Domain Foundation

Technical and Commercial Proposal

Foundation and one master data domain of «CUSTOMER» on the Consolidation or the Hub path: cleansing, match and merge, golden record, steward process and distribution to the agreed systems

Proposal No: KOMTAS-«CUSTOMER ABBREVIATION»-MDM-B-«YEAR»-«SEQUENCE»

Proposal Date: «dd Month yyyy»

Validity: «proposal date + 1 month»

VARIABLE GLOSSARY — in this template only the fields inside « » change per customer. All other text is fixed.

Identity: «CUSTOMER» short customer name used in the text · «CUSTOMER NAME» full legal name (cover) · «GROUP COMPANIES» group companies in scope; delete the line for a single company · «CUSTOMER ABBREVIATION» short code in the proposal number · «YEAR» year (proposal number; year of a reference project) · «SEQUENCE» proposal sequence number · «dd Month yyyy» proposal date · «proposal date + 1 month» end of validity · «price validity date» latest start date for which the fees stay valid

Context: «CUSTOMER CONTEXT» one paragraph: sector, group companies, main operational systems holding customer, product or reference data (core, CRM, ERP, channels), data warehouse, current practice for duplicate records, reason for the request · «TRIGGER» reason for the work (e.g. duplicate customers across systems or group companies, KVKK data subject requests, group risk or legal reporting, a CRM or core system renewal, a merger, an omnichannel programme, a CDP project that needs a golden customer ID, an unmanaged product catalogue) · «A REF» number and date of the MDM Assessment (service A) report, or of the equivalent analysis, on which the proposal is based

Scope: «PLATFORM» technology option chosen for the work: on-premises Informatica products or Informatica IDMC (cloud); see the technology options table · «BAND» sizing band S, M or L from the proposal input form

Paths: «PATH — CONSOLIDATION» block of the Consolidation implementation path; delete every block of this path if the Hub path is chosen · «PATH — HUB» block of the Hub implementation path; delete every block of this path if the Consolidation path is chosen

Modules: «MODULE — CUSTOMER 360» block of the Customer 360 domain module (with the Vehicle variant); delete every block of this module if it is not in scope · «MODULE — PRODUCT 360 / PIM» block of the Product 360 / PIM domain module; delete every block of this module if it is not in scope · «MODULE — REFERENCE DATA» block of the Reference Data domain module; delete every block of this module if it is not in scope

Commercial: «OPTIONAL» item kept or deleted by sales; if kept, delete the marker · «fee» fee excl. VAT · «amount» payment amount excl. VAT · «day rate» person-day rate (change requests) · «CITY» city where on-site meetings are free of charge

Values: «NUMBER» numeric value (count, sample size, days, weeks, months, hours) · «%» percentage (payment rate, precision of the cluster review) · «FIELD» free text (e.g. names of source or consuming systems, a product version, a term agreed separately)

Annex: «REFERENCE PROJECT» further reference project approved for this proposal (no names without permission); otherwise delete the row · «RESULT» measured result of a reference project, only if measured and approved for use; otherwise delete the line

Contacts: «full name» contact name · «title» contact title · «e-mail / phone» contact details

Markers: the path and module blocks are resolved as described in the fill notes on the first page. «OPTIONAL» items are kept or deleted by sales. The orange DAMALINK DOĞRULASIN and DIGITALLENCY DOĞRULASIN tags mark draft statements to be verified before use. FILL NOTE boxes are internal and are deleted before sending.

Contents

FILL NOTE — this template is for service B (Domain Foundation) and is used only after service A (MDM Assessment) or an equivalent analysis of «CUSTOMER», referenced as «A REF». If neither exists, service A is proposed first.

Technology option: the work is carried out either with on-premises Informatica products or with Informatica IDMC (cloud); the choice is a scope item («PLATFORM», Table 10). Licences are not part of this proposal unless an optional licence line is kept. Product names and versions are confirmed with the licence position of «CUSTOMER» before sending.

Paths: every heading, paragraph, table row and bullet starting with «PATH — CONSOLIDATION» or «PATH — HUB» belongs to that implementation path. Keep the path chosen in «A REF» and delete every block of the other path; in the blocks kept, the placeholder text stays as the path name and only the guillemets are deleted. The paths apply to the Customer 360 module; if the domain is Product 360 / PIM or Reference Data, delete the blocks of both paths.

Modules: service B covers one domain. Every heading, paragraph, table row and bullet starting with «MODULE — CUSTOMER 360», «MODULE — PRODUCT 360 / PIM» or «MODULE — REFERENCE DATA» belongs to that module. Keep the module of the domain in scope and delete the blocks of the other two; the Vehicle variant is part of the Customer 360 module and is kept or deleted with its «OPTIONAL» marker. A second domain is proposed under service C1.

The foundation is counted once. A domain added later under service C1 uses the same foundation.

