«GROUP COMPANIES»

Master Data Management / Customer 360 · Service C

Multi-domain & Run

Technical and Commercial Proposal

C1 Additional domain: one-time build of further master data domains of «CUSTOMER» on the established foundation. C2 Run: monthly capacity for match and merge tuning, steward support, quality monitoring, new sources and reporting

Proposal No: KOMTAS-«CUSTOMER ABBREVIATION»-MDM-C-«YEAR»-«SEQUENCE»

Proposal Date: «dd Month yyyy»

Validity: «proposal date + 1 month»

VARIABLE GLOSSARY — in this template only the fields inside « » change per customer. All other text is fixed.

Identity: «CUSTOMER» short customer name used in the text · «CUSTOMER NAME» full legal name (cover) · «GROUP COMPANIES» group companies in scope; delete the line for a single company · «CUSTOMER ABBREVIATION» short code in the proposal number · «YEAR» year (proposal number; year of a reference project) · «SEQUENCE» proposal sequence number · «dd Month yyyy» proposal date · «proposal date + 1 month» end of validity · «price validity date» latest start date for which the fees stay valid

Context: «CUSTOMER CONTEXT» one paragraph: sector, group companies, main operational systems holding customer, product or reference data (core, CRM, ERP, channels), data warehouse, current practice for duplicate records, reason for the request · «TRIGGER» reason for the work (e.g. duplicate customers across systems or group companies, KVKK data subject requests, group risk or legal reporting, a CRM or core system renewal, a merger, an omnichannel programme, a CDP project that needs a golden customer ID, an unmanaged product catalogue)

Scope: «PLATFORM» technology option chosen for the work: on-premises Informatica products or Informatica IDMC (cloud); see the technology options table · «BAND» sizing band S, M or L from the proposal input form · «SUPPORT HOURS» support hours (e.g. weekdays 09:00–18:00 Türkiye time)

Modules: «MODULE — CUSTOMER 360» block of the Customer 360 domain module (with the Vehicle variant); delete every block of this module if it is not in scope · «MODULE — PRODUCT 360 / PIM» block of the Product 360 / PIM domain module; delete every block of this module if it is not in scope · «MODULE — REFERENCE DATA» block of the Reference Data domain module; delete every block of this module if it is not in scope

Commercial: «OPTIONAL» item kept or deleted by sales; if kept, delete the marker · «fee» fee excl. VAT · «monthly fee» monthly fee excl. VAT · «day rate» person-day rate (change requests) · «hour rate» hourly rate for work above the monthly capacity · «CITY» city where on-site meetings are free of charge

Values: «NUMBER» numeric value (count, sample size, days, weeks, months, hours) · «%» percentage (payment rate, precision of the cluster review) · «FIELD» free text (e.g. names of source or consuming systems, a product version, a term agreed separately)

Annex: «REFERENCE PROJECT» further reference project approved for this proposal (no names without permission); otherwise delete the row · «RESULT» measured result of a reference project, only if measured and approved for use; otherwise delete the line

Contacts: «full name» contact name · «title» contact title · «e-mail / phone» contact details

Markers: the C1 domain lines are resolved as described in the fill notes on the first page. «OPTIONAL» items are kept or deleted by sales. The orange DAMALINK DOĞRULASIN and DIGITALLENCY DOĞRULASIN tags mark draft statements to be verified before use. FILL NOTE boxes are internal and are deleted before sending.

Contents

FILL NOTE — this template is for service C (Multi-domain & Run) of the Master Data Management / Customer 360 package. It has two lines in the same file: C1 Additional domain, a one-time build at a fixed fee per domain, and C2 Run, a monthly service. If only one line is requested, delete the headings, rows and bullets of the other line.

C1 domains: every heading, paragraph, table row and bullet starting with «MODULE — CUSTOMER 360», «MODULE — PRODUCT 360 / PIM» or «MODULE — REFERENCE DATA» belongs to that domain line. Keep the lines of the domains added in this proposal and delete the others, including the domain already built under service B.

