated in the fit check. C2: S 40 · M 80 · L 160 hours per month.* «DIGITALLENCY DOĞRULASIN»
>
> *Insurance branch: the same values apply; items are taken from the domain and datamart catalogue (accelerator 6) where possible.* «DAMALINK DOĞRULASIN»
>
> *The values are not based on recorded effort. Delete this box before sending.*

9.1 C1 Fees

Each C1 item is offered at a fixed, one-time fee based on its band and the assumptions in Section 7.

Item	Band	Effort (pd)	Fee (excl. VAT)
Item 1 «FIELD»	«BAND»	«NUMBER»	«fee»
Item 2 «FIELD»	«BAND»	«NUMBER»	«fee»
Item … «FIELD»	«BAND»	«NUMBER»	«fee»
Total C1	—	«NUMBER»	«fee»
Change requests	—	Per person-day	«day rate»

Table 14 — C1 fees. One line per item. All fees exclude VAT.

9.2 «OPTIONAL» C2 Fees

Item	Hours per Month	Fee (excl. VAT)
C2 monthly run and model maintenance, band «BAND»	«NUMBER»	«monthly fee» per month
Work above the monthly hours	Per hour	«hour rate»

Table 15 — C2 fees. All fees exclude VAT.

9.3 Payment Schedule

Payment Item	Rate	Amount (excl. VAT)
Start of each C1 item (P0 exit)	«%»	«amount»
Acceptance of each C1 item (Table 11)	«%»	«amount»
«OPTIONAL» C2, monthly in arrears after the monthly report	Monthly	«monthly fee» per month

Table 16 — Payment schedule. All fees exclude VAT.

9.4 Not Included in the Fee

- Platform, ETL and BI licences and infrastructure; licence fees of «MODEL», if any.
- Travel and accommodation outside «CITY».
- Additional work approved through change requests.

10. Next Step

As the model grows, the usual related work is:

Need	Follow-On Work
Further subject areas, KPI sets or sources	Further C1 items at the fees of this proposal or a new proposal
Run of the whole data platform, not only the model	Data platform operations service of Komtaş
Regulatory reports fed from the model	Regulatory reporting service
Existing datamarts moved onto the model	Datamart consolidation service
Business definitions of the model in a glossary	Data governance service

Table 17 — Follow-on work.

New items are proposed when «CUSTOMER» raises them or when the monthly report of C2 shows a need.

11. Commercial Terms

11.1 General Terms

- All fees in this proposal are stated in Turkish lira and exclude VAT. Statutory taxes, duties and charges are not included in the fees.
- The proposal is valid until «proposal date + 1 month».
- The fees are valid on condition that the work starts by «price validity date». If the start moves beyond that date for any reason, the fees and pricing terms are reassessed by mutual agreement in the light of the economic and financial conditions at the time of the work.
- Each C1 item is offered at a fixed, one-time fee; «OPTIONAL» C2 is charged as a monthly fee, with work above the monthly hours at the hourly rate.
- The start date of each item is agreed with «CUSTOMER». On-site work and meetings take place within «CITY».
- Decisions on the scope, on the KPI definitions and on the acceptance of the deliverables remain with «CUSTOMER». «CUSTOMER» remains the data controller for any personal data accessed in the work.
- Payment follows the payment schedule in Section 9. Invoices are payable within «NUMBER» days of the invoice date.
- Scope changes are managed through a written change request; no change is implemented before its impact analysis is approved.
- The parties keep confidential all information they access within the scope of the work. A separate non-disclosure agreement is signed where needed.
- The rights of use of the deliverables prepared for «CUSTOMER», including the adapted logical and physical models, mappings, ETL code and documents, belong to «CUSTOMER»; Komtaş retains its intellectual property rights in its methodology, templates, accelerators and general know-how. The rights of use and the licence terms of «MODEL» and of the accelerators in Annex 2 are «FIELD».
- This proposal forms an integral annex to the contract to be signed by the parties. In the event of a conflict between the contract and the proposal, the contract prevails.