Statements followed by an orange tag are draft assumptions of the package and are verified before the template is used. DAMALINK DOĞRULASIN: approach, phases, deliverables, durations, effort, bands and record packs, roles, tools and their IDMC equivalents, data quality, match and merge rule patterns and thresholds, the reference data decision table, accelerators, acceptance criteria. DIGITALLENCY DOĞRULASIN: the insurance group and e-commerce references. After verification only the tag is deleted. No proposal is sent with a tag in it.

Order of completion: «A REF» → «PLATFORM» (Table 10) → path (Section 2.5) → module (Section 2.6) → Table 2 → effort and durations (Table 12) → acceptance values (Table 14) → fees (Section 9) → Annex 2 → remaining « » fields. No commercial figures other than the fees in Section 9 are written into this proposal.

1. Purpose

«CUSTOMER CONTEXT»

The aim of this proposal is to build the golden record of one master data domain of «CUSTOMER» on the basis of the assessment «A REF». A foundation is set up once; on it, the records of the domain are cleansed, matched and merged, the golden record is reviewed by data stewards and distributed to the agreed systems. The reason for the work is «TRIGGER».

The implementation path of this proposal is:

- **«PATH — CONSOLIDATION»:** batch cleansing and standardisation, match and merge, a golden record table with a cross-reference to the source records, batch distribution to the data warehouse, CRM and the other agreed consumers.
- **«PATH — HUB»:** an MDM hub with data quality in the load, match and merge, trust and survivorship, a steward user interface with approval workflow, hierarchies and relationships, batch and real-time services and distribution.

The domain module in scope of this proposal is:

- **«MODULE — CUSTOMER 360»:** individual and corporate customers within and across the group companies, with their relationships; «OPTIONAL» with the Vehicle variant for automotive, insurance or fleet business.
- **«MODULE — PRODUCT 360 / PIM»:** products and variants, enrichment and publication to the sales channels.
- **«MODULE — REFERENCE DATA»:** code lists, crosswalk mappings across systems and an approval workflow.

The fee consists of one line for the foundation, counted once, and one line for the domain module (Section 9).

2. Scope

2.1 Service Structure

Service	Focus	Result	Pricing
A — MDM Assessment	Profiling and data quality analysis of the master data sources, duplicate analysis, draft match and merge rules, golden record definition, conceptual data model, target architecture, choice of the implementation path and roadmap; 4 to 8 weeks «DAMALINK DOĞRULASIN»	Rule documents, duplicate rate, architecture, roadmap and estimate for B	Fixed fee
B — Domain Foundation	Foundation once and one domain module, on the Consolidation path (batch cleansing, match and merge, golden record table) or on the Hub path (MDM hub with steward workflow and services)	Golden records of one domain, distributed to the agreed systems	Foundation once + domain module fee
C — Multi-domain & Run	C1 Additional domain (one-time per domain) on the same foundation, with cross-domain relationships. C2 Run (monthly): match and merge tuning, steward support, data quality and match quality monitoring, new sources, monthly report	Further domains mastered; quality of the golden records kept under control	C1 fixed fee per domain; C2 monthly fee

Table 1 — Service structure. This proposal covers service B.

2.2 Prerequisite

This proposal is based on the assessment «A REF». Its data quality analysis, duplicate findings, match and merge rule documents, conceptual data model, high-level architecture and roadmap are the basis of the work.

If the assessment was not carried out by Komtaş, the equivalent analysis of «CUSTOMER» is reviewed in P0 (sources, data quality findings, match and merge rules, data model, architecture). The build starts only after the review is accepted. «DAMALINK DOĞRULASIN»

2.3 Sizing Basis

Sizing is based on the values below, taken from «A REF» and the proposal input form. The values are confirmed in P0 (Section 7.1).

Sizing Input	Value
Source systems	«NUMBER»
Records (millions; active / passive)	«NUMBER» / «NUMBER»
Match rules	«NUMBER»
Consuming systems / integrations	«NUMBER»
New or changed records per day	«NUMBER»
Technology option	«PLATFORM»
Sizing band	«BAND»

Table 2 — Values on which sizing is based. Source: «A REF» and the proposal input form.

The band (S / M / L) is the highest band reached by at least three of the drivers: source systems (S ≤3 · M 4–8 · L >8), records (S ≤10 M · M ≤30 M · L ≤50 M), match rules (S ≤20 · M 21–60 · L >60) and consuming systems (S ≤3 · M 4–8 · L >8). On the Consolidation path, the band follows the active customers (S ≤3 M · M ≤5 M · L ≤10 M). More than 50 M records is treated as a programme and sized separately. «DAMALINK DOĞRULASIN»

2.4 Foundation

The foundation is built once and is used by the domain of this proposal and by the domains added later: «DAMALINK DOĞRULASIN»

#	Topic	Content
1	Tool installation and configuration	Products of the chosen option («PLATFORM»), environments, connections to the sources, users and roles, logging
2	Data quality rule catalogue and reference dictionaries	Rules from «A REF» and from accelerator 1, reference dictionaries from accelerator 5, loaded into the tool
3	Standards and documents	Naming standards, source-to-target matrix and data model document templates (accelerator 4), technical document structure
4	Steward process	Steward roles, tasks and approval steps agreed with the data governance office of «CUSTOMER»

Table 3 — Foundation topics.

