Master Data Management / Customer 360 · Service A

MDM Assessment

Technical and Commercial Proposal

Profiling and data quality analysis, duplicate analysis, draft match and merge rules, golden record definition, target architecture, implementation path and roadmap for the master data of «CUSTOMER»

Proposal No: KOMTAS-«CUSTOMER ABBREVIATION»-MDM-A-«YEAR»-«SEQUENCE»

Proposal Date: «dd Month yyyy»

Validity: «proposal date + 1 month»

VARIABLE GLOSSARY — in this template only the fields inside « » change per customer. All other text is fixed.

Identity: «CUSTOMER» short customer name used in the text · «CUSTOMER NAME» full legal name (cover) · «GROUP COMPANIES» group companies in scope; delete the line for a single company · «CUSTOMER ABBREVIATION» short code in the proposal number · «YEAR» year (proposal number; year of a reference project) · «SEQUENCE» proposal sequence number · «dd Month yyyy» proposal date · «proposal date + 1 month» end of validity · «price validity date» latest start date for which the fees stay valid

Context: «CUSTOMER CONTEXT» one paragraph: sector, group companies, main operational systems holding customer, product or reference data (core, CRM, ERP, channels), data warehouse, current practice for duplicate records, reason for the request · «TRIGGER» reason for the work (e.g. duplicate customers across systems or group companies, KVKK data subject requests, group risk or legal reporting, a CRM or core system renewal, a merger, an omnichannel programme, a CDP project that needs a golden customer ID, an unmanaged product catalogue)

Scope: «PLATFORM» technology option chosen for the work: on-premises Informatica products or Informatica IDMC (cloud); see the technology options table · «BAND» sizing band S, M or L from the proposal input form

Commercial: «OPTIONAL» item kept or deleted by sales; if kept, delete the marker · «fee» fee excl. VAT · «amount» payment amount excl. VAT · «day rate» person-day rate (change requests) · «CITY» city where on-site meetings are free of charge

Values: «NUMBER» numeric value (count, sample size, days, weeks, months, hours) · «%» percentage (payment rate, precision of the cluster review) · «FIELD» free text (e.g. names of source or consuming systems, a product version, a term agreed separately)

Annex: «REFERENCE PROJECT» further reference project approved for this proposal (no names without permission); otherwise delete the row · «RESULT» measured result of a reference project, only if measured and approved for use; otherwise delete the line

Contacts: «full name» contact name · «title» contact title · «e-mail / phone» contact details

Markers: «OPTIONAL» items are kept or deleted by sales. The orange DAMALINK DOĞRULASIN and DIGITALLENCY DOĞRULASIN tags mark draft statements to be verified before use. FILL NOTE boxes are internal and are deleted before sending.

Contents

FILL NOTE — this template is for service A (MDM Assessment) of the Master Data Management / Customer 360 package. The master data sources of «CUSTOMER» are profiled and analysed on extracts or read-only copies; no golden record is built and no source system is changed. Service B is proposed on the basis of the results.

Technology option: the work is carried out either with on-premises Informatica products or with Informatica IDMC (cloud); the choice is a scope item («PLATFORM», Table 5). Licences are not part of this proposal unless an optional licence line is kept. Product names and versions are confirmed with the licence position of «CUSTOMER» before sending.

Statements followed by an orange tag are draft assumptions of the package and are verified before the template is used. DAMALINK DOĞRULASIN: approach, phases, deliverables, durations, effort, bands and record packs, roles, tools and their IDMC equivalents, data quality, match and merge rule patterns and thresholds, the reference data decision table, accelerators, acceptance criteria. DIGITALLENCY DOĞRULASIN: the insurance group and e-commerce references. After verification only the tag is deleted. No proposal is sent with a tag in it.

Order of completion: sizing values and band from the proposal input form (Table 4) → «PLATFORM» (Table 5) → scope assumption (Section 7.1) → timeline (Section 4.2) → effort and fees (Section 9) → Annex 2 → remaining « » fields. No commercial figures other than the fees in Section 9 are written into this proposal.

1. Purpose

1.1 Background and Aim

«CUSTOMER CONTEXT»

The aim of this proposal is to establish the state of the master data of «CUSTOMER»: how complete and consistent it is, how many duplicate records it holds within and across systems, which rules can identify and merge them, and how a golden record can be built and distributed. The reason for the work is «TRIGGER».

