MASTER DATA MANAGEMENT / CUSTOMER 360 — INFORMATION GATHERING FORM

Information needed to determine the service to be proposed, its scope and duration. Numerical answers may be given as approximate values. The SERVICE column shows which service the question is required for (A · MDM Assessment, B · Domain Foundation, C · Multi-domain and Run).

#	SECTION	SERVICE	QUESTION	ANSWER	ADDITIONAL NOTES
1	Scope and Expectations	A · B · C	What need has started this work (the same customer held as different records in different systems, the need for a single customer view, a CRM or CDP project, regulatory reporting, a system transformation, etc.)? Which decision is expected to be made, when and by whom?		
2	Scope and Expectations	A · B	What master data problems occur most often today (duplicate records, missing or wrong contact details, inconsistent codes across systems, customer or product counts that differ from report to report, etc.)? Are the business effects of these problems known?		
3	Scope and Expectations	A · B · C	Which domain has priority (customer / party, product, supplier, location, reference data, etc.)? Which domains are expected to be brought into scope in later stages?		
4	Scope and Expectations	A · B	Which outcome is closest to what is expected from the work: a measurement of the current state and data quality with a roadmap; a direct implementation for a given domain; a review of an existing MDM installation?		
5	Scope and Expectations	A · B · C	Who is the business sponsor of the work, and which unit owns the master data? Which legal entities, business units and countries are expected to be in scope?		
6	Environment and Source Systems	A · B	In which source systems is master data created and updated (core system, ERP, CRM, e-commerce, call centre, field sales, etc.)? Approximately how many source systems are there?		
7	Environment and Source Systems	A · B	What does the data flow architecture look like in outline (operational systems, ESB or API layer, ODS or staging, data warehouse, reporting)? Can a document showing the architecture be shared?		
8	Environment and Source Systems	A · B	What are the organisation's technology standards (database, operating system, application server, cloud usage policy)?		
9	Environment and Source Systems	A	How can the source data be accessed for profiling and duplicate record analysis in the assessment (read-only access in the organisation's environment, masked sample data, etc.)? What approval process does this access need?		
10	Data and Volumes	A · B · C	What are the approximate total and active record counts for the priority domain (e.g. total and active customers)? How are active and passive records defined?		
11	Data and Volumes	A · B	How are individual and corporate customers told apart? Are there records of customers resident abroad or of foreign nationals?		
12	Data and Volumes	A · B	In how many tables is the in-scope master data held (customer, contact, address, demographic, channel, reference tables, etc.)? Approximately how many columns?		
13	Data and Volumes	B · C	Approximately how many new and changed records are there per day? How can changes be taken from the source systems (full load, delta, change data capture)?		
14	Data and Volumes	A · B	Are only active records, or all records, expected to be managed? Is history required?		
15	Matching and Quality	A · B	Is duplicate detection or deduplication done today? If so, with which rules and in which system?		
16	Matching and Quality	A · B	What data quality problems are known (blank or wrong identity numbers, non-standard addresses, invalid phone numbers or e-mails, etc.)? Is there a measured data quality report?		
17	Matching and Quality	A · B	Is anything known about the completeness and reliability of the identity and contact fields (Turkish ID number, tax number, passport number, mobile phone, e-mail, date of birth)?		
18	Matching and Quality	A · B	When the same information is held in more than one system, which system is considered more reliable (e.g. the core system for identity details, the CRM for contact details)?		

#	SECTION	SERVICE	QUESTION	ANSWER	ADDITIONAL NOTES
19	Matching and Quality	A · B · C	Is there a need for hierarchies and relationships (customer–company, household, group company, product–variant, etc.)?		
20	Consumers and Integration	B · C	Which systems will use the golden record (operational systems, CRM, CDP, data warehouse, reporting)? Is batch or real-time needed for each?		
21	Consumers and Integration	B · C	If real-time is needed, what are the approximate number of queries per day, the expected response time and the number of concurrent users?		
22	Consumers and Integration	B · C	Who will see and use the golden record results? Is an approval flow and a steward screen expected for merging or splitting records; approximately how many users will there be?		
23	Platform and Licences	A · B	Does the organisation hold licences for MDM, data quality or data integration products (Informatica, SAP MDG, another product, or none)? What are their versions and licence renewal dates?		
24	Platform and Licences	A · B	Is the target solution preferred on-premise or in the cloud (a SaaS service such as IDMC)? Is there a constraint that determines this preference?		
25	Governance and Regulation	A · B · C	Are data owner and data steward roles defined? Is there a written process for creating and changing master data?		
26	Governance and Regulation	A · B · C	As master data holds personal data, is there a classification, masking and access policy under KVKK? Is the organisation subject to the rules of BDDK or a similar regulator?		

INFORMATION NOTE

Purpose of the form	This form has been prepared to collect the information needed to select the service to be proposed under Master Data Management / Customer 360 and to determine the scope, duration and team composition of the work.
Three services	A — MDM Assessment: profiling and data quality analysis of the source data; duplicate record analysis and a draft of match rules; merge and survivorship rules; a conceptual data model; target architecture, implementation path and roadmap. Fixed price. B — Domain Foundation: the master data foundation for one domain. There are two implementation paths: Consolidation (a deduplicated central record built from the sources) or Hub (an MDM hub where the golden record is managed together with the source systems). Domain modules: Customer 360, Product 360 / PIM, Reference Data. C — Multi-domain and Run: additional domains and the monthly operation of the installed solution (match tuning, steward support, monitoring). B is proposed on the basis of the outputs of A or an equivalent analysis.
Which question for which service	The SERVICE column shows which service the question is required for. If the service has not yet been decided, answering all questions is recommended. For A: 1–12, 14–19, 23–26 For B: 1–8, 10–26 For C: 1, 3, 5, 10, 13, 19–22, 25, 26
Nature of the answers	Numerical answers may be given as approximate values; exact figures are not required. Questions whose answer is not known may be left blank.
Volume questions	Questions 6, 10, 12 and 13 carry the main information that sets the size of the work (numbers of source systems, records, tables and daily changes). Approximate values are enough.
System access	A: Profiling and duplicate record analysis are carried out on the source data. The data is examined in the organisation's environment with read-only access, or as masked sample data, in line with the organisation's security policy; personal data does not need to leave the organisation. B and C: Access to the environments and the source data is defined in the project plan with the organisation's approval.
Regulatory question	Question 26 is asked to determine where personal data classification and regulatory obligations call for access policies, masking and additional controls. Part of the answer may sit with units outside technology (legal, compliance, data protection officer).
Questions left blank	Each unanswered topic is stated in the proposal as an assumption. If the assumption does not hold, the scope and duration are reassessed.
Not asked in this form	The content of the match and merge rules, the survivorship rules, the data model, the choice of implementation path, the technology mapping and the methodology are not asked in this form. Komtaş proposes them based on the answers, presents them in the proposal, and they are finalised together in the Assessment.
Confidentiality	The information shared is used only for preparing the proposal and is not shared with third parties.