C1 requires a foundation in operation, built under service B or existing at «CUSTOMER». C2 applies to master data management in operation; a solution not built by Komtaş is taken over through the onboarding in Section 4.2.

Technology option: the work is carried out either with on-premises Informatica products or with Informatica IDMC (cloud); the choice is a scope item («PLATFORM», Table 6). Licences are not part of this proposal unless an optional licence line is kept. Product names and versions are confirmed with the licence position of «CUSTOMER» before sending.

Statements followed by an orange tag are draft assumptions of the package and are verified before the template is used. DAMALINK DOĞRULASIN: approach, phases, deliverables, durations, effort, bands and record packs, roles, tools and their IDMC equivalents, data quality, match and merge rule patterns and thresholds, the reference data decision table, accelerators, acceptance criteria. DIGITALLENCY DOĞRULASIN: the insurance group and e-commerce references. After verification only the tag is deleted. No proposal is sent with a tag in it.

Order of completion: «PLATFORM» (Table 6) → C1 domain lines (Table 2) → Table 5 → capacity package (Table 14) → request handling (Table 7) → fees (Section 9) → Annex 2 → remaining « » fields. No commercial figures other than the fees in Section 9 are written into this proposal.

1. Purpose

«CUSTOMER CONTEXT»

The aim of this proposal is twofold. Further master data domains of «CUSTOMER» are built on the foundation in operation, with the relationships between the domains. The quality of the golden records is kept under control as new sources and records arrive. The reason for the work is «TRIGGER».

The proposal has two lines:

- **C1 Additional domain (one-time per domain):** a further domain built on the established hub or consolidation, reusing the foundation, with cross-domain relationships; fixed fee per domain.
- **C2 Run (monthly):** match and merge tuning, steward support and queue monitoring, data quality and match quality monitoring, new sources and a monthly report from a monthly capacity of hours; monthly fee.

2. Scope

2.1 Service Structure

Service	Focus	Result	Pricing
A — MDM Assessment	Profiling and data quality analysis of the master data sources, duplicate analysis, draft match and merge rules, golden record definition, conceptual data model, target architecture, choice of the implementation path and roadmap; 4 to 8 weeks «DAMALINK DOĞRULASIN»	Rule documents, duplicate rate, architecture, roadmap and estimate for B	Fixed fee
B — Domain Foundation	Foundation once and one domain module, on the Consolidation path (batch cleansing, match and merge, golden record table) or on the Hub path (MDM hub with steward workflow and services)	Golden records of one domain, distributed to the agreed systems	Foundation once + domain module fee
C — Multi-domain & Run	C1 Additional domain (one-time per domain) on the same foundation, with cross-domain relationships. C2 Run (monthly): match and merge tuning, steward support, data quality and match quality monitoring, new sources, monthly report	Further domains mastered; quality of the golden records kept under control	C1 fixed fee per domain; C2 monthly fee

Table 1 — Service structure. This proposal covers service C.

2.2 C1 Additional Domain — Scope

Each additional domain is built on the foundation in operation: the tools, the data quality rule catalogue, the reference dictionaries, the standards and the steward process are reused, and only the domain-specific data model, rules, loads and distribution are built. The domain lines in scope are: «DAMALINK DOĞRULASIN»

#	Domain Line	Content	Sources / Records (M)
C1.1	«MODULE — CUSTOMER 360»	Individual and corporate customers within and across group companies; «OPTIONAL» Vehicle variant (vehicle with chassis number, plate, owner and insured relations)	«NUMBER» / «NUMBER»
C1.2	«MODULE — PRODUCT 360 / PIM»	Product–variant model, daily batch delta, enrichment and publication to the channels	«NUMBER» / «NUMBER»
C1.3	«MODULE — REFERENCE DATA»	Code lists, crosswalk mappings across systems, approval workflow	«NUMBER» / «NUMBER»

Table 2 — C1 domain lines. Keep only the lines in scope.

Cross-domain relationships are built where both domains are mastered:

Relationship	Example	In Scope
Customer–product holdings	Products, policies or contracts held by a golden customer	«OPTIONAL»
Household and company group	Customers grouped by family or by company group for group risk	«OPTIONAL»
Customer–institution	Customers related to agencies, branches, employees or suppliers	«OPTIONAL»

Table 3 — Cross-domain relationships.