Typical symptoms are incomplete, inconsistent and duplicate customer data, no reliable single view of a customer or supplier, relationships between customers that are not used, weak cross-selling and up-selling, and no common data foundation for digital work. «DAMALINK DOĞRULASIN»

1.2 External Triggers

The work is usually started by one or more of the triggers below.

Trigger	What It Requires from the Master Data
Duplicate customers across systems or group companies	Each customer identified once across systems and companies, with a cross-reference to each source record «DAMALINK DOĞRULASIN»
KVKK data subject requests	All records of one person found and answered from a single view
Group risk and legal reporting	Customers grouped by their relationships (household, company group) on clean data
CRM or core system renewal, mergers	Clean, deduplicated master data loaded into the new system; sources of merged companies brought together
Omnichannel and digital programmes	The same customer and product data in every channel
CDP projects	A golden customer ID and core attributes for the CDP to consume
Product catalogue in retail and e-commerce	One product–variant structure, enriched and published to the channels

Table 1 — External triggers.

1.3 Service Structure

The package is offered as three services. This proposal covers service A.

Service	Focus	Result	Pricing
A — MDM Assessment	Profiling and data quality analysis of the master data sources, duplicate analysis, draft match and merge rules, golden record definition, conceptual data model, target architecture, choice of the implementation path and roadmap; 4 to 8 weeks «DAMALINK DOĞRULASIN»	Rule documents, duplicate rate, architecture, roadmap and estimate for B	Fixed fee
B — Domain Foundation	Foundation once and one domain module, on the Consolidation path (batch cleansing, match and merge, golden record table) or on the Hub path (MDM hub with steward workflow and services)	Golden records of one domain, distributed to the agreed systems	Foundation once + domain module fee
C — Multi-domain & Run	C1 Additional domain (one-time per domain) on the same foundation, with cross-domain relationships. C2 Run (monthly): match and merge tuning, steward support, data quality and match quality monitoring, new sources, monthly report	Further domains mastered; quality of the golden records kept under control	C1 fixed fee per domain; C2 monthly fee

Table 2 — Service structure. This proposal covers service A.

At the end of the work, «CUSTOMER» has a data quality analysis of its master data sources, the duplicate rate within and across systems, draft match and merge rules, a golden record definition, a conceptual data model, a high-level target architecture, the choice of the implementation path and a roadmap with an estimate for service B.

2. Scope

2.1 Scope Topics

The assessment covers the topics below. «DAMALINK DOĞRULASIN»

#	Topic	Content
1	Requirements and sources	Business problems, domains and their priority, source systems and tables, access, set-up of the profiling and matching tool for the assessment
2	Profiling and data quality analysis	Fill rate, uniqueness, frequency and patterns per column; data quality dimensions and their weights; data quality problems counted with examples
3	Duplicate analysis and match rules	Draft match rules, match scores, cluster and match frequency reports, active, passive and unique customer counts
4	Merge, survivorship and golden record	Draft merge and survivorship rules per field, golden record definition
5	Conceptual data model	Domains, entities, relationships and hierarchies in scope
6	Target architecture, path and roadmap	Deployment model, inbound and outbound flows, batch or real time, tool choice, implementation path for B, roadmap and estimate

Table 3 — Scope topics.

2.2 Scope Size

Sizing Input	Value	Source
Domains in scope	«NUMBER»	Statement of «CUSTOMER»
Source systems	«NUMBER»	Statement of «CUSTOMER»
Records (millions; active / passive)	«NUMBER»	Statement of «CUSTOMER»
Expected match rules	«NUMBER»	Estimate in the proposal input form
Consuming systems / integrations	«NUMBER»	Statement of «CUSTOMER»

Table 4 — Values on which sizing is based. Band: «BAND». The values are statements and are checked in P0.