11.2 Proposal Contact Details

Questions on this proposal and its scope can be addressed to the contacts below.

Area of Responsibility	Full Name	Title	Contact
Commercial	«full name»	«title»	«e-mail / phone»
Technical	«full name»	«title»	«e-mail / phone»

11.3 Proposal Annexes

This proposal is submitted with the following annexes:

- ANNEX-1 — Industry Data Model Content
- ANNEX-2 — Accelerators
- ANNEX-3 — About Komtaş

ANNEX-1 — Industry Data Model Content

This annex describes the content of the industry-specific enterprise data model for each industry branch. Keep only the page of the industry chosen in P0. The content is adapted to «CUSTOMER» in the Model Fit Assessment.

1. «INDUSTRY — BANKING» Banking

Item	Content
Subject areas	Party (customer, prospect, employee, organisation and their relationships), event (transactions and interactions), channel, campaign, media, contract (agreements between the bank and its customers) «DIGITALLENCY DOĞRULASIN»
To be confirmed in A	Product, account, collateral, general ledger
KPI sets	Customer 360 (products held, channel use, value and profitability per customer); sales and profitability; campaign and marketing (response, conversion, cost per campaign); to be confirmed: risk and regulatory feed
Regulatory link	BDDK reporting; for participation banks, interest-free products, profit-share accounts and funds
Typical sources	Core banking, cards, loans, treasury, digital channels, CRM and campaign tools
Related services	Regulatory reporting (fed from the model); master data management for the customer golden record behind Customer 360

Table 18 — Banking: model content.

2. «INDUSTRY — INVESTMENT BANKING» Investment Banking

Item	Content
Subject areas	Customer and account, order and transaction, portfolio and position, instrument, market data, fee and commission, channel «DIGITALLENCY DOĞRULASIN»
To be confirmed in A	All subject areas above are confirmed against the model in A
KPI sets	Trading volume, commission income, assets under management and portfolio, active customers, channel share
Regulatory link	SPK and MKK reporting
Typical sources	Brokerage and order systems, custody, fund management, market data providers, digital channels
Related services	Regulatory reporting (fed from the model)

Table 19 — Investment banking: model content.

3. «INDUSTRY — TELCO» Telecommunications

Item	Content
Subject areas	Party (subscriber, customer, dealer, organisation), event (calls, sessions, interactions), finance, network (elements, locations, capacity), contract (subscriptions and agreements), product (tariffs, packages, services) «DIGITALLENCY DOĞRULASIN»
To be confirmed in A	Usage (CDR), billing
KPI sets	Churn, ARPU, usage, campaign response
Regulatory link	BTK reporting
Typical sources	Billing, CRM, mediation and usage records, network inventory, order management, dealer and digital channels
Related services	Master data management for the subscriber and customer golden record

Table 20 — Telecommunications: model content.

4. «INDUSTRY — INSURANCE» Insurance

Item	Content
Architecture	Operational systems of each line of business and external sources → extraction (CDC, ETL, batch) → staging → warehouse → datamarts → BI, CRM and advanced analytics; a data management layer for integration, quality, master data, metadata and security «DAMALINK DOĞRULASIN»
Health	Policy and group policy, customer, policyholder and insured, coverage, underwriting, product, provision, network and institution, agency, third-party administrator
P&C	Customer, policy and group policy, policyholder and insured, coverage, claim, product, property, network, service
Life and pension	Customer, policy, policyholder and insured, coverage, claim and loss event, product, agent, reinsurance, commission account, booking basis
Warehouse domains	About 30 domains, among them agency, agent, bank, building, business partner, claim, coinsurance, commission account, company, coverage, customer, damage, insured, litigation, location, loss event, network, policy, policyholder, product, property, provision, reinsurance, underwriting, vehicle
External sources	Sector information centres, identity and address registers, credit bureau, marketing data (messages, social media, calls, campaigns)

Table 21 — Insurance: architecture and domains.