2.3 C2 Run — Services Included

The monthly service covers the items below. All items are delivered from the monthly capacity of hours in Table 14. «DAMALINK DOĞRULASIN»

#	Service	Content
1	Match and merge tuning	Match rules, thresholds and survivorship adjusted with the written decision of «CUSTOMER»; false merges corrected (unmerge)
2	Steward support and queue monitoring	Questions of the data stewards answered; open match candidates and tasks monitored
3	Quality monitoring	Data quality scores, duplicate rate, match and merge results, steward backlog; jobs and services checked and failures corrected
4	New sources	New source systems or tables of a domain in operation mapped, cleansed and matched
5	Monthly report	Use of the capacity, quality indicators, rule changes, new sources, open items

Table 4 — Services included in the monthly service.

2.4 Sizing Basis

Sizing Input	Value
Domains in operation / added by C1	«NUMBER» / «NUMBER»
Source systems	«NUMBER»
Records (millions)	«NUMBER»
Match rules	«NUMBER»
Consuming systems / integrations	«NUMBER»
Technology option	«PLATFORM»
Sizing band	«BAND»

Table 5 — Values on which sizing is based. Source: the proposal input form.

The band (S / M / L) is the highest band reached by at least three of the drivers: domains (S 1 · M 2 · L ≥3), source systems (S ≤3 · M 4–8 · L >8), records (S ≤10 M · M ≤30 M · L ≤50 M), match rules (S ≤20 · M 21–60 · L >60) and consuming systems (S ≤3 · M 4–8 · L >8). The band sets the C1 effort per domain and the C2 capacity package. «DAMALINK DOĞRULASIN»

2.5 Technology Options

Need	On-premises (Informatica)	IDMC (cloud)
MDM hub	Informatica MDM Multidomain, with the steward user interface (IDD) and the SIF services	MDM SaaS (Customer 360 / Business 360) «DAMALINK DOĞRULASIN»
Product information	Informatica Product 360 (PIM)	Product 360 SaaS
Reference data	Informatica Reference Data Management (RDM) or an in-house solution	Reference 360
Data quality and matching	Informatica Data Quality (IDQ)	Cloud Data Quality
Integration	PowerCenter	Cloud Data Integration
Support status of the on-premises version in use	«FIELD»	—

Table 6 — Technology options. Option chosen: «PLATFORM».

2.6 Boundaries to Other Services

- **Data Governance:** the data steward organisation, data ownership and policies belong to the Data Governance service. This package configures the steward workflow in the MDM tool and sets up the steward process together with the data governance office of «CUSTOMER».
- **Data Quality:** the enterprise data quality programme belongs to the Data Governance service. This package applies data quality rules to the master data in scope.
- **Data Privacy:** masking of personal data in non-production copies of the MDM environment is the subject of the Data Privacy & Test Data (KVKK) service.
- **Source systems:** changes in the source systems are made by «CUSTOMER» or its suppliers; this package defines the interfaces they need.
- **Service B and change requests:** a change of the implementation path, or a requirement larger than the monthly capacity, is offered as a separate proposal (Section 9.5).

MDM and CDP

Master data management provides the operational golden record. Identities are resolved with deterministic and fuzzy rules on identifiers, the surviving value is chosen per field, hierarchies are kept and the result is written back to the operational systems; the owners are data governance and IT. A customer data platform (CDP) serves marketing and activation: behavioural and event data, segments, audiences, journeys and channel activation; the owner is marketing. The two work together: the CDP consumes the golden customer ID and attributes from MDM. MDM does not hold clickstream data and does not orchestrate consent; consent attributes can be mastered in it. CDP work is outside the scope of this proposal.