FILL NOTE — take the values and the band from the proposal input form (mdm-customer-360-3a-assessment-girdi-formu). Draft band drivers:

Domains: S 1 · M 2 · L ≥3. Source systems: S ≤3 · M 4–8 · L >8. Records: S ≤10 M · M ≤30 M · L ≤50 M. Match rules: S ≤20 · M 21–60 · L >60. Consuming systems: S ≤3 · M 4–8 · L >8. Band rule: the highest band reached by at least three drivers; more than 50 M records is treated as a programme and sized separately. «DAMALINK DOĞRULASIN»

2.3 Master Data in Scope

Master data is the non-transactional data that describes the main business objects: party (customer, agency, employee, supplier), product (product, part, service), account (contract, agreement) and location (region, address). It has to be unique, current and consistent across systems. Customer 360 is the lead domain of this package; the domains in scope of the assessment are «FIELD». «DAMALINK DOĞRULASIN»

2.4 Technology Options

The assessment and the later implementation can be carried out with on-premises Informatica products or with Informatica IDMC. The option is chosen with «CUSTOMER» in P0 and confirmed in the target architecture (P4).

Need	On-premises (Informatica)	IDMC (cloud)
MDM hub	Informatica MDM Multidomain, with the steward user interface (IDD) and the SIF services	MDM SaaS (Customer 360 / Business 360) «DAMALINK DOĞRULASIN»
Product information	Informatica Product 360 (PIM)	Product 360 SaaS
Reference data	Informatica Reference Data Management (RDM) or an in-house solution	Reference 360
Data quality and matching	Informatica Data Quality (IDQ)	Cloud Data Quality
Integration	PowerCenter	Cloud Data Integration
Support status of the on-premises version in use	«FIELD»	—

Table 5 — Technology options. Option chosen: «PLATFORM».

2.5 Boundaries to Other Services

- **Data Governance:** the data steward organisation, data ownership and policies belong to the Data Governance service. This package configures the steward workflow in the MDM tool and sets up the steward process together with the data governance office of «CUSTOMER».
- **Data Quality:** the enterprise data quality programme belongs to the Data Governance service. This package applies data quality rules to the master data in scope.
- **Data Privacy:** masking of personal data in non-production copies of the MDM environment is the subject of the Data Privacy & Test Data (KVKK) service.
- **Source systems:** changes in the source systems are made by «CUSTOMER» or its suppliers; this package defines the interfaces they need.

MDM and CDP

Master data management provides the operational golden record. Identities are resolved with deterministic and fuzzy rules on identifiers, the surviving value is chosen per field, hierarchies are kept and the result is written back to the operational systems; the owners are data governance and IT. A customer data platform (CDP) serves marketing and activation: behavioural and event data, segments, audiences, journeys and channel activation; the owner is marketing. The two work together: the CDP consumes the golden customer ID and attributes from MDM. MDM does not hold clickstream data and does not orchestrate consent; consent attributes can be mastered in it. CDP work is outside the scope of this proposal.

3. Approach

3.1 Approach Steps

The assessment follows four steps: Access → Analyze → Design & Architect → Apply. «DAMALINK DOĞRULASIN»

- **Access:** connections to the master data sources in scope (relational databases, mainframe, big data, files) or extracts of them.
- **Analyze:** column profiling, data quality metrics, draft match and merge rules, match scores and the analysis reports.
- **Design & Architect:** deployment model, conceptual data model and high-level architecture with the inbound and outbound flows, the integration method and the data flow.
- **Apply:** the results are evaluated with «CUSTOMER» and the decision on the implementation path and the roadmap is taken.

3.2 Profiling and Data Quality Analysis

Each column of the master data tables is profiled for fill rate, unique values, frequency and patterns. The data quality rules of the Turkish customer data quality rule catalogue (accelerator 1, Annex 1) are applied, with the reference dictionaries of accelerator 5. Each problem is counted and shown with examples, by dimension (completeness, validity, accuracy, consistency, uniqueness, timeliness). The dimensions are weighted with «CUSTOMER» to give a data quality score per source and per field. «DAMALINK DOĞRULASIN»

3.3 Duplicate Analysis and Match Rules

Match rules are drafted from the match rule set for Turkish customer data (accelerator 2, Annex 1): combinations of a name score with an identifier such as TCKN, VKN, mobile phone or e-mail, rules for changed surnames and negative rules that block a match. The rules are run on the data, the match scores are reviewed with the business data owners and the rules are adjusted. The results are given in the analysis report set (accelerator 6): customer counts, active and passive customers, match frequency, unique customers and clusters. The duplicate rate is reported within each system and across systems or group companies. «DAMALINK DOĞRULASIN»

3.4 Merge, Survivorship and Golden Record

For each field of the golden record, the merge rule document states which value survives: for example the most frequent non-blank value, then the most recent update, or the value of the most trusted source or channel (accelerator 3, Annex 1). The golden record definition is illustrated with records of «CUSTOMER» from at least two sources. The draft assumes basic cleansing before matching and a limited number of tuning rounds in service B. «DAMALINK DOĞRULASIN»

3.5 Conceptual Data Model

The conceptual data model gives the domains in scope, their main entities and attributes, the relationships between them (for example customer–customer, customer–product, customer–institution) and the hierarchies needed (for example household or company group). It is the starting point of the hub or golden record data model in service B.

