KOMTAS

MASTER DATA MANAGEMENT / CUSTOMER 360

One trusted golden record per customer, product or code, built with agreed match and merge rules and shared with other systems

Start with an MDM assessment, build one domain on a consolidation or hub path, then add domains and run every month

1 **The challenge**
Symptoms, what MDM delivers, MDM and CDP. p. 2 – 4

2 **How it works**
Approach, match and merge, two paths, technology, modules, accelerators. p. 5 – 10

3 **Working together**
Three tiers, the assessment flow and timeline. p. 11 – 12

4 **Experience and next step**
References, customer inputs, about Komtaş, next step. p. 13 – 14

Symptoms: When Customer Data Does Not Add Up

KOMTAS

The same customer is held in several systems, often in several group companies, each with its own identifier and its own version of the data.

01 · SYMPTOMS

«DAMALINK DOĞRULASIN»

Duplicate customers

The same person or company recorded several times, within one system and across group companies.

No single view

CRM, core systems and the call centre each show a different customer; counts do not match.

Invalid or missing data

Identity numbers that fail the check digit, unusable phones and e-mail addresses, free-text addresses.

Data subject requests

Answering a KVKK request needs all records of one person, across all systems.

Group risk and legal reporting

Customer relationships and group exposure reported on data that is not reconciled.

Missed cross-sell

Products held in other companies or channels are not visible when an offer is made.

System renewal or merger

A new CRM or core system, or a merger, brings customer data together and exposes overlaps.

Programmes need one ID

Digital, omnichannel and CDP projects need a stable customer identifier to start from.

WHAT THE PACKAGE CHANGES

One golden record
per customer, with a golden ID

Agreed rules
match and merge rules signed off

Clean attributes
validated and standardised

Known relationships
household, group, holdings

Shared data
distributed to consuming systems

What MDM and Customer 360 Deliver

KOMTAS

Master data is the shared, non-transactional data that many processes depend on. MDM keeps one trusted version of it and makes it available to the systems that use it.

02 · WHAT IT DELIVERS

WHAT MASTER DATA IS

«DAMALINK DOĞRULASIN»

Party
Customer, agency, employee, supplier

Product
Product, part, service

Account
Contract, agreement

Location
Region, address, branch

Non-transactional | Unique | Current | Consistent

TECHNICAL CAPABILITIES

«DAMALINK DOĞRULASIN»

- Integration with core systems
- Extensible related data model
- Data quality management
- Match and merge
- Single customer view
- Hierarchy and relationships
- Batch and real-time services
- Security on records and fields
- Steward user interface
- History of master data changes

BUSINESS USES

«DAMALINK DOĞRULASIN»

- **Right offer, channel and time** based on the full customer
- **Cross-sell and up-sell** holdings across companies
- **Better segmentation** on clean, deduplicated data
- **Customer and group risk** through relationships
- **Legal reporting** on reconciled customer data
- **KVKK requests** all records of one person
- **Region, branch, employee** relationship views
- **Portfolio reports backwards** using master data history

Business owns the rules. What counts as the same customer, and which value wins, is decided by business data owners. MDM applies these decisions consistently in every system.

MDM and CDP: Different Jobs, One Customer

KOMTAS

Master data management and a customer data platform are often discussed together. They solve different problems and work best when the boundary is clear.

03 · MDM AND CDP

	MDM / Customer 360	Customer data platform (CDP)
Purpose	Operational golden record: who the customer is	Marketing and activation: what the customer does
Data held	Identity, contact, demographic, relationship attributes	Behavioural and event data, clickstream, campaign responses
Core method	Identity resolution with deterministic and fuzzy rules on identifiers; survivorship	Profile stitching on events and devices; segments and audiences
Output	Golden ID, cleaned attributes, hierarchy and relationships	Segments, audiences, journeys, channel activation
Written back to	Operational systems: CRM, core, call centre, DWH	Marketing channels and campaign tools
Typical owner	Data governance and IT	Marketing
Consent	Consent attributes may be mastered	Consent orchestration across channels

HOW THEY WORK TOGETHER

CDP uses the golden ID
The CDP consumes the MDM golden ID and cleaned attributes instead of resolving identity again.

MDM stays operational
MDM does not hold clickstream data or run campaigns; it serves all systems, not only marketing.

Rules are reused
Data quality, match and merge rule documents from MDM are inputs to a later CDP project.

Approach

KOMTAS

Five steps from access to operation. Rules are written down and agreed before they are built, so every decision on matching and merging can be traced.