3. Approach

3.1 C1 Additional Domain — Approach

Each domain follows the same steps as the domain of service B: the sources of the domain are profiled, the data model is extended, the source-to-target matrix and the match and merge rules of the domain are written and approved, loads, cleansing, match and merge are built, the golden records are validated in parallel and distributed. Cross-domain relationships are added to the data model and filled once both domains are mastered. «DAMALINK DOĞRULASIN»

«MODULE — CUSTOMER 360» For a party domain, the rule set for Turkish customer data and the negative rules of the foundation are reused; group companies not yet in scope are added as sources.

«MODULE — PRODUCT 360 / PIM» Product information is kept in the product–variant model and published to the channels; transactional data such as stock and prices remains in the source systems.

«MODULE — REFERENCE DATA» Code lists and crosswalk mappings are kept with an approval workflow; the product or in-house choice follows the reference data decision table (accelerator 7, Annex 1).

3.2 C2 Run — Monthly Cycle

Each month has the same steps:

- **Planning:** at the start of the month, the requests, the planned tuning and the use of the capacity are agreed with the service owner of «CUSTOMER».
- **Delivery:** rule changes, new sources and corrections are carried out and checked.
- **Monitoring:** the quality indicators, the steward queue and the jobs and services are checked and failures corrected.
- **Reporting:** at the end of the month, the monthly report is presented.

3.3 C2 Run — Match Quality and Tuning

Match quality is followed with a small set of indicators: the duplicate rate per source and across sources, the number of automatic and manual merges, the merges reversed by data stewards (unmerge), the open match candidates and their age, and the data quality scores of the golden records. When an indicator moves outside the agreed range, the cause is analysed and a rule or threshold change is proposed. A rule or threshold is changed only with the written decision of «CUSTOMER»; the previous version and the date of the change are kept. «DAMALINK DOĞRULASIN»

3.4 C2 Run — Request Handling

Requests are handled during «SUPPORT HOURS» with the response times below: «DAMALINK DOĞRULASIN»

Priority	Definition	Response Time
High	Distribution of golden records to a consuming system stopped, a real-time service unavailable, or a false merge that affects operational systems	«NUMBER» hours
Normal	Rule changes, new sources, steward questions and improvements	«NUMBER» working days

Table 7 — Request priorities and response times.

4. Activities and Timeline

4.1 C1 Additional Domain — Phases

The phases below are carried out for each domain line in scope.

Phase	Activities	Exit Criterion
P0 Domain design	Profiling of the sources, data model extension, source-to-target matrix, match and merge rules	Design and rules approved in writing «DAMALINK DOĞRULASIN»
P1 Build	Loads, cleansing, match and merge, golden record, cross-domain relationships, distribution	Domain built in the test environment
P2 Validation	Parallel validation of the golden records, cluster reviews, rule tuning, tests	Acceptance criterion of Table 11 met
P3 Go-live and handover	Initial load in production, schedules, documents, training of stewards	Handover approved

Table 8 — C1 phases and exit criteria per domain.

4.2 C2 Run — Onboarding

The monthly service starts with an onboarding of «NUMBER» weeks: review of the data model, rules, jobs, services, steward process and documents in operation, access to the environments, agreement of the quality indicators and of the request process. If the solution was not built by Komtaş, the findings of the review are reported with the actions needed before the service starts. «DAMALINK DOĞRULASIN»

4.3 C2 Run — Monthly Activities and Term

Timing	Activity	Output
Start of month	Monthly planning with the service owner	Agreed list of requests and tuning
During the month	Tuning, steward support, new sources, monitoring	Changes delivered and checked
End of month	Review of the quality indicators, monthly report	Monthly report

Table 9 — C2 monthly cycle.

The monthly service runs for a minimum term of 12 months from the end of the onboarding and is renewed for periods of «NUMBER» months unless terminated with «NUMBER» months' notice. «DAMALINK DOĞRULASIN»

5. Deliverables and Acceptance

5.1 Deliverables

#	Deliverable	Line / Frequency	Content
D1	Domain design	C1, per domain	Data model extension, source-to-target matrix, match and merge rule documents
D2	Golden records of the domain in operation	C1, per domain	Golden records with cross-reference, cross-domain relationships, distribution
D3	Validation report	C1, per domain	Counts, duplicate rates, reviewed clusters, precision
D4	Updated technical document and training	C1, per domain	Operation of the domain, steward tasks
D5	Onboarding report	C2, once	Findings of the review and actions needed
D6	Monthly report	C2, monthly	Content in Table 4, item 5
D7	Change records	C2, per change	Request, rules or thresholds changed, checks, approval

Table 10 — Deliverables.