3.6 Target Architecture, Implementation Path and Roadmap

The high-level target architecture gives the deployment model, the products of the chosen option («PLATFORM»), the inbound flows from the sources, the outbound flows to the consuming systems, batch or real-time integration and the data flow. The roadmap chooses the implementation path of service B, Consolidation or Hub, and gives the foundation and domain effort, duration and team. «DAMALINK DOĞRULASIN»

The two paths are compared below:

Item	Consolidation	Hub
What is built	Batch cleansing and standardisation, match and merge, a golden record table with a cross-reference to each source record «DAMALINK DOĞRULASIN»	MDM hub: data model, landing, staging and base objects, data quality in the load, match and merge, trust and survivorship, steward user interface with approval workflow, hierarchies and relationships, batch and real-time services
Distribution	Batch to the data warehouse, CRM and the other agreed consumers	Batch and real time to operational and analytical systems
Steward work	Review of match results through reports and work lists	Tasks and approvals in the steward user interface
Licence	Data quality product; lower licence cost	MDM product
Typical duration	About 3, 5 or 6+ months by band	About 5 months or more
When it fits	Single customer view for analytics and reporting, batch consumers, a first step towards a hub	Operational golden record, real-time consumers, hierarchies, steward workflow

Table 6 — Implementation paths of service B.

4. Activities and Timeline

4.1 Phases

The work is carried out in five phases. Each phase has a written exit criterion. «DAMALINK DOĞRULASIN»

Phase	Activities	Exit Criterion
P0 Initiate	Business problems, domains, sources and tables, access, set-up of the profiling and matching tool	Requirement document approved; access and tool ready
P1 Profile and data quality	Column profiling, data quality rules, dimensions and weights, data quality analysis report	Data quality findings presented
P2 Duplicate analysis	Draft match rules, match scores, cluster and match frequency reports, customer counts	Match rule document reviewed with the business data owners
P3 Merge and data model	Merge and survivorship rules, golden record definition, conceptual data model	Merge rule document and data model reviewed
P4 Architecture and roadmap	High-level architecture, tool choice, implementation path, roadmap, estimate, results presentation	Results presented; deliverables handed over

Table 7 — Phases and exit criteria.

4.2 Timeline

FILL NOTE — the duration follows the band in Section 9. Draft distribution of the weeks for band M (6 weeks): P0 1 · P1 1.5 · P2 1.5 · P3 1 · P4 1 weeks. «DAMALINK DOĞRULASIN»

Phase	Work Step	Weeks
P0	Initiate	«NUMBER»
P1	Profile and data quality	«NUMBER»
P2	Duplicate analysis	«NUMBER»
P3	Merge and data model	«NUMBER»
P4	Architecture and roadmap	«NUMBER»
	Total	«NUMBER»

Table 8 — Distribution of the weeks. Band: «BAND».

The timeline applies provided the assumptions in Section 7 hold. Delays in access to the source data or in the availability of the business data owners move the timeline by the same amount.

5. Deliverables and Acceptance

5.1 Deliverables

Documents are delivered in Turkish, in editable format (Microsoft Word / Excel / PowerPoint) together with a PDF copy. The analysed data stays in the environment of «CUSTOMER».