2.5 Implementation Path

The path chosen in «A REF» is built. The two paths are compared below; the blocks of the path not chosen are deleted.

Item	Consolidation	Hub
What is built	Batch cleansing and standardisation, match and merge, a golden record table with a cross-reference to each source record «DAMALINK DOĞRULASIN»	MDM hub: data model, landing, staging and base objects, data quality in the load, match and merge, trust and survivorship, steward user interface with approval workflow, hierarchies and relationships, batch and real-time services
Distribution	Batch to the data warehouse, CRM and the other agreed consumers	Batch and real time to operational and analytical systems
Steward work	Review of match results through reports and work lists	Tasks and approvals in the steward user interface
Licence	Data quality product; lower licence cost	MDM product
Typical duration	About 3, 5 or 6+ months by band	About 5 months or more
When it fits	Single customer view for analytics and reporting, batch consumers, a first step towards a hub	Operational golden record, real-time consumers, hierarchies, steward workflow

Table 4 — Implementation paths of service B.

«PATH — CONSOLIDATION» Scope of the Path

Item	Value
Source tables or files per system	«NUMBER»
Active customers (millions)	«NUMBER»
Golden record table and cross-reference: target database	«FIELD»
Consumers fed in batch (data warehouse, CRM, others)	«FIELD»
Batch frequency	«FIELD»

Table 5 — «PATH — CONSOLIDATION» scope of the path.

«PATH — HUB» Scope of the Path

Item	Value
Base objects (entities) in the hub	«NUMBER»
Steward users / approval steps	«NUMBER» / «NUMBER»
Hierarchies and relationship types	«NUMBER»
Real-time services (queries per day, response time)	«FIELD»
Consumers fed in batch / in real time	«FIELD»

Table 6 — «PATH — HUB» scope of the path.

2.6 Domain Module in Scope

The module of the domain in scope is filled from «A REF». The blocks of the other modules are deleted.

«MODULE — CUSTOMER 360» Scope of the Module

Item	Value
Customer types: individual / corporate; Turkish / foreign	«FIELD»
Group companies in scope	«FIELD»
Relationships and hierarchies (household, company group, customer–institution)	«FIELD»
Vehicle variant: vehicle as a related entity (chassis number, plate, owner and insured relations)	«OPTIONAL»

Table 7 — «MODULE — CUSTOMER 360» scope of the module.

«MODULE — PRODUCT 360 / PIM» Scope of the Module

Item	Value
Products / variants	«NUMBER» / «NUMBER»
Attributes to enrich	«NUMBER»
Sales channels to publish to	«FIELD»
Source systems with daily delta	«FIELD»

Table 8 — «MODULE — PRODUCT 360 / PIM» scope of the module.

«MODULE — REFERENCE DATA» Scope of the Module

Item	Value
Code lists	«NUMBER»
Systems with crosswalk mappings	«NUMBER»
Approval workflow steps	«NUMBER»
Solution: product or in-house (accelerator 7)	«FIELD»

Table 9 — «MODULE — REFERENCE DATA» scope of the module.

2.7 Technology Options

The work is built with the option chosen in «A REF»:

Need	On-premises (Informatica)	IDMC (cloud)
MDM hub	Informatica MDM Multidomain, with the steward user interface (IDD) and the SIF services	MDM SaaS (Customer 360 / Business 360) «DAMALINK DOĞRULASIN»
Product information	Informatica Product 360 (PIM)	Product 360 SaaS
Reference data	Informatica Reference Data Management (RDM) or an in-house solution	Reference 360
Data quality and matching	Informatica Data Quality (IDQ)	Cloud Data Quality
Integration	PowerCenter	Cloud Data Integration
Support status of the on-premises version in use	«FIELD»	—

Table 10 — Technology options. Option chosen: «PLATFORM».

2.8 Boundaries to Other Services

- **Data Governance:** the data steward organisation, data ownership and policies belong to the Data Governance service. This package configures the steward workflow in the MDM tool and sets up the steward process together with the data governance office of «CUSTOMER».
- **Data Quality:** the enterprise data quality programme belongs to the Data Governance service. This package applies data quality rules to the master data in scope.

- **Data Privacy:** masking of personal data in non-production copies of the MDM environment is the subject of the Data Privacy & Test Data (KVKK) service.
- **Source systems:** changes in the source systems are made by «CUSTOMER» or its suppliers; this package defines the interfaces they need.

MDM and CDP

Master data management provides the operational golden record. Identities are resolved with deterministic and fuzzy rules on identifiers, the surviving value is chosen per field, hierarchies are kept and the result is written back to the operational systems; the owners are data governance and IT. A customer data platform (CDP) serves marketing and activation: behavioural and event data, segments, audiences, journeys and channel activation; the owner is marketing. The two work together: the CDP consumes the golden customer ID and attributes from MDM. MDM does not hold clickstream data and does not orchestrate consent; consent attributes can be mastered in it. CDP work is outside the scope of this proposal.