5.2 Acceptance

Line	Acceptance Criterion
C1 Additional domain	Per domain: golden records produced for the agreed sources; a sample of «NUMBER» clusters reviewed by the data stewards with a precision of at least «%»; steward workflow running; golden records distributed to the agreed consumers «DAMALINK DOĞRULASIN»
C2 Run	Monthly report reviewed; each change accepted after its check, or deemed accepted if no written objection is received within «NUMBER» working days

Table 11 — Acceptance criteria per line.

Each C1 domain is accepted separately; C2 is reviewed every month. Each C1 deliverable is reviewed by «CUSTOMER» within «NUMBER» working days of delivery.

6. Customer Responsibilities

«CUSTOMER» is responsible for the items below.

- Name the business data owners of each additional domain and have its match and merge rules approved within «NUMBER» working days (C1).
- Provide access to the sources of each additional domain and make the changes needed in the source and consuming systems (C1).
- Appoint a service owner as the single point for requests and priorities (C2).
- Keep the agreed capacity of data stewards working on the steward queue (C1 and C2).
- Provide access to the environments and keep the licences of the chosen option («PLATFORM») valid.

7. Assumptions and Out of Scope

7.1 Assumptions

- The C1 effort is based on the values in Tables 2 and 5; a different number of sources or records is handled through a change request.
- Unused hours of C2 are not carried over to the following month. «DAMALINK DOĞRULASIN»
- Work above the monthly capacity is carried out only after written approval and is invoiced at «hour rate» per hour.
- The data model, rules, jobs and services in operation are documented at the start of C2, or are brought up to date in the onboarding.

- The service is delivered remotely with access to the environments of «CUSTOMER»; meetings can be held on site in «CITY».
- The working language and the language of the deliverables is Turkish.

7.2 Out of Scope

The topics below are outside the scope of this proposal. If requested, they are assessed and proposed separately. «DAMALINK DOĞRULASIN»

- CDP, campaign management and channel activation.
- Changes in the source systems.
- Enterprise data quality work outside the master data in scope.
- A change of the implementation path and requirements larger than the monthly capacity (separate proposal).
- Procurement of licences.
- The daily steward work itself, which remains with the data stewards of «CUSTOMER».

8. Team

8.1 Komtaş Team

Role	Responsibility	Participation
Engagement Lead	C1 plan and acceptance; C2 monthly planning, priorities, monthly report	C1 P0 – P3; C2 from the monthly capacity «DAMALINK DOĞRULASIN»
MDM Architect	Domain design, data model extension, rules	C1 P0 – P2
MDM / IDQ Developer	C1 build and tests; C2 tuning, new sources, monitoring	C1 P1 – P3; C2 from the monthly capacity
Data Quality Analyst	Validation of the golden records, quality indicators	C1 P0 – P2; C2 as needed

Table 12 — Komtaş team and roles.

8.2 Governance

- C1: weekly progress meeting until the handover of each domain.
- C2: monthly service meeting on the monthly report and the plan for the next month; quarterly review with the sponsor on the capacity needed.

9. Effort and Fees

> *FILL NOTE — take the band, the C1 effort per domain and the C2 capacity package from the proposal input form (mdm-customer-360-3c-multidomain-run-girdi-formu). Fees are entered by sales. Draft values:*
>
> *C1 Additional domain: about 60–70% of the effort of the same domain under service B (Customer 360 on the Consolidation path S ~60 / M ~100 / L ~140 pd, on the Hub path S ~110 / M ~160 / L ~220 pd; Product 360 / PIM S ~80 / M ~110 / L ~140 pd; Reference Data S ~30 / M ~50 / L ~80 pd). C2 Run monthly capacity: S 40 hours · M 80 hours · L 160 hours; minimum term 12 months.* «DAMALINK DOĞRULASIN»
>
> *The values are not based on recorded effort. Delete this box before sending.*