#	Deliverable	Phase	Content
D1	Requirement document	P0	Business problems, domains, sources, access, scope assumption «DAMALINK DOĞRULASIN»
D2	Data quality analysis report	P1	Profile per column, data quality problems with counts and examples, scores
D3	Duplicate rate findings	P2	Customer counts, active and passive, match frequency, unique customers, clusters; duplicate rate within and across systems
D4	Match rule document	P2	Draft match rules with fields, scores and negative rules
D5	Merge rule document	P3	Survivorship per field, golden record definition and example
D6	Conceptual data model	P3	Domains, entities, relationships, hierarchies
D7	High-level architecture	P4	Deployment model, products, inbound and outbound flows, batch and real time
D8	Roadmap and estimate for service B	P4	Implementation path, domain order, foundation and domain effort, duration, team and assumptions
D9	Results presentation	P4	Summary of D1 – D8 for management

Table 9 — Deliverables.

5.2 Acceptance

Deliverable	Acceptance Criterion
Data quality analysis and duplicate findings	Every source named by «CUSTOMER» in P0 analysed, or recorded with the reason why it was not analysed «DAMALINK DOĞRULASIN»
Match and merge rule documents	Rules accepted by the business data owners and data governance of «CUSTOMER», or open points listed
Architecture, roadmap and estimate	Path, domains, effort and duration of service B given with the assumptions they rest on

Table 10 — Acceptance criteria.

Each deliverable is reviewed by «CUSTOMER» within «NUMBER» working days of delivery. If no written objection is received in that period, the deliverable is deemed accepted.

6. Customer Responsibilities

«CUSTOMER» is responsible for the items below. A delay in any of them moves the timeline by the same amount.

- Appoint a project coordinator who is available throughout the work.
- Provide read-only access to the master data tables in scope, or extracts of them, within «NUMBER» working days from the start of P0. Analysis on data that is not production data does not show the real duplicate rate.
- Provide the environment and the licence for the profiling and matching tool of the chosen option («PLATFORM») during the assessment.
- Name business data owners who decide on the match and merge rules, and make the data governance office available.
- Make the source system owners, the integration team and the database administrators available.

The participation expected from «CUSTOMER» is: «DAMALINK DOĞRULASIN»

Role	Expected Contribution	Participation
Project sponsor	Approval of scope, results presentation	P0, P4
Business data owners	Business problems, decisions on match and merge rules	P0, P2 – P3
Data stewards	Review of match scores, clusters and golden record examples	P1 – P3
Data governance office	Data quality dimensions and weights, ownership, steward process	P1, P3 – P4
IT integration	Source and consuming systems, interfaces, batch and real-time needs	P0, P4
Database administrators	Access, extracts, metadata	P0 – P1

Table 11 — Expected participation of «CUSTOMER». Total expected effort is «NUMBER» person-days.

7. Assumptions and Out of Scope

7.1 Assumptions

The duration, effort and fee in this proposal are based on the assumptions below. If they do not hold, the impact is assessed through a change request.

- The work starts within «NUMBER» working days of contract signature.
- The analysis covers up to «NUMBER» source tables or files (for example 5) and up to «NUMBER» million active individual and corporate customers (for example 3 million). A larger scope is reassessed at the end of P0. «DAMALINK DOĞRULASIN»
- The values in Table 4 have been stated by «CUSTOMER». If the sources found in P0 indicate a different band, duration and effort are reassessed at the end of P0.
- Access to the data is read-only. No source record is changed, merged or copied out of the environment of «CUSTOMER».
- The match and merge rules are drafts; they are completed and tuned in service B.
- The work is carried out mainly remotely through the access provided by «CUSTOMER»; the kick-off, the rule reviews and the results presentation are held on site in «CITY».
- The working language and the language of the deliverables is Turkish.

7.2 Out of Scope

The topics below are outside the scope of this proposal. If requested, they are assessed and proposed separately. «DAMALINK DOĞRULASIN»

- Building the golden record, the hub or the consolidation; these are the subject of service B.
- CDP, campaign management and channel activation.
- Changes in the source systems.
- Enterprise data quality work outside the master data in scope.
- Procurement of licences.
- Design of the data steward organisation and data ownership (Data Governance service).

8. Team

8.1 Komtaş Team

Role	Responsibility	Participation
Engagement Lead	Plan, rule reviews with the business, roadmap, results	P0 – P4 «DAMALINK DOĞRULASIN»
MDM Architect	Match and merge rules, data model, target architecture, path choice	P0 – P4
MDM / IDQ Developer	Tool set-up, profiling and match runs	P0 – P2
Data Quality Analyst	Data quality rules, analysis report, duplicate findings	P1 – P3
Business Analyst	Requirements, business meaning of the data, reviews with the data owners	P0, P2 – P3, part time

Table 12 — Komtaş team and roles.