3. Approach

3.1 Approach Steps

The work follows the steps Access → Analyze → Design & Apply → Manage. Service A has analysed the sources; service B confirms the analysis, designs the data model and the rules, builds cleansing, match, merge and distribution, and sets up the management of the golden record: schedules, monitoring, user authorisation, logs and the addition of new sources. «DAMALINK DOĞRULASIN»

3.2 «PATH — CONSOLIDATION» Approach

Records of the sources are loaded in batch, cleansed and standardised with the data quality rules and the reference dictionaries, then matched with the match rules of «A REF». Matched records form clusters; the merge rules choose the surviving value per field and write one golden record per cluster to the golden record table, with a cross-reference from each source record to its golden record. Match results below the automatic threshold are listed for review by the data stewards. The golden record table is distributed in batch to the agreed consumers. «DAMALINK DOĞRULASIN»

3.3 «PATH — HUB» Approach

The hub data model is built from the conceptual model of «A REF». Source data passes through landing and staging tables into the base objects, with cleansing functions and data quality scores applied in the load as set out in the source-to-target matrix. Matching runs in batch and on new records; trust settings per source and the survivorship rules decide the golden values. Data stewards work in the steward user interface: they review match candidates, merge or unmerge records and approve changes through the approval workflow. Hierarchies and relationships are kept in the hub. Batch and real-time services give the golden record to the operational and analytical systems. «DAMALINK DOĞRULASIN»

3.4 «MODULE — CUSTOMER 360» Approach

Individual and corporate customers are mastered within and across the group companies in scope. Turkish identifiers (TCKN, VKN) are validated with the data quality rules; names, addresses, phones and e-mails are standardised; matching uses the rule set for Turkish customer data with negative rules that prevent false merges. Relationships are kept between customers (household, company group) and between customers and institutions, so that group risk and customer counts can be reported on clean data. «DAMALINK DOĞRULASIN»

«OPTIONAL» Vehicle variant: for automotive, insurance or fleet business, the vehicle is kept as an entity related to the customer, identified by its chassis number and plate, with owner and insured relations. It is part of the Customer 360 module, not a separate domain. «DAMALINK DOĞRULASIN»

3.5 «MODULE — PRODUCT 360 / PIM» Approach

Product information is mastered in a two-tier product–variant model. Product data is received from the source systems in a daily batch delta, enriched with the attributes, descriptions and media needed by the channels, approved and published to the sales channels. The module holds product data only; transactional data such as stock and prices remains in the source systems. Deduplication of reference values used by products (for example colour codes) is carried out by «CUSTOMER» unless the Reference Data module is in scope. «DAMALINK DOĞRULASIN»

3.6 «MODULE — REFERENCE DATA» Approach

The code lists in scope are kept in one place, with crosswalk mappings that link the codes used for the same meaning in different systems. Changes pass through an approval workflow and are distributed to the systems. The choice between a reference data product and an in-house solution is made on the reference data decision table (accelerator 7, Annex 1). «DAMALINK DOĞRULASIN»

3.7 Golden Record Validation

Before go-live, the golden records are validated in parallel with the current systems: customer counts and duplicate rates are compared with «A REF», a sample of clusters is reviewed by the data stewards, false merges and missed matches are corrected by tuning the rules, and the results are approved by the business data owners. «DAMALINK DOĞRULASIN»

4. Activities and Timeline

4.1 Phases and Exit Criteria

The work is carried out in five phases. P0 and P1 build the foundation once; P2 to P4 build the domain module on the chosen path. «DAMALINK DOĞRULASIN»

Phase	Activities	Exit Criterion
P0 Kick-off and design confirmation	Review of «A REF», data model, source-to-target matrix, match and merge rule documents completed	Design, rules and plan approved in writing
P1 Foundation	Tool installation and configuration, data quality rules, reference dictionaries, standards, steward process	Tools running; rule catalogue approved
P2 Build	Loads, cleansing, match and merge, golden record, steward workflow, hierarchies, distribution	Domain built in the test environment
P3 Validation and test	Parallel validation of the golden records, rule tuning, performance and integration tests	Acceptance criteria of Table 14 met
P4 Go-live and handover	Initial load in production, schedules, monitoring, documents, training of stewards and IT	Handover approved

Table 11 — Phases and exit criteria.

4.2 Effort and Durations

FILL NOTE — take the effort and the durations from the proposal input form (mdm-customer-360-3b-domain-foundation-girdi-formu): foundation once + domain module × path × band + optional lines. Draft values:

Foundation, once: S ~25 pd · M ~40 pd · L ~60 pd. Customer 360 on the Consolidation path: S ~60 pd (about 3 months) · M ~100 pd (about 5 months) · L ~140 pd (6 months or more). Customer 360 on the Hub path: S ~110 pd · M ~160 pd · L ~220 pd (5 months or more). Product 360 / PIM: S ~80 pd (4 months) · M ~110 pd (5 months) · L ~140 pd (6 months). Reference Data: S ~30 pd · M ~50 pd · L ~80 pd. «DAMALINK DOĞRULASIN»

The values are not based on recorded effort. Delete this box before sending.

