PREDICTIVE ANALYTICS · TIER A · INTERNAL

Predictive Analytics Pilot — Proposal Input Form

Information to be collected for the fixed-fee Pilot (A) that builds one use case from one of the five use-case families (Retention & Churn, Demand & Supply, Pricing & Personalization, Risk & Collections, Industrial Operations) on the customer's data and measures its value. Sections follow the Proposal Set codes (P1–P4, P7). Once the form is completed and returned, the proposal text (file 4a) is produced. Orange tags mark drafts: statements with the AX tag are to be verified by the Analytics (AX) team (use cases, data, metrics, effort, bands, team, references, acceptance), statements with the GÜNER tag by Güner Hacıoğlu (cloud / platform items, the MACFit and DeFacto references).

Rows marked ● are BLOCKERS — the proposal cannot be written without them and they cannot be filled with assumptions.

If rows marked ○ remain missing, they are written into the proposal as assumptions and go to the Assumptions and Out of Scope section.

The "WHERE IT FILLS IN THE PROPOSAL" column of each row names the section or variable field of the proposal template (file 4a). This form uses the Proposal Set codes P1–P4, P7; the A·B·C mark in each code heading shows the tiers in which the code is asked.

If the answer to a question is "we don't know", that is also an answer — it is often the first finding and goes into the proposal as an assumption.

LIMIT OF TIER A: the Pilot builds and validates ONE use case from one of the five catalogue families on the customer's data; it has a fixed fee. No production deployment and no integration into business systems — these are Tier B. The result of A is the go / no-go decision and the Production plan and estimate.

PHASES (6–8 weeks): P0 kick-off and data access · P1 data readiness check (history, quality, label) · P2 feature set and model · P3 validation, business value test design and first measurement · P4 results and go / no-go decision for Production. DELIVERABLES: data readiness report; model and feature definitions; validation report; value measurement plan and first results; Production plan and estimate. «AX DOĞRULASIN»

PLATFORM: the delivery platform can be Google Cloud (BigQuery, BigQuery ML, Vertex AI), Dataiku, Azure ML or an open-source stack. The lifecycle and the tiers do not change with the platform; the platform choice is a scope item («PLATFORM»).

OUT OF SCOPE: data platform migration; data cleansing in source systems; execution of campaigns, price changes or operational actions; a guaranteed business result; real-time (online) scoring unless specified. «AX DOĞRULASIN»

NEIGHBOURING PACKAGES AND SEPARATE ASSETS: AI Readiness Assessment measures readiness, this package builds the model; ETL Modernization on Google Cloud and Data Modernization move the data platform; AI Governance Readiness covers model governance. The Analytic CoE Enablement Program, the MLOps / AI Factory platform and the analytics platform migration to Dataiku (SAS / R → Dataiku, Pentaho → Dataiku) are separate candidate assets; RAG / LLM work belongs to Gemini Agent Kit / Grounded Intelligence.

P1 · A·B·C · IDENTITY — Organisation and Proposal Details

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Full legal name of the organisation and the short name used in the text; single company or group with subsidiaries**	Cover «CUSTOMER NAME», text «CUSTOMER»	
○	Legal entities, brands, plants or group companies in scope — names; for a single company the row is deleted	Cover «GROUP COMPANIES», Scope	
○	Sector and reason for the request — for the one-paragraph context	Purpose «CUSTOMER CONTEXT»	
○	Is there an RFP, specification or requirements list; its number, response format and deadline	Structure and response format of the proposal	
○	Proposal addressee — name, title, unit; proposal date and expected decision date	Cover «dd Month yyyy», Commercial Terms «proposal date + 1 month»	
○	Procurement process, approved budget and expected invoice payment term	Effort and Fees, Commercial Terms «NUMBER» days payment term	
○	If the platform is Google Cloud, where is cloud consumption (BigQuery, Vertex AI) bought today — directly, through Komtaş, through another partner or reseller; is there a Dataiku or Azure licence	internal: Commercial frame	
○	Are there competitors, and who (another partner, a software product, the customer's own data science team)	Emphasis and section weights	

P2 · A·B·C · DECISION — Use Case, Business Goal, Platform, Tier and Sponsor

> The value of the package lies in a model the business acts on. If the business goal and the business owner are unknown, the value measurement (control group) cannot be designed and the model remains a technical output.