- If a change in the team is needed, the replacement has at least equivalent qualifications and is notified to «CUSTOMER» in advance.

8.2 Governance

- Weekly progress meeting on access, open items and timeline.
- Review and written approval at the end of each phase.
- Any issue that affects the timeline or the scope is reported in writing in the week it is found.

8.3 Risks

Risk	Impact	Mitigation
No access to production customer data	Duplicate rate and data quality underestimated	Access or extracts agreed in P0; sources without access recorded as open
Business disagreement on the match rules	False merges or missed duplicates later	Business data owners named in P0; match scores reviewed on examples
Low quality of the source data	Lower match rates; more steward work	Cleansing need quantified in D2 and sized in the roadmap
Support status of on-premises product versions	Architecture choice	Version and support status checked in P0; IDMC option assessed

Table 13 — Risks.

Any request that affects the scope, the timeline or the fee is handled through a written change request. It is not carried out before its impact and fee are approved.

9. Effort and Fees

> *FILL NOTE — take the band, the duration and the effort from the proposal input form (mdm-customer-360-3a-assessment-girdi-formu). Fees are entered by sales. Draft values:*
>
> *Duration and Komtaş effort: S 4 weeks / ~25 pd · M 6 weeks / ~40 pd · L 8 weeks / ~60 pd.* «DAMALINK DOĞRULASIN»
>
> *The values are not based on recorded effort. Delete this box before sending.*

Service A is offered at a fixed fee. The fee is based on the sizing values in Table 4 and the assumptions in Section 7.

Item	Effort (pd)	Fee (excl. VAT)
P0 — Initiate	«NUMBER»	«fee»
P1 — Profile and data quality	«NUMBER»	«fee»
P2 — Duplicate analysis	«NUMBER»	«fee»
P3 — Merge and data model	«NUMBER»	«fee»
P4 — Architecture and roadmap	«NUMBER»	«fee»
Total	«NUMBER»	«fee»
Change requests	Per person-day	«day rate»

Table 14 — Fees. Band: «BAND». All fees exclude VAT.

Payment Item	Rate	Amount (excl. VAT)
Contract signature	«%»	«amount»
Acceptance of the deliverables (P4)	«%»	«amount»

Table 15 — Payment schedule. All fees exclude VAT.

The fee does not include:

- Implementation of the golden record (service B), additional domains and run (service C).
- Licence costs of the data quality, matching and MDM tools, including the licence used during the assessment.
- Travel and accommodation outside «CITY».
- Additional work approved through change requests.

10. Next Step

The results of the assessment are the basis of the next steps. The usual follow-on work is:

Need	Follow-On Work
Golden record of the first domain	Service B Domain Foundation: foundation and the domain module on the path chosen in the roadmap (D8)
Further domains; keeping match quality under control	Service C Multi-domain & Run: C1 Additional domain (one-time), C2 Run (monthly)
Steward organisation, ownership, enterprise data quality	Data Governance
Personal data in non-production MDM copies	Data Privacy & Test Data (KVKK)
Segments, journeys and activation on the golden customer ID	CDP work, proposed separately

Table 16 — Follow-on work.

After the results presentation, service B is proposed on the basis of the roadmap of this assessment: the foundation once and the first domain on the chosen path.

11. Commercial Terms

11.1 General Terms

- All fees in this proposal are stated in Turkish lira and exclude VAT. Statutory taxes, duties and charges are not included in the fees.
- The proposal is valid until «proposal date + 1 month».
- The fees are valid on condition that the work starts by «price validity date». If the start moves beyond that date for any reason, the fees and pricing terms are reassessed by mutual agreement in the light of the economic and financial conditions at the time of the work.
- This work is offered at a fixed fee, based on the sizing values in Table 4 and the assumptions in Section 7.