Line	Effort (pd)	Duration (weeks)
Foundation (P0 – P1)	«NUMBER»	«NUMBER»
«MODULE — CUSTOMER 360» «PATH — CONSOLIDATION» (P2 – P4)	«NUMBER»	«NUMBER»
«MODULE — CUSTOMER 360» «PATH — HUB» (P2 – P4)	«NUMBER»	«NUMBER»
«MODULE — PRODUCT 360 / PIM» (P2 – P4)	«NUMBER»	«NUMBER»
«MODULE — REFERENCE DATA» (P2 – P4)	«NUMBER»	«NUMBER»
Total	«NUMBER»	«NUMBER»

Table 12 — Effort and durations. Band: «BAND».

4.3 Schedule

The detailed schedule is agreed in P0. The total duration is «NUMBER» weeks, provided the assumptions in Section 7 hold. Delays in access, in rule approvals or in the provision of environments move the schedule by the same amount.

5. Deliverables and Acceptance

5.1 Deliverables

Documents are delivered in Turkish, in editable format, together with a PDF copy. Rules, mappings and configurations remain in the environment of «CUSTOMER».

#	Deliverable	Phase	Content
D1	Detailed design	P0	Data model document, source-to-target matrix, match and merge rule documents «DAMALINK DOĞRULASIN»
D2	Foundation in operation	P1	Tools, environments, standards, steward roles
D3	Data quality rule catalogue and reference dictionaries	P1	Rules per field with dimensions and quality codes, loaded dictionaries
D4	Golden records in operation	P2 – P4	Golden records with cross-reference, hierarchies, distribution to the agreed consumers
D5	Steward process and workflow	P2 – P4	Steward tasks, approval steps, work lists or user interface
D6	Validation report	P3	Counts, duplicate rates, reviewed clusters, precision, tuning made
D7	Technical document	P4	Architecture, flows, schedules, services, operation of the jobs
D8	Handover package	P4	Operation and steward playbook, training of the teams of «CUSTOMER»

Table 13 — Deliverables.

5.2 Acceptance

Line	Acceptance Criterion
Foundation	Tools running on the chosen option; data quality rule catalogue approved; steward roles agreed «DAMALINK DOĞRULASIN»
Domain module	Golden records produced for the agreed sources; a sample of «NUMBER» clusters reviewed by the data stewards with a precision of at least «%»; steward workflow running; golden records distributed to the agreed consumers

Table 14 — Acceptance criteria per line.

The foundation and the domain module are accepted separately. Each deliverable is reviewed by «CUSTOMER» within «NUMBER» working days of delivery. If no written objection is received in that period, the deliverable is deemed accepted.

6. Customer Responsibilities

«CUSTOMER» is responsible for the items below. A delay in any of them moves the schedule by the same amount.

- Appoint a project coordinator who is available throughout the work.
- Provide the servers or the cloud services of the chosen option («PLATFORM») with valid licences, and the access to the sources in scope.
- Have the match and merge rules approved by the business data owners within «NUMBER» working days of their presentation.
- Provide data stewards with the agreed capacity for the validation and for the steward process after go-live.
- Make the changes needed in the source and consuming systems to send and receive data through the agreed interfaces.
- Deploy the changes to production through the change process of «CUSTOMER».

The participation expected from «CUSTOMER» is: «DAMALINK DOĞRULASIN»

Role	Expected Contribution	Participation
Project sponsor	Approval of design and acceptance	P0, P3 – P4
Business data owners	Approval of the match and merge rules and of the validation results	P0, P3
Data stewards	Review of clusters, steward tasks, approvals	P2 – P4
Data governance office	Steward roles and process, data quality rules	P0 – P1, P4
IT integration	Interfaces of the source and consuming systems, schedules	P0, P2 – P4
Database administrators	Environments, connections, performance	P0 – P4

Table 15 — Expected participation of «CUSTOMER». Total expected effort is «NUMBER» person-days.

7. Assumptions and Out of Scope

7.1 Assumptions

The duration, effort and fee in this proposal are based on the assumptions below. If they do not hold, the impact is assessed through a change request.

- The work starts within «NUMBER» working days of contract signature.
- The values in Table 2 come from «A REF» and are confirmed in P0. If they indicate a different band, effort and duration are reassessed at the end of P0. Up to «NUMBER» tuning rounds of the match and merge rules are included (for example five). «DAMALINK DOĞRULASIN»
- The licences of the chosen option («PLATFORM») are provided by «CUSTOMER» and cover the domain and the volumes in scope, unless the optional licence line in Section 9 is kept.
- The source data is loaded by «CUSTOMER» into the agreed landing area, or made available through the agreed interfaces.
- Source records are not changed by this work; corrections in the sources are made by «CUSTOMER» on the basis of the golden record.
- The work is carried out mainly remotely, with access to the environments of «CUSTOMER»; design workshops and acceptance reviews can be held on site in «CITY».
- The working language and the language of the deliverables is Turkish.