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Use-case family and use case — from the Use-Case Catalogue below (only one use case in the Pilot)**	ANNEX-1 — Family Pages (selected family block), Scope «USE CASE»	
●	**Business goal and trigger — rising churn or segment downgrade, stock-outs or overstock, price and margin pressure, rising delinquency or a low credit approval rate, energy cost, quality losses or falling yield, campaign efficiency, a move of the data to a new platform «AX DOĞRULASIN»**	Purpose «CUSTOMER CONTEXT» · «TRIGGER»	
○	Business owner and sponsor — marketing, sales, pricing, risk / collections, supply chain or production; who makes the go / no-go decision	Team, Customer Responsibilities, Go / No-Go Decision	
○	Which tiers are wanted — A only; is there interest in B (Production) and C (Run) after A	Next Step, Service Selection Check	
○	Use of the predictions after the Pilot — how often (monthly / weekly / daily / intra-day) and into which system (CRM, campaign tool, pricing system, collections system, ERP / replenishment, MES / SCADA); for the Production plan	Drivers 3–4, Next Step	
○	Delivery platform — Google Cloud (BigQuery, BigQuery ML, Vertex AI), Dataiku, Azure ML or an open-source stack; existing environment, licences and the customer's platform preference	Scope «PLATFORM», Approach	
○	Who will make the decision, and by what date; target start date	Activities and Timeline, Commercial Terms	
○	Has there been an earlier model or analytics study, or an AI Readiness Assessment; what was the outcome	Approach, Assumptions and Out of Scope	

Use-Case Catalogue — Five Families

The unit sold is one use case: Pilot one use case, Production per use case, Run monthly. The family sets the block that stays in ANNEX-1 of the proposal. The catalogue is compiled from the frameworks in the AX deck (table as a whole). «AX DOĞRULASIN»

#	FAMILY (PROPOSAL BLOCK)	USE CASES	SECTOR AND ENTRY VIEW
1	Retention & Churn («FAMILY — RETENTION & CHURN»)	Path to Churn; identifying "balance" churners; asset churn / segment downgrade (bank); subscription churn (fitness / subscription); customer satisfaction index	Finance — Retention; fitness / subscription; retail
2	Demand & Supply («FAMILY — DEMAND & SUPPLY»)	Demand forecasting (retail, manufacturing); inventory productivity; visitor and sales prediction (shopping malls); schedule optimization	Retail; manufacturing — Supply Chain; shopping mall management
3	Pricing & Personalization («FAMILY — PRICING & PERSONALIZATION»)	Next best offer; product bundling; recommendation; customer lifetime value; deposit pricing; credit pricing; list price and markdown optimization; dynamic pricing; customer segmentation; customer contact policy; onboarding analytics	Finance — Acquisition & Onboarding, Growth, Pricing & Personalization; retail; e-commerce; B2B spare parts
4	Risk & Collections («FAMILY — RISK & COLLECTIONS»)	Collection analytics / optimization; credit risk model enhancement (incl. graph analytics on relational data); dynamic client limit; risk analytics	Finance — Risk

#	FAMILY (PROPOSAL BLOCK)	USE CASES	SECTOR AND ENTRY VIEW
5	Industrial Operations («FAMILY — INDUSTRIAL OPERATIONS»)	Energy optimization (HVAC, furnace); predictive quality / quality classification; production yield optimization; predictive maintenance; process unit prediction (refinery); fixed asset utilization — largely ML-guided optimization	Manufacturing — Resource Management, Operational Excellence; pharmaceuticals; refining. References mostly in glass manufacturing; further sectors on request.

P3 · A·B · DATA — Data Sources, History, Platform and Data Owner

> The P1 data readiness check measures history, quality and label; the answers in this section are statements. The minimum data per family is in the Family Data Checklist that follows this section; only the table of the selected family is filled in.