04 · APPROACH

«DAMALINK DOĞRULASIN»

Access

connect the sources

- Relational databases
- Mainframe
- Big data
- Files

Analyze

profile and measure

- Column profiling
- Data quality dimensions
- Match rule drafts
- Match scores, reports

Design

model and architecture

- Conceptual data model
- Deployment model
- Inbound and outbound
- Batch or real time

Apply

build and validate

- Cleansing, standardisation
- Match and merge
- Hierarchy, relationships
- Distribution

Manage

run and steward

- Scheduling, monitoring
- User authorisation
- Logs and history
- New sources added

CROSS-CUTTING

Quality dimensions

Accuracy, completeness, consistency, validity, uniqueness, timeliness.

Turkish dictionaries

City, district, country, occupation, education, noise words.

Rule documents

Data quality, match and merge rules signed off by the business.

Stewards involved

Data stewards review clusters and approve changes.

Traceability

Source-to-target matrix from landing to the golden record.

Iterations, not guesses. Match and merge rules are tuned in agreed iterations on real data. Each iteration produces match scores and cluster reports that the business reviews.

Match, Merge and the Golden Record

KOMTAS

Records are cleansed and standardised, compared with match rules, grouped into clusters and merged into one golden record using survivorship rules per field.

05 · MATCH AND MERGE

MATCH RULE PATTERNS · EXAMPLES

«DAMALINK DOĞRULASIN»

Name + national ID number
fuzzy name score above an agreed threshold, e.g. 70

Company title + tax number
for corporate customers, e.g. 70

Name + mobile phone
high name similarity, e.g. 90

Name + e-mail
e.g. 90; common free-mail domains treated as risky

First name + ID or mobile + birth date
allows surname change, e.g. after marriage

Negative rule
different filled national IDs or birth dates block a match

SURVIVORSHIP PER FIELD

«DAMALINK DOĞRULASIN»

1. **Most frequent non-blank** value across the cluster
2. **Most recent update** when frequency does not decide
3. **Source trust** agreed ranking of sources per field

ILLUSTRATIVE EXAMPLE *Invented data; names, numbers and scores are examples.*

Source	Name	National ID	Mobile	E-mail
CRM	Deniz ÖRNEK	1•••••••••8	0555 000 0001	—
Core	DENIZ ORNEK	1•••••••••8	—	deniz.ornek@example.com
Web	Deniz Örnek	—	+90 555 000 0001	Deniz.Ornek@Example.com

MATCHES FOUND · ONE CLUSTER OF THREE RECORDS

CRM ↔ Core
name + national ID · score 96

CRM ↔ Web
name + mobile · score 94

Core ↔ Web
name + e-mail · score 95

GOLDEN RECORD

Golden ID	**GR-000001**	assigned once, kept stable
Name	**Deniz Örnek**	most frequent after standardisation
National ID	**1•••••••••8**	same in two sources, check digit passed
Mobile	**+90 555 000 0001**	standardised format
E-mail	**deniz.ornek@example.com**	most recent update, lower case
Cross-reference	**CRM · Core · Web**	source IDs kept for each record

False merges cost more than missed matches. Thresholds are set with the business and checked on samples of clusters. Records with lower scores go to data stewards for review instead of merging automatically.

Two Implementation Paths

KOMTAS

The first domain is built on one of two paths. The assessment recommends the path; both use the same rule documents and the same foundation work.

06 · IMPLEMENTATION PATHS

CONSOLIDATION — Batch golden record

data quality tools, no hub

- Batch cleansing and standardisation
- Match and merge in data quality jobs
- Golden record table with cross-reference
- Distribution to DWH and CRM
- Lower licence cost

Fits when the main need is analytical and reporting use, sources change in batch, and no steward workflow is needed in a user interface.

About 3 / 5 / 6+ months by size «DAMALINK DOĞRULASIN»

HUB — Operational master data hub

MDM hub with steward user interface

- Hub data model: landing, staging, base objects
- Data quality on load, match and merge
- Trust and survivorship per field
- Steward UI, approval workflow, hierarchy
- Batch and real-time services

Fits when operational systems need the golden record in real time, relationships and hierarchies must be managed, and stewards work on records daily.

About 5+ months by size «DAMALINK DOĞRULASIN»

COMMON TO BOTH PATHS

«DAMALINK DOĞRULASIN»

- Source-to-target matrix
- Data quality rule catalogue
- Match and merge rules
- Reference dictionaries
- Steward process set-up
- Parallel validation
- Handover

Optional lines. IDMC licence and onboarding «OPTIONAL»; migration of historical data «OPTIONAL». Moving from consolidation to a hub later reuses the rule documents.

Technology Options

KOMTAS

The package is delivered with Informatica master data products, on-premises or on Informatica Intelligent Data Management Cloud (IDMC). The choice is a scope item.