7.2 Out of Scope

The topics below are outside the scope of this proposal. If requested, they are assessed and proposed separately. «DAMALINK DOĞRULASIN»

- CDP, campaign management and channel activation.
- Changes in the source systems.
- Enterprise data quality work outside the master data in scope.
- Procurement of licences, except the optional IDMC line in Section 9.
- Domains not listed in Section 2.6 (service C1) and run after handover (service C2).

7.3 Risks and Change Management

Risk	Impact	Mitigation
Business disagreement on the match rules	False merges, rework, delayed acceptance	Rules approved in P0; negative rules; cluster reviews in P3
Low quality of the source data	Lower match rates, larger steward queues	Cleansing rules from «A REF»; corrections fed back to the sources
Steward capacity	Backlog of match candidates	Capacity agreed in P0; thresholds set to keep the queue manageable
Real-time performance	Response times not met	Volumes and response times agreed in P0; performance test in P3
Support status of on-premises product versions	Upgrade or change of option	Version checked in P0; IDMC option kept open

Table 16 — Risks.

Any request that affects the scope, the schedule or the fee is handled through a written change request. It is not carried out before its impact and fee are approved.

8. Team

8.1 Komtaş Team

Role	Responsibility	Participation
Engagement Lead	Plan, rule approvals, acceptance, reporting	P0 – P4 «DAMALINK DOĞRULASIN»
MDM Architect	Design, data model, match and merge rules, services, technical document	P0 – P4
MDM / IDQ Developers	Installation, loads, cleansing, match and merge, workflow, distribution, tests	P1 – P4; «NUMBER» people
Data Quality Analyst	Data quality rules, reference dictionaries, validation of the golden records	P1 – P3
Business Analyst	Steward process, cluster reviews with the data owners, training	P0, P2 – P4, part time

Table 17 — Komtaş team and roles.

- If a change in the team is needed, the replacement has at least equivalent qualifications and is notified to «CUSTOMER» in advance.

8.2 Governance and Reporting

- Weekly progress meeting on status, open rule approvals and schedule.
- Steering meeting with the sponsor at the end of the foundation and of the validation.
- Any issue that affects the schedule or the scope is reported in writing in the week it is found.

9. Effort and Fees

9.1 Basis of the Fee

The fee consists of a fixed fee for the foundation, counted once, and a fixed fee for the domain module on the chosen path. Optional lines apply only if kept. Each line covers the scope described in Sections 2 and 3 for that line.

9.2 Fees

#	Fee Line	Effort (pd)	Fee (excl. VAT)
F0	Foundation (once, used by all domains)	«NUMBER»	«fee»
B1	«MODULE — CUSTOMER 360» «PATH — CONSOLIDATION»	«NUMBER»	«fee»
B1	«MODULE — CUSTOMER 360» «PATH — HUB»	«NUMBER»	«fee»
B2	«MODULE — PRODUCT 360 / PIM»	«NUMBER»	«fee»
B3	«MODULE — REFERENCE DATA»	«NUMBER»	«fee»
O1	«OPTIONAL» IDMC subscription and onboarding	«NUMBER»	«fee»
O2	«OPTIONAL» Migration of historical data	«NUMBER»	«fee»
	Total	«NUMBER»	«fee»

Table 18 — Fees per line. Band «BAND». All fees exclude VAT.

«OPTIONAL» Line O1 covers the IDMC subscription of the scope in Table 2 («FIELD») and the onboarding of the organisation of «CUSTOMER» to IDMC. Line O2 covers the migration of historical records into the golden record structure for the period «FIELD».

9.3 Payment Schedule

Payment Item	Rate / Basis	Amount (excl. VAT)
Exit approval of P1 — foundation	F0	«amount»
Exit approval of P2 — domain built	«%» of the module fee	«amount»
Acceptance of the domain module (Table 14)	«%» of the module fee	«amount»

Table 19 — Payment schedule.

9.4 Change Requests

Work outside the scope of this proposal is offered on the basis of person-days × day rate («day rate», excl. VAT) and is carried out only after written approval.

9.5 Not Included in the Fee

- Licence and infrastructure costs of the chosen option («PLATFORM»), unless line O1 is kept.
- Changes in the source and consuming systems.
- Additional domains and run after handover (service C).
- Additional work approved through change requests.

10. Next Step

After handover, the golden record has to stay correct as new sources, records and domains arrive. The usual follow-on work is:

Need	Follow-On Work
Match and merge tuning, steward support, monitoring, new sources	Service C2 Run: monthly capacity
Further domains and cross-domain relationships	Service C1 Additional domain on the same foundation
Steward organisation, ownership, enterprise data quality	Data Governance
Personal data in non-production MDM copies	Data Privacy & Test Data (KVKK)
Segments, journeys and activation on the golden customer ID	CDP work, proposed separately

Table 20 — Follow-on work.