Item	Content
Datamarts	Customer value management (one customer across lines of business), VIP customer, retail customer segmentation, call centre performance, fraud, health (provision and underwriting performance), sales (by region, agent, channel and line of business; plan against actual), cross-selling and penetration, agency incentive «DAMALINK DOĞRULASIN»
KPI sets	New, lost and existing customers and policies; renewal rate; loss and combined ratios; hit ratio from quote to policy; STP rate; provision speed; production performance; exposure and earned premium; budget tracking (net earned premium, gross and net loss ratios, combined ratio; month to date and year to date)
Analytics use cases	Complaint and feedback analytics; geographic and weather risk; social media interaction; renewal prediction for health policies
Warehouse rules	Historisation; full and delta loads; definitions for all tables and columns; multi-company, multi-currency and multi-language; core tables are not changed, specific attributes go to custom tables
Regulatory link	SEDDK reporting
Related services	Master data management for one customer across group companies and lines of business

Table 22 — Insurance: datamarts, KPIs and rules.

ANNEX-2 — Accelerators

The work uses six accelerators: templates, standards, an ETL framework and catalogues that shorten the analysis and the build. Each accelerator is described below with the place where it is used in this service. Accelerator 5 applies to banking, investment banking and telecommunications, accelerator 6 to insurance.

1. Fit/Gap Matrix Template

Item	Description
Purpose	Record for every source entity, attribute and KPI where it fits the model, what is missing and what has to be customised «DIGITALLENCY DOĞRULASIN»
Content	One row per source entity, attribute or KPI: source, model subject area and entity, fit class (fits, fits with change, gap), gap type (in the model but not in the sources; in the sources but not in the model), customisation need, priority; fit ratio per subject area
Use in this service	P0: fit check of each item

Table 23 — Fit/Gap Matrix Template.

2. Source-to-Target Matrix Template

Item	Description
Purpose	Specify the loading of each model entity from its sources in a form that developers and testers use in the same way «DIGITALLENCY DOĞRULASIN»
Content	Source table and column, transformation rule, target entity and attribute, load type (full or delta), historisation, data quality check and test case for each mapping
Use in this service	P1: mapping of each item

Table 24 — Source-to-Target Matrix Template.

3. Naming and Loading Standards

Item	Description
Purpose	Keep the physical model and the loads consistent across subject areas and developers «DAMALINK DOĞRULASIN»
Content	Naming conventions for tables, columns, keys and jobs; standard header attributes on every table; delta detection; default values for empty columns and trimmed strings; core tables are not changed and specific attributes go to custom tables; historisation rules
Use in this service	P1: model changes and loads of each item

Table 25 — Naming and Loading Standards.

4. Parametric ETL Framework

Item	Description
Purpose	Build the loads of all subject areas on one tested structure for delta loads, parameters and recovery «DAMALINK DOĞRULASIN»
Content	Parameter tables for sources, periods and load windows; delta loads; restart and recovery strategy after a failed load; load log and row counts for reconciliation
Use in this service	P1 and C2: loads, restart and recovery

Table 26 — Parametric ETL Framework.

5. KPI Catalogues

Item	Description
Purpose	Start the KPI definitions from a catalogue of the sector instead of collecting them report by report «DIGITALLENCY DOĞRULASIN»
Content	KPI catalogues for banking, investment banking and telecommunications: definition, formula, model entities used, granularity and owner of each KPI
Use in this service	P0 – P2: new KPI sets for banking, investment banking and telecommunications

Table 27 — KPI Catalogues.