- «OPTIONAL» If the contract for service B is signed within «NUMBER» months of the acceptance of this work, the fee of this work is deducted from the fee of service B.
- The start date of the work is agreed with «CUSTOMER». All activities are carried out mainly online; on-site meetings take place within «CITY».
- The match and merge rules, the survivorship rules and the decisions on merging or separating records remain with «CUSTOMER» (business data owners and data governance); Komtaş implements the decisions recorded in writing. «CUSTOMER» remains the data controller for the personal data processed in the work.
- Payment follows the payment schedule in Section 9. Invoices are payable within «NUMBER» days of the invoice date.
- Scope changes are managed through a written change request; no change is implemented before its impact analysis is approved.
- The parties keep confidential all information they access within the scope of the work. A separate non-disclosure agreement is signed where needed.
- The rights of use of the deliverables, including rule documents, data models, mappings, configurations and documentation, belong to «CUSTOMER»; Komtaş retains its intellectual property rights in its methodology, templates, accelerators and general know-how. The terms of use of the accelerators in Annex 1 are «FIELD».
- This proposal forms an integral annex to the contract to be signed by the parties. In the event of a conflict between the contract and the proposal, the contract prevails.

11.2 Proposal Contact Details

Questions on this proposal and its scope can be addressed to the contacts below.

Area of Responsibility	Full Name	Title	Contact
Commercial	«full name»	«title»	«e-mail / phone»
Technical	«full name»	«title»	«e-mail / phone»

11.3 Proposal Annexes

This proposal is submitted with the following annexes:

- ANNEX-1 — Accelerators
- ANNEX-2 — About Komtaş

ANNEX-1 — Accelerators

The work uses eight accelerators: rule catalogues, rule sets, templates, dictionaries and question sets that shorten the analysis and the implementation. Each accelerator is described below with the place where it is used in this service.

1. Turkish Customer Data Quality Rule Catalogue

Item	Description
Purpose	Check and cleanse Turkish customer data with tested rules instead of writing each rule from the start «DAMALINK DOĞRULASIN»
Content	Rules per field for first name, surname, company title, TCKN and VKN (length, checksum, repeated digits, verification by identity query where available, uniqueness per customer), phones, e-mail, address, city and district, occupation and education. Each rule has a data quality dimension (completeness, validity, accuracy, consistency, uniqueness, timeliness), a cleanse option (cleansing or standardisation), a category (empty, invalid, problematic, unverified, not unique) and a quality code per domain, column and dimension
Use in this service	P1: data quality analysis of the sources (Section 3.2)

Table 17 — Turkish Customer Data Quality Rule Catalogue.

2. Match Rule Set for Turkish Customer Data

Item	Description
Purpose	Start the match design from a tested set of deterministic and fuzzy rule combinations for Turkish customer data «DAMALINK DOĞRULASIN»
Content	Combinations of a name score with an identifier, with example thresholds: name and TCKN (score ≥70), name and VKN (≥80), company title and VKN (≥70), name and mobile phone (≥90, or ≥85 with the same date of birth), name and e-mail (≥90, common free e-mail domains excluded). A rule for a changed surname (for example after marriage) uses the first name, the mobile phone or TCKN and the same date of birth (≥80). Negative rules: different filled TCKNs or dates of birth block a match. The thresholds are examples and are tuned on the data of «CUSTOMER»
Use in this service	P2: draft match rules and match scores (Section 3.3)

Table 18 — Match Rule Set for Turkish Customer Data.

3. Survivorship Template

Item	Description
Purpose	Decide per field which value survives in the golden record «DAMALINK DOĞRULASIN»
Content	Per field: the most frequent non-blank value, then the most recent update; trust by source or channel where the sources differ in reliability; a worked golden record example built from two sources. It assumes basic cleansing before matching and a limited number of tuning rounds (for example five)
Use in this service	P3: merge rule document and golden record definition (Section 3.4)

Table 19 — Survivorship Template.

4. Source-to-Target Matrix and Data Model Templates

Item	Description
Purpose	Document every column from the source to the golden record in a known structure «DAMALINK DOĞRULASIN»
Content	Matrix landing → staging → base object with the rule per column (cleansing function, data quality score used by trust); data model document template for domains, entities, relationships and history
Use in this service	P3: conceptual data model; P4: outline of the source-to-target matrix for service B

Table 20 — Source-to-Target Matrix and Data Model Templates.

5. Reference Dictionaries

Item	Description
Purpose	Standardise and validate values against Turkish reference lists «DAMALINK DOĞRULASIN»
Content	City and district, country, occupation, education, noise words and prefixes (for example titles written inside names)
Use in this service	P1: standardisation and validation of values in the profiling (Section 3.2)

Table 21 — Reference Dictionaries.