07 · TECHNOLOGY

TWO OPTIONS

«DAMALINK DOĞRULASIN»

Need	On-premises	IDMC
Master data hub	Informatica MDM Multidomain, with steward UI and services	MDM SaaS (Customer 360, Business 360)
Product information	Informatica Product 360 (PIM)	Product 360 SaaS
Reference data	Informatica RDM, or an in-house solution	Reference 360
Data quality and matching	Informatica Data Quality (IDQ)	Cloud Data Quality
Integration	PowerCenter	Cloud Data Integration

WHAT DECIDES THE OPTION

Existing licences
Informatica products and versions in use; support status of on-premises versions «FIELD».

Cloud plans
Whether data platforms are moving to cloud.

Path and latency
Consolidation or hub; batch or real-time distribution.

Platform is a scope item. The option is agreed during the assessment «PLATFORM». Licence procurement is not part of the package, except the optional IDMC line.

Domain Modules

KOMTAS

A domain module adds one master data domain on the foundation. Customer 360 is the usual first domain; further domains reuse the same foundation and rules.

08 · MODULES

«DAMALINK DOĞRULASIN»

Customer 360

individual and corporate customers

- Within and across group companies
- Household and group relationships
- Customer–product holdings
- Customer–institution relations
- Steward queues and approval

Vehicle variant: vehicle as related entity

Product 360 / PIM

product information management

- Two-tier model: product and variant
- Daily batch delta from sources
- Enrichment of product content
- Publication to channels
- No transactional data, e.g. stock

About 4 / 5 / 6 months by size

Reference Data

code lists across systems

- Central code lists
- Crosswalk mapping between systems
- Approval workflow
- History of code changes
- Distribution to consumers

Product or in-house, by decision table

REFERENCE DATA · PRODUCT OR IN-HOUSE

«DAMALINK DOĞRULASIN»

Criterion	Product (RDM / Reference 360)	In-house
Hierarchy and crosswalk	Built in, with steward UI	Built and maintained by the team
Approval and history	Workflow and timeline included	Developed per requirement
Fits when	Many code lists, many systems, audit needs	Few lists, simple mapping, no approval

Vehicle is a variant, not a module. For automotive, insurance or fleet: chassis number, plate, owner and insured relations.

Accelerators

KOMTAS

Eight accelerators prepared for master data work on Turkish customer data. They shorten analysis and keep rules consistent across domains.

09 · ACCELERATORS

«DAMALINK DOĞRULASIN»

1 Turkish customer data quality rules

- Name, surname, title
- National ID and tax number checks
- Phone, e-mail, address, occupation

2 Match rule set

- Deterministic and fuzzy rules
- Negative rules, free-mail handling
- Example thresholds to tune

3 Survivorship template

- Most frequent non-blank
- Most recent update
- Source trust per field

4 Source-to-target matrix

- Landing, staging, base object
- Rules per column
- Data model document template

5 Reference dictionaries

- City, district, country
- Occupation, education
- Noise words and prefixes

6 Analysis report set

- Customer counts, active/passive
- Match frequency
- Unique customers, clusters

7 Reference data decision table

- Product or in-house
- Criteria and weights
- When each fits

8 Requirement question set

- Architecture and sources
- Volumes and domains
- Integration and stewardship

Rules as documents. Data quality, match and merge rules are kept as signed-off documents. They are the basis for building, testing and changing the solution.

Three Service Tiers: Assessment, Domain Foundation, Multi-domain and Run

KOMTAS

The assessment measures duplicates and drafts the rules. The domain foundation builds one domain on the chosen path. Further domains and the monthly run follow.

10 · SERVICE TIERS

A — MDM Assessment

fixed fee «...» · 4 – 8 weeks

- Business problems, domains, sources
- Profiling and data quality analysis
- Duplicate analysis, match rule draft
- Merge rules, golden record definition
- Architecture, path, roadmap

OUTPUT

Rule documents · duplicate rate findings · conceptual model · architecture · B roadmap and estimate

«DAMALINK DOĞRULASIN»

B — Domain Foundation

one domain · fee «...»

- Foundation once: tools and standards
- Path: consolidation or hub
- Customer 360 or another module
- Steward process with the business
- Parallel validation, handover

OUTPUT

Golden records for agreed sources · steward workflow running · distribution to agreed consumers

«DAMALINK DOĞRULASIN»

C — Multi-domain and Run

C1 per domain · C2 monthly fee «...»

- C1: additional domain on the foundation
- C1: cross-domain relationships
- C2: match and merge tuning
- C2: steward support, monitoring
- C2: minimum term 12 months

OUTPUT

New domains live · monthly report on duplicates and steward backlog · unused hours are not carried over

«DAMALINK DOĞRULASIN»

Assessment first. The domain foundation starts from the assessment, or from an equivalent analysis already done by the customer «A REF».