9.1 C1 Additional Domain — Fees

#	Domain Line	Effort (pd)	Fee (excl. VAT)
C1.1	«MODULE — CUSTOMER 360»	«NUMBER»	«fee»
C1.2	«MODULE — PRODUCT 360 / PIM»	«NUMBER»	«fee»
C1.3	«MODULE — REFERENCE DATA»	«NUMBER»	«fee»
	Total C1	«NUMBER»	«fee»

Table 13 — C1 fees per domain. Band: «BAND». All fees exclude VAT.

9.2 C2 Run — Capacity Packages

Package	Hours per Month	Monthly Fee (excl. VAT)
S — one domain, up to 3 source systems	«NUMBER»	«monthly fee»
M — two domains or 4 to 8 source systems	«NUMBER»	«monthly fee»
L — three or more domains or more than 8 source systems	«NUMBER»	«monthly fee»

Table 14 — Capacity packages. Selected package: «BAND». Keep only the row of the selected package.

9.3 Fees

Line	Item	Basis	Fee (excl. VAT)
C1	Additional domains (Section 9.1)	One-time per domain	«fee»
C2	Onboarding	Once	«fee»
C2	Monthly service, package «BAND»	Per month	«monthly fee»
C2	Work above the monthly capacity	Per hour	«hour rate»

Table 15 — Fees. All fees exclude VAT.

9.4 Payment Schedule

C1: for each domain, «%» of the domain fee at the exit approval of P1 and the remaining «%» at the acceptance in Table 11. C2: the onboarding fee is invoiced at the end of the onboarding; the monthly fee is invoiced at the end of each month together with the monthly report; work above the capacity is invoiced in the month in which it is carried out.

9.5 Larger Changes

A change of the implementation path or a requirement larger than the monthly capacity is offered as a separate proposal on the basis of person-days × day rate («day rate», excl. VAT).

9.6 Not Included in the Fee

- Licence and infrastructure costs of the chosen option («PLATFORM»).
- Work above the monthly capacity unless approved in writing.
- Travel and accommodation outside «CITY».

10. Next Step

The monthly service shows where the master data needs further work. The usual follow-on work is:

Need	Follow-On Work
Further domains	Service C1: additional domains on the same foundation
Steward organisation, ownership, enterprise data quality	Data Governance
Personal data in non-production MDM copies	Data Privacy & Test Data (KVKK)
Segments, journeys and activation on the golden customer ID	CDP work, proposed separately

Table 16 — Follow-on work.

The first step is the signature of this proposal and the start of the first C1 domain and of the C2 onboarding on dates agreed with «CUSTOMER».

11. Commercial Terms

11.1 General Terms

- All fees in this proposal are stated in Turkish lira and exclude VAT. Statutory taxes, duties and charges are not included in the fees.
- The proposal is valid until «proposal date + 1 month».
- The fees are valid on condition that the work starts by «price validity date». If the start moves beyond that date for any reason, the fees and pricing terms are reassessed by mutual agreement in the light of the economic and financial conditions at the time of the work.
- C1 is offered at a fixed fee per domain based on Tables 2 and 5. The C2 monthly fee covers the capacity of the selected package; unused hours are not carried over (Section 7.1).
- The minimum term and the renewal of C2 follow Section 4.3. The package can be changed at the end of each quarter with «NUMBER» days' notice.
- The monthly fee is reviewed once a year on the anniversary of the start of the service, by mutual agreement.
- The match and merge rules, the survivorship rules and the decisions on merging or separating records remain with «CUSTOMER» (business data owners and data governance); Komtaş implements the decisions recorded in writing. «CUSTOMER» remains the data controller for the personal data processed in the work.
- Payment follows the payment schedule in Section 9. Invoices are payable within «NUMBER» days of the invoice date.
- Scope changes are managed through a written change request; no change is implemented before its impact analysis is approved.
- The parties keep confidential all information they access within the scope of the work. A separate non-disclosure agreement is signed where needed.
- The rights of use of the deliverables, including rule documents, data models, mappings, configurations and documentation, belong to «CUSTOMER»; Komtaş retains its intellectual property rights in its methodology, templates, accelerators and general know-how. The terms of use of the accelerators in Annex 1 are «FIELD».
- This proposal forms an integral annex to the contract to be signed by the parties. In the event of a conflict between the contract and the proposal, the contract prevails.