After handover, the golden record can be run by Komtaş under service C2 Run: match and merge tuning, steward support and queue monitoring, data quality and match quality monitoring, new sources and a monthly report. Run and additional domains are offered in a separate proposal. «DAMALINK DOĞRULASIN»

11. Commercial Terms

11.1 General Terms

- All fees in this proposal are stated in Turkish lira and exclude VAT. Statutory taxes, duties and charges are not included in the fees.
- The proposal is valid until «proposal date + 1 month».
- The fees are valid on condition that the work starts by «price validity date». If the start moves beyond that date for any reason, the fees and pricing terms are reassessed by mutual agreement in the light of the economic and financial conditions at the time of the work.
- The proposal is based on the assessment «A REF» and the assumptions in Section 7.1; if the basis changes materially, the proposal is renewed.
- The fee is calculated per line as set out in Section 9: foundation once and the domain module on the chosen path.
- Licence and infrastructure costs are not part of this proposal unless line O1 is kept.
- The match and merge rules, the survivorship rules and the decisions on merging or separating records remain with «CUSTOMER» (business data owners and data governance); Komtaş implements the decisions recorded in writing. «CUSTOMER» remains the data controller for the personal data processed in the work.
- Payment follows the payment schedule in Section 9. Invoices are payable within «NUMBER» days of the invoice date.
- Scope changes are managed through a written change request; no change is implemented before its impact analysis is approved.
- The parties keep confidential all information they access within the scope of the work. A separate non-disclosure agreement is signed where needed.
- The rights of use of the deliverables, including rule documents, data models, mappings, configurations and documentation, belong to «CUSTOMER»; Komtaş retains its intellectual property rights in its methodology, templates, accelerators and general know-how. The terms of use of the accelerators in Annex 1 are «FIELD».
- This proposal forms an integral annex to the contract to be signed by the parties. In the event of a conflict between the contract and the proposal, the contract prevails.

11.2 Proposal Contact Details

Questions on this proposal and its scope can be addressed to the contacts below.

Area of Responsibility	Full Name	Title	Contact
Commercial	«full name»	«title»	«e-mail / phone»
Technical	«full name»	«title»	«e-mail / phone»

11.3 Proposal Annexes

This proposal is submitted with the following annexes:

- ANNEX-1 — Accelerators
- ANNEX-2 — About Komtaş

ANNEX-1 — Accelerators

The work uses eight accelerators: rule catalogues, rule sets, templates, dictionaries and question sets that shorten the analysis and the implementation. Each accelerator is described below with the place where it is used in this service.

1. Turkish Customer Data Quality Rule Catalogue

Item	Description
Purpose	Check and cleanse Turkish customer data with tested rules instead of writing each rule from the start «DAMALINK DOĞRULASIN»
Content	Rules per field for first name, surname, company title, TCKN and VKN (length, checksum, repeated digits, verification by identity query where available, uniqueness per customer), phones, e-mail, address, city and district, occupation and education. Each rule has a data quality dimension (completeness, validity, accuracy, consistency, uniqueness, timeliness), a cleanse option (cleansing or standardisation), a category (empty, invalid, problematic, unverified, not unique) and a quality code per domain, column and dimension
Use in this service	Foundation: data quality rule catalogue (D3); domain module: cleansing and validation in the load

Table 21 — Turkish Customer Data Quality Rule Catalogue.

2. Match Rule Set for Turkish Customer Data

Item	Description
Purpose	Start the match design from a tested set of deterministic and fuzzy rule combinations for Turkish customer data «DAMALINK DOĞRULASIN»
Content	Combinations of a name score with an identifier, with example thresholds: name and TCKN (score ≥70), name and VKN (≥80), company title and VKN (≥70), name and mobile phone (≥90, or ≥85 with the same date of birth), name and e-mail (≥90, common free e-mail domains excluded). A rule for a changed surname (for example after marriage) uses the first name, the mobile phone or TCKN and the same date of birth (≥80). Negative rules: different filled TCKNs or dates of birth block a match. The thresholds are examples and are tuned on the data of «CUSTOMER»
Use in this service	Domain module: match rules completed and tuned (Sections 3.2 – 3.4, 3.7)

Table 22 — Match Rule Set for Turkish Customer Data.

3. Survivorship Template

Item	Description
Purpose	Decide per field which value survives in the golden record «DAMALINK DOĞRULASIN»
Content	Per field: the most frequent non-blank value, then the most recent update; trust by source or channel where the sources differ in reliability; a worked golden record example built from two sources. It assumes basic cleansing before matching and a limited number of tuning rounds (for example five)
Use in this service	Domain module: survivorship and trust per field (Sections 3.2 – 3.3)

Table 23 — Survivorship Template.