Assessment: Work Flow and Timeline

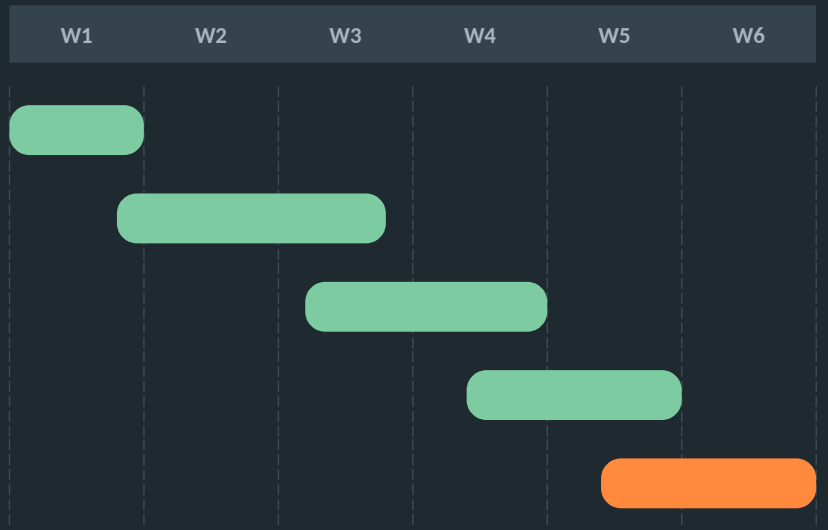

KOMTAS

Five phases over four to eight weeks. The assessment ends with measured duplicate rates, signed-off rule drafts, a target architecture and an estimate for the domain foundation.

11 · ASSESSMENT

INDICATIVE PLAN · BAND M · 6 WEEKS

«DAMALINK DOĞRULASIN»

SIZE DRIVERS

«DAMALINK DOĞRULASIN»

- Domains
- Source systems
- Records
- Match rules
- Consumers

Each driver falls into band S, M or L. The size is the highest band reached by at least three drivers. Above 50 million records, the work is planned as a programme.

DELIVERABLES

«DAMALINK DOĞRULASIN»

- Requirement document
- Data quality analysis report
- Match rule document
- Merge rule document
- Duplicate rate findings
- Conceptual data model
- High-level architecture
- Path, roadmap and estimate

Duration by size. Small about 4, medium about 6, large about 8 weeks. Scope assumption: up to 5 source tables or files and up to 3 million active customers. «DAMALINK DOĞRULASIN»

Experience, and What the Customer Provides

KOMTAS

Reference work shown by sector, and the time and decisions the work needs from the customer side.

REFERENCE WORK

«DIGITALLENCY DOĞRULASIN»

Sector	Work	Scope and result	Year
An insurance group	**Single customer view**	Four group systems brought into one environment; duplicate customers cleaned within and across group companies; access to reports reduced from one week to one day.	«YEAR»
An e-commerce company	**Product information (PIM)**	Product information management «RESULT».	«YEAR»

WHAT THE CUSTOMER PROVIDES

«DAMALINK DOĞRULASIN»

Business data owners

decide the rules

- Definition of the same customer
- Sign-off of match and merge rules
- Review of cluster samples
- Acceptance of golden records

Data stewards

work on records

- Review of suspect matches
- Approval of changes
- Reference data upkeep
- Capacity agreed per week

IT integration and DBAs

sources and consumers

- Access to sources
- Table and column knowledge
- Interfaces to consumers
- Environments and windows

Data governance office

ownership and policy

- Owners per domain
- Steward organisation
- Policies and standards
- Change decisions

CONDITIONS TO START

«DAMALINK DOĞRULASIN»

Access to customer data
Read access to production data, or a full copy, for profiling and matching.

A business owner for the rules
A named owner who signs off match and merge rules.

Steward capacity
People who will review clusters and approve changes.

A licence decision
On-premises or IDMC, and the licences to be used.

References are shown by sector, without customer names.

About Komtaş, and the Next Step

Who delivers Master Data Management / Customer 360, and what is needed to start.

KOMTAS

12 · ABOUT KOMTAŞ AND NEXT STEP

WHY KOMTAŞ

Informatica partner
Data integration, data quality and master data work on Informatica products.

Google Cloud and Microsoft Azure partner
Komtaş is a Google Cloud Premier partner and a Microsoft Azure partner.

Data integration and data warehouse work
Data integration, data warehouse and BI projects in several sectors.

Master data experience
Reference work by sector on p. 13. «DIGITALLENCY DOĞRULASIN»

From assessment to monthly run
Assessment, domain build, further domains and Run from one partner.

Since 1989, focused on data · 250+ specialists · offices in Istanbul, Ankara, Izmir and Dubai

NEXT STEPS

1. **Walkthrough** — today — you are here
2. **Discovery call** — domains, sources, volumes, platform
3. **Assessment proposal** — fixed fee, scope and plan
4. **Kick-off** — access, profiling set-up

Useful for the discovery call. A list of systems that hold customer data, with record counts; how active customers are identified; any existing match or deduplication rules; consuming systems; Informatica licences in use; the trigger.