11.2 Proposal Contact Details

Questions on this proposal and its scope can be addressed to the contacts below.

Area of Responsibility	Full Name	Title	Contact
Commercial	«full name»	«title»	«e-mail / phone»
Technical	«full name»	«title»	«e-mail / phone»

11.3 Proposal Annexes

This proposal is submitted with the following annexes:

- ANNEX-1 — Accelerators
- ANNEX-2 — About Komtaş

ANNEX-1 — Accelerators

The work uses eight accelerators: rule catalogues, rule sets, templates, dictionaries and question sets that shorten the analysis and the implementation. Each accelerator is described below with the place where it is used in this service.

1. Turkish Customer Data Quality Rule Catalogue

Item	Description
Purpose	Check and cleanse Turkish customer data with tested rules instead of writing each rule from the start «DAMALINK DOĞRULASIN»
Content	Rules per field for first name, surname, company title, TCKN and VKN (length, checksum, repeated digits, verification by identity query where available, uniqueness per customer), phones, e-mail, address, city and district, occupation and education. Each rule has a data quality dimension (completeness, validity, accuracy, consistency, uniqueness, timeliness), a cleanse option (cleansing or standardisation), a category (empty, invalid, problematic, unverified, not unique) and a quality code per domain, column and dimension
Use in this service	C1: data quality rules of the new domain; C2: rule maintenance

Table 17 — Turkish Customer Data Quality Rule Catalogue.

2. Match Rule Set for Turkish Customer Data

Item	Description
Purpose	Start the match design from a tested set of deterministic and fuzzy rule combinations for Turkish customer data «DAMALINK DOĞRULASIN»
Content	Combinations of a name score with an identifier, with example thresholds: name and TCKN (score ≥70), name and VKN (≥80), company title and VKN (≥70), name and mobile phone (≥90, or ≥85 with the same date of birth), name and e-mail (≥90, common free e-mail domains excluded). A rule for a changed surname (for example after marriage) uses the first name, the mobile phone or TCKN and the same date of birth (≥80). Negative rules: different filled TCKNs or dates of birth block a match. The thresholds are examples and are tuned on the data of «CUSTOMER»
Use in this service	C1: match rules of a party domain; C2: match tuning (Section 3.3)

Table 18 — Match Rule Set for Turkish Customer Data.

3. Survivorship Template

Item	Description
Purpose	Decide per field which value survives in the golden record «DAMALINK DOĞRULASIN»
Content	Per field: the most frequent non-blank value, then the most recent update; trust by source or channel where the sources differ in reliability; a worked golden record example built from two sources. It assumes basic cleansing before matching and a limited number of tuning rounds (for example five)
Use in this service	C1: survivorship of the new domain; C2: survivorship changes

Table 19 — Survivorship Template.

4. Source-to-Target Matrix and Data Model Templates

Item	Description
Purpose	Document every column from the source to the golden record in a known structure «DAMALINK DOĞRULASIN»
Content	Matrix landing → staging → base object with the rule per column (cleansing function, data quality score used by trust); data model document template for domains, entities, relationships and history
Use in this service	C1: data model extension and source-to-target matrix (D1)

Table 20 — Source-to-Target Matrix and Data Model Templates.

5. Reference Dictionaries

Item	Description
Purpose	Standardise and validate values against Turkish reference lists «DAMALINK DOĞRULASIN»
Content	City and district, country, occupation, education, noise words and prefixes (for example titles written inside names)
Use in this service	C1 and C2: dictionaries extended for new sources

Table 21 — Reference Dictionaries.