4. Source-to-Target Matrix and Data Model Templates

Item	Description
Purpose	Document every column from the source to the golden record in a known structure «DAMALINK DOĞRULASIN»
Content	Matrix landing → staging → base object with the rule per column (cleansing function, data quality score used by trust); data model document template for domains, entities, relationships and history
Use in this service	P0: data model document and source-to-target matrix (D1)

Table 24 — Source-to-Target Matrix and Data Model Templates.

5. Reference Dictionaries

Item	Description
Purpose	Standardise and validate values against Turkish reference lists «DAMALINK DOĞRULASIN»
Content	City and district, country, occupation, education, noise words and prefixes (for example titles written inside names)
Use in this service	Foundation: dictionaries loaded into the tool (D3)

Table 25 — Reference Dictionaries.

6. Analysis Report Set

Item	Description
Purpose	Show the size of the duplicate problem in figures the business understands «DAMALINK DOĞRULASIN»
Content	Customer counts, active and passive customers, match frequency, unique active and passive customers, cluster report
Use in this service	P3: validation report (D6)

Table 26 — Analysis Report Set.

7. Reference Data Decision Table

Item	Description
Purpose	Decide between a reference data product and an in-house solution on agreed criteria «DAMALINK DOĞRULASIN»
Content	Criteria: ready data model, data quality functions, real-time services, fuzzy search and match, row and column security, steward user interface, hierarchies and crosswalk mappings (the same meaning with different codes in different systems), approval workflow, import and export, history, trust, merge and unmerge, monitoring and alerts. For each criterion the product and the in-house option are compared, with the situations in which each fits
Use in this service	Reference Data module: choice of product or in-house (Section 3.6)

Table 27 — Reference Data Decision Table.

8. Requirement Question Set

Item	Description
Purpose	Collect the facts on which the design depends in a structured way «DAMALINK DOĞRULASIN»
Content	Architecture and data flows; business problems; domains and priority; master tables and columns; incremental changes; volumes, active and passive records, new records per day; technology standards; real-time needs (queries per day, response time, concurrency); cleansing use cases; hierarchies; consuming systems; steward users and approval flow; third-party integrations
Use in this service	P0: confirmation of the requirements before the detailed design

Table 28 — Requirement Question Set.

ANNEX-2 — About Komtaş

> *FILL NOTE — the figures in Table 29 and in the bullets below come from the proposals of 2026. Check them against the current corporate profile before sending.*

Komtaş is an independent information technology company that has specialised in enterprise data management in Türkiye since 1989. More than 35 years of focus on a single field has given it an end-to-end view that follows data from the moment it is created to the moment a decision is taken.

Indicator	Value
Founded	1989 — more than 35 years of continuous data-focused activity
Specialist staff	250+ data engineers, architects, consultants and analysts
Offices	Istanbul, Ankara, Izmir, Dubai
Strategic partnerships	10+ global technology vendors
Focus area	Data governance, data architecture, analytics, artificial intelligence and AI agent based solutions
Positioning	"From Data to Agents" — integrated capability from data to AI agents

Table 29 — Komtaş corporate profile.

Service Capabilities

The service portfolio of Komtaş covers the whole life cycle of a data initiative:

- **Data Governance and Data Management:** data governance maturity assessment, framework and organisation design, policy and process design, data catalogue, business glossary, data quality management, master data management, data privacy and classification.
- **Data Architecture and Engineering:** data warehouse and data lake architectures, lakehouse design, data integration and streaming architectures, cloud and on-premises modernisation.
- **Analytics and Artificial Intelligence:** enterprise reporting, advanced analytics, machine learning models, generative AI applications and AI governance.
- **Managed Services and Support:** P1 / P2 / P3 support for production systems, capacity and performance management, continuous improvement services.
- **Training and Capability Building:** product training, role-based data governance training, train-the-trainer programmes.

Master Data Management Experience

> *FILL NOTE — the references in Table 30 are anonymous. Do not add institution names, system names, contact persons or further result figures without written approval; «YEAR» is filled once the year of the project is confirmed, «RESULT» is deleted if no measured result is approved, and the «REFERENCE PROJECT» row is deleted if there is no further approved reference.*

Master data work in the scope of this package is listed below. Reference calls can be arranged on request, subject to the approval of the institutions concerned. «DIGITALLENCY DOĞRULASIN»

Institution	Work	Measured Result	Year
An insurance group — single customer view	Four group systems brought into one environment; duplicate customers cleaned within and across the group companies; Informatica PowerCenter, Data Quality and MDM	Access to reports reduced from one week to one day	«YEAR»
An e-commerce company — product information management	Product information management (PIM)	«RESULT»	«YEAR»
«REFERENCE PROJECT»	«FIELD»	«RESULT»	«YEAR»

Table 30 — Master data management references (anonymous).

Why Komtaş

- **Focus:** Komtaş has worked only in the data field for more than 35 years, with more than 250 specialists and 4 offices.
- **One foundation, several domains:** data quality rules, dictionaries, standards and the steward process are reused for every further domain.
- **From assessment to run:** assessment, implementation, additional domains and monthly run are provided by the same organisation (Section 10).