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Data sources for the selected use case — systems (CRM, core banking, membership, POS, e-commerce, ERP, MES / SCADA, IoT platform, laboratory etc.) and their number**	Driver 1, Scope	
●	**How many months of history are available — compared with the minimum in the Family Data Checklist below**	Assumptions and Out of Scope, Blocker Checklist	
○	Where does the data sit today and on which platform (BigQuery, on-prem DWH, ODI / ETL, Dataiku, IoT platform, files)	Approach, Next Step — data platform	
○	Data owner and who provides the extracts / access	Customer Responsibilities	
○	Where the Pilot runs — in the customer's environment on the selected platform («PLATFORM») with access for Komtaş, or in another environment; lead time of the access approval	Pilot Environment, Activities and Timeline, Customer Responsibilities	
●	**Is there KVKK approval or a legal basis for using personal (customer-level) data for modelling; is anonymisation / pseudonymisation required; "not applicable" if only machine / sensor data is used**	Customer Responsibilities, Assumptions and Out of Scope	
●	**Target definition (label) — e.g. membership not renewed within «NUMBER» days, segment downgrade, delinquency within the next T days, defect classes; for forecasts the series level and horizon**	ANNEX-1 — Family Pages (selected family block), Assumptions and Out of Scope	
○	Known data quality issues — missing periods, system changes, unrecorded stock-outs, sensor gaps, manually kept laboratory records	Data Readiness Check, Assumptions and Out of Scope	

Family Data Checklist — Tier A

Only the table of the selected family is filled in; the other tables stay empty. A row that does not meet the minimum is carried to the Blocker Checklist. The data items and minimum periods are drafts for all five tables. **«AX DOĞRULASIN»**

Retention & Churn («FAMILY — RETENTION & CHURN»)

#	DATA ITEM	MINIMUM	AVAILABLE (YES / NO / PARTIAL)	MONTHS / SOURCE SYSTEM	NOTE
1	Customer master data and segment history	12–24 months			
2	Products, accounts, membership or contract — start, end, renewal, balance	12–24 months			
3	Transactions, usage and visits	12–24 months			
4	Campaigns, contacts, complaint and support records	12–24 months			
5	Churn / segment downgrade label	agreed definition			

Demand & Supply («FAMILY — DEMAND & SUPPLY»)

#	DATA ITEM	MINIMUM	AVAILABLE (YES / NO / PARTIAL)	MONTHS / SOURCE SYSTEM	NOTE
1	Sales — at product–location–day / week level	2–3 years			
2	Price, promotion and stock / stock-out records	2–3 years			
3	Calendar, holidays and special days	2–3 years			
4	External data — weather, inflation, macro indices, card spending	2–3 years			
5	Location / store attributes; visitor counts for malls	current			

Pricing & Personalization («FAMILY — PRICING & PERSONALIZATION»)

#	DATA ITEM	MINIMUM	AVAILABLE (YES / NO / PARTIAL)	MONTHS / SOURCE SYSTEM	NOTE
1	Transactions — price paid, discounts, negotiation / markdown history	12–24 months			
2	Price lists and product hierarchy	12–24 months			
3	Customer and product segments; product catalogue and attributes	current			
4	Offer and campaign responses	12–24 months			
5	Interactions — views, baskets (for recommendation)	6–12 months			

Risk & Collections («FAMILY — RISK & COLLECTIONS»)

#	DATA ITEM	MINIMUM	AVAILABLE (YES / NO / PARTIAL)	MONTHS / SOURCE SYSTEM	NOTE
1	Credit customer and product data; application and bureau data	24 months			
2	Repayment performance and delinquency history	24 months			
3	Collection actions and contacts (call centre, IVR, SMS / push) and outcomes	12–24 months			
4	Relational data — payments, transfers, partnerships, guarantorship (for graph analytics)	12–24 months			
5	Delinquency / default label (next T days)	agreed definition			

Industrial Operations («FAMILY — INDUSTRIAL OPERATIONS»)

#	DATA ITEM	MINIMUM	AVAILABLE (YES / NO / PARTIAL)	MONTHS / SOURCE SYSTEM	NOTE
1	Sensor / IoT time series — temperature, humidity, energy, current	6–12 months			
2	Controllable set points and operating parameters	6–12 months			
3	Laboratory and quality samples; defect records	6–12 months			
4	Production / batch records and yield	6–12 months			
5	Maintenance and failure records; ambient conditions	6–12 months			