6. Analysis Report Set

Item	Description
Purpose	Show the size of the duplicate problem in figures the business understands «DAMALINK DOĞRULASIN»
Content	Customer counts, active and passive customers, match frequency, unique active and passive customers, cluster report
Use in this service	C1: validation report (D3); C2: quality indicators in the monthly report

Table 22 — Analysis Report Set.

7. Reference Data Decision Table

Item	Description
Purpose	Decide between a reference data product and an in-house solution on agreed criteria «DAMALINK DOĞRULASIN»
Content	Criteria: ready data model, data quality functions, real-time services, fuzzy search and match, row and column security, steward user interface, hierarchies and crosswalk mappings (the same meaning with different codes in different systems), approval workflow, import and export, history, trust, merge and unmerge, monitoring and alerts. For each criterion the product and the in-house option are compared, with the situations in which each fits
Use in this service	C1: Reference Data domain line (Section 3.1)

Table 23 — Reference Data Decision Table.

8. Requirement Question Set

Item	Description
Purpose	Collect the facts on which the design depends in a structured way «DAMALINK DOĞRULASIN»
Content	Architecture and data flows; business problems; domains and priority; master tables and columns; incremental changes; volumes, active and passive records, new records per day; technology standards; real-time needs (queries per day, response time, concurrency); cleansing use cases; hierarchies; consuming systems; steward users and approval flow; third-party integrations
Use in this service	C1: requirements of each additional domain

Table 24 — Requirement Question Set.

ANNEX-2 — About Komtaş

> *FILL NOTE — the figures in Table 25 and in the bullets below come from the proposals of 2026. Check them against the current corporate profile before sending.*

Komtaş is an independent information technology company that has specialised in enterprise data management in Türkiye since 1989. More than 35 years of focus on a single field has given it an end-to-end view that follows data from the moment it is created to the moment a decision is taken.

Indicator	Value
Founded	1989 — more than 35 years of continuous data-focused activity
Specialist staff	250+ data engineers, architects, consultants and analysts
Offices	Istanbul, Ankara, Izmir, Dubai
Strategic partnerships	10+ global technology vendors

Table 25 — Komtaş corporate profile.

Service Capabilities

The service portfolio of Komtaş covers the whole life cycle of a data initiative:

- **Data Governance and Data Management:** data governance maturity assessment, framework and organisation design, policy and process design, data catalogue, business glossary, data quality management, master data management, data privacy and classification.
- **Data Architecture and Engineering:** data warehouse and data lake architectures, lakehouse design, data integration and streaming architectures, cloud and on-premises modernisation.
- **Analytics and Artificial Intelligence:** enterprise reporting, advanced analytics, machine learning models, generative AI applications and AI governance.
- **Managed Services and Support:** P1 / P2 / P3 support for production systems, capacity and performance management, continuous improvement services.
- **Training and Capability Building:** product training, role-based data governance training, train-the-trainer programmes.

Master Data Management Experience

> *FILL NOTE — the references in Table 26 are anonymous. Do not add institution names, system names, contact persons or further result figures without written approval; «YEAR» is filled once the year of the project is confirmed, «RESULT» is deleted if no measured result is approved, and the «REFERENCE PROJECT» row is deleted if there is no further approved reference.*

Master data work in the scope of this package is listed below. Reference calls can be arranged on request, subject to the approval of the institutions concerned. «DIGITALLENCY DOĞRULASIN»

Institution	Work	Measured Result	Year
An insurance group — single customer view	Four group systems brought into one environment; duplicate customers cleaned within and across the group companies; Informatica PowerCenter, Data Quality and MDM	Access to reports reduced from one week to one day	«YEAR»
An e-commerce company — product information management	Product information management (PIM)	«RESULT»	«YEAR»
«REFERENCE PROJECT»	«FIELD»	«RESULT»	«YEAR»

Table 26 — Master data management references (anonymous).

Why Komtaş

- **Focus:** Komtaş has worked only in the data field for more than 35 years, with more than 250 specialists and 4 offices.
- **Continuity:** assessment, implementation, additional domains and monthly run are provided by the same organisation (Section 10).