6. Insurance Domain and Datamart Catalogue

Item	Description
Purpose	Start an insurance warehouse from a catalogue of domains, datamarts and KPIs built from earlier work «DAMALINK DOĞRULASIN»
Content	Source domains by line of business, about 30 warehouse domains, datamart designs, the insurance KPI set and the set of delivery documents per layer: business requirements, analysis, design, technical architecture, source-to-target matrix, data model document, technical and operational documents
Use in this service	P0 – P2: new domains, datamarts and KPIs for insurance

Table 28 — Insurance Domain and Datamart Catalogue.

ANNEX-3 — About Komtaş

> *FILL NOTE — the figures in Table 29 and in the bullets below come from the proposals of 2026. Check them against the current corporate profile before sending.*

Komtaş is an independent information technology company that has specialised in enterprise data management in Türkiye since 1989. More than 35 years of focus on a single field has given it an end-to-end view that follows data from the moment it is created to the moment a decision is taken.

Indicator	Value
Founded	1989 — more than 35 years of continuous data-focused activity
Specialist staff	250+ data engineers, architects, consultants and analysts
Offices	Istanbul, Ankara, Izmir, Dubai
Strategic partnerships	10+ global technology vendors
Focus area	Data governance, data architecture, analytics, artificial intelligence and AI agent based solutions
Positioning	"From Data to Agents" — integrated capability from data to AI agents

Table 29 — Komtaş corporate profile.

Service Capabilities

The service portfolio of Komtaş covers the whole life cycle of a data initiative:

- **Data Governance and Data Management:** data governance maturity assessment, framework and organisation design, policy and process design, data catalogue, business glossary, data quality management, master data management, data privacy and classification.
- **Data Architecture and Engineering:** data warehouse and data lake architectures, lakehouse design, data integration and streaming architectures, cloud and on-premises modernisation.
- **Analytics and Artificial Intelligence:** enterprise reporting, advanced analytics, machine learning models, generative AI applications and AI governance.
- **Managed Services and Support:** P1 / P2 / P3 support for production systems, capacity and performance management, continuous improvement services.
- **Training and Capability Building:** product training, role-based data governance training, train-the-trainer programmes.

Industry Data Model Experience

> *FILL NOTE — the references in Tables 30 and 31 are anonymous. Do not add institution names, system names, model names, partner names, contact persons or result figures without written approval; «YEAR» is filled once the year of the work is confirmed, «RESULT» is deleted if no measured result is approved, and the «REFERENCE PROJECT» row is deleted if there is no approved reference. Keep only the table of the chosen industry.*

Data warehouse work on industry data models is listed below. Reference calls can be arranged on request, subject to the approval of the institutions concerned.

Institution	Work	Measured Result	Year
«INDUSTRY — INVESTMENT BANKING» Three investment firms	Investment banking data warehouse on an industry data model «DIGITALLENCY DOĞRULASIN»	«RESULT»	«YEAR»
«INDUSTRY — TELCO» A telecom group	Enterprise data warehouse on an industry logical data model	«RESULT»	«YEAR»
«INDUSTRY — BANKING» Two participation banks and a Gulf bank	Banking enterprise data warehouse on an industry data model	«RESULT»	«YEAR»

Table 30 — Banking, investment banking and telecommunications references (anonymous).

Institution	Work	Measured Result	Year
«INDUSTRY — INSURANCE» An insurance group	Customer data across the systems of the group companies brought together into a single customer view «DAMALINK DOĞRULASIN»	«RESULT»	«YEAR»
«INDUSTRY — INSURANCE» «REFERENCE PROJECT»	Insurance data warehouse on an industry data model («FIELD»)	«RESULT»	«YEAR»

Table 31 — Insurance references (anonymous).

Why Komtaş

- **Focus:** Komtaş has worked only in the data field for more than 35 years, with more than 250 specialists and 4 offices.
- **Continuity:** the team that knows the model extends it and, where agreed, runs it (Section 10).
- **Platforms:** experience with Teradata and Informatica, and Google Cloud Premier partnership, so that the model can be built on-premises or in the cloud.