6. Analysis Report Set

Item	Description
Purpose	Show the size of the duplicate problem in figures the business understands «DAMALINK DOĞRULASIN»
Content	Customer counts, active and passive customers, match frequency, unique active and passive customers, cluster report
Use in this service	P2: duplicate rate findings (D3)

Table 22 — Analysis Report Set.

7. Reference Data Decision Table

Item	Description
Purpose	Decide between a reference data product and an in-house solution on agreed criteria «DAMALINK DOĞRULASIN»
Content	Criteria: ready data model, data quality functions, real-time services, fuzzy search and match, row and column security, steward user interface, hierarchies and crosswalk mappings (the same meaning with different codes in different systems), approval workflow, import and export, history, trust, merge and unmerge, monitoring and alerts. For each criterion the product and the in-house option are compared, with the situations in which each fits
Use in this service	P4: reference data option in the target architecture, if reference data is in scope

Table 23 — Reference Data Decision Table.

8. Requirement Question Set

Item	Description
Purpose	Collect the facts on which the design depends in a structured way «DAMALINK DOĞRULASIN»
Content	Architecture and data flows; business problems; domains and priority; master tables and columns; incremental changes; volumes, active and passive records, new records per day; technology standards; real-time needs (queries per day, response time, concurrency); cleansing use cases; hierarchies; consuming systems; steward users and approval flow; third-party integrations
Use in this service	P0: requirement document (D1)

Table 24 — Requirement Question Set.

ANNEX-2 — About Komtaş

> *FILL NOTE — the figures in Table 25 and in the bullets below come from the proposals of 2026. Check them against the current corporate profile before sending.*

Komtaş is an independent information technology company that has specialised in enterprise data management in Türkiye since 1989. More than 35 years of focus on a single field has given it an end-to-end view that follows data from the moment it is created to the moment a decision is taken.

Indicator	Value
Founded	1989 — more than 35 years of continuous data-focused activity
Specialist staff	250+ data engineers, architects, consultants and analysts
Offices	Istanbul, Ankara, Izmir, Dubai
Strategic partnerships	10+ global technology vendors
Focus area	Data governance, data architecture, analytics, artificial intelligence and AI agent based solutions
Positioning	"From Data to Agents" — integrated capability from data to AI agents

Table 25 — Komtaş corporate profile.

Service Capabilities

The service portfolio of Komtaş covers the whole life cycle of a data initiative:

- **Data Governance and Data Management:** data governance maturity assessment, framework and organisation design, policy and process design, data catalogue, business glossary, data quality management, master data management, data privacy and classification.
- **Data Architecture and Engineering:** data warehouse and data lake architectures, lakehouse design, data integration and streaming architectures, cloud and on-premises modernisation.
- **Analytics and Artificial Intelligence:** enterprise reporting, advanced analytics, machine learning models, generative AI applications and AI governance.
- **Managed Services and Support:** P1 / P2 / P3 support for production systems, capacity and performance management, continuous improvement services.
- **Training and Capability Building:** product training, role-based data governance training, train-the-trainer programmes.

Master Data Management Experience

> *FILL NOTE — the references in Table 26 are anonymous. Do not add institution names, system names, contact persons or further result figures without written approval; «YEAR» is filled once the year of the project is confirmed, «RESULT» is deleted if no measured result is approved, and the «REFERENCE PROJECT» row is deleted if there is no further approved reference.*

Master data work in the scope of this package is listed below. Reference calls can be arranged on request, subject to the approval of the institutions concerned. «DIGITALLENCY DOĞRULASIN»

Institution	Work	Measured Result	Year
An insurance group — single customer view	Four group systems brought into one environment; duplicate customers cleaned within and across the group companies; Informatica PowerCenter, Data Quality and MDM	Access to reports reduced from one week to one day	«YEAR»
An e-commerce company — product information management	Product information management (PIM)	«RESULT»	«YEAR»
«REFERENCE PROJECT»	«FIELD»	«RESULT»	«YEAR»

Table 26 — Master data management references (anonymous).

Why Komtaş

- **Focus:** Komtaş has worked only in the data field for more than 35 years, with more than 250 specialists and 4 offices.
- **From assessment to run:** assessment, implementation, additional domains and monthly run are provided by the same organisation (Section 10).