P4 · A·B · VOLUME — Customers, Series, Products and Sensors

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Volume of the selected use case — number of customers / accounts (Retention, Risk); number of time series, product × location (Demand); SKU × customer segment or number of users and products (Pricing); number of units / sensor tags (Industrial)**	Driver 2, Scope	
○	Demand & Supply: number of products, locations and channels; forecast level (day / week) and horizon («HORIZON»)	ANNEX-1 — Family Pages «FAMILY — DEMAND & SUPPLY», Scope	
○	Pricing & Personalization: number of SKUs, price lists or offers; the channel where the recommendation / offer is shown (web, app, e-mail, branch, store, sales team)	ANNEX-1 — Family Pages «FAMILY — PRICING & PERSONALIZATION», Scope	
○	Industrial Operations: number of plants, lines / units and sensor tags; data frequency (second / minute / hour)	ANNEX-1 — Family Pages «FAMILY — INDUSTRIAL OPERATIONS», Scope	
○	Segments, brands, regions, channels or plants to be modelled separately	Scope, Assumptions and Out of Scope	

P7 · A·B · MEASUREMENT — Success Metric, Control Group and Current Method

Value measurement: the holdout / control group design is agreed with the customer in the Pilot; measurement period «NUMBER» weeks. The results in the AX references were measured this way (test and control group, test units, A/B scenarios).

Acceptance: the technical metric on hold-out data (thresholds «NUMBER») is separate from the business metric; the business metric is measured, not guaranteed. «AX DOĞRULASIN»

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Success metric — technical metric (hold-out) and business metric; for the selected family from the table below**	Value Measurement, Deliverables and Acceptance	
●	**Is a control group possible — can the business hold a group of customers, stores, units or time periods out of the action (campaign test, A/B test, test and control units / periods)**	Value Measurement, Blocker Checklist	
○	Current method — how the business predicts or decides today (rules, Excel, ERP forecast, existing scorecard, operator experience, none); the baseline for the back-test	Value Measurement, Approach	
○	Who acts on the scores during the measurement — campaign team, pricing, collections team, planners, operators	Customer Responsibilities	
○	Measurement period «NUMBER» weeks — fit with the business calendar	Value Measurement, Activities and Timeline	
○	Go / no-go threshold «NUMBER» — who sets and who approves the threshold	Go / No-Go Decision, Deliverables and Acceptance	

Metrics per family — thresholds are agreed with the customer. The metrics are derived from the measurements in the AX references (table as a whole). «AX DOĞRULASIN»

#	FAMILY	TECHNICAL METRIC (HOLD-OUT)	BUSINESS METRIC (CONTROL GROUP / TEST)	THRESHOLD	NOTE
1	Retention & Churn	AUC / Gini; lift in the top decile	Retention difference or segment downgrade difference vs the control group	«NUMBER»	
2	Demand & Supply	WAPE / MAPE and bias vs the current method on a back-test period	Stock holding cost, stock-out / overstock change	«NUMBER»	

#	FAMILY	TECHNICAL METRIC (HOLD-OUT)	BUSINESS METRIC (CONTROL GROUP / TEST)	THRESHOLD	NOTE
3	Pricing & Personalization	Price elasticity model fit; offline precision@k / recall@k	Revenue or margin at the same conversion in an A/B test; CTR and conversion	«NUMBER»	
4	Risk & Collections	Gini; feature importance (explainable AI)	Transition rate into the first delinquency cycle; credit approval rate at the same NPL ratio	«NUMBER»	
5	Industrial Operations	Prediction error on hold-out (MAE / RMSE); classification accuracy	Energy consumption, deviation, yield or labour hours in test units / periods vs control	«NUMBER»	

Band Estimate — Tier A

Completed after the answers are collected. The band sets the duration and effort of the Pilot. The band is the highest band reached by at least three drivers; the use-case driver is not counted in A (the Pilot has one use case). A driver reaches a band when its value falls in that band or a higher one; if three drivers do not reach M or L, the band is S. In Industrial Operations volume is measured by the number of sensor tags; thresholds «NUMBER». «AX DOĞRULASIN»

DRAFT — no recorded effort; bands and efforts are to be updated with the Analytics (AX) team's data. The effort of the AX references and of the MACFit / DeFacto work is unknown. Komtaş effort is not written into the proposal before the delivery team confirms it.

#	DRIVER	SMALL	MEDIUM	LARGE	RESULTING BAND
1	Data sources (P3)	≤ 3	4 – 8	> 8	
2	Volume: customers / time series (P4)	≤ 100k / ≤ 10k	100k – 1M / 10k – 100k	> 1M / > 100k	
3	Prediction frequency (P2)	monthly	weekly	daily / intra-day	
4	Systems to integrate (P2)	1	2 – 3	> 3	
	RESULT — selected band, duration and effort «AX DOĞRULASIN»	6 weeks · ~45 pd	7 weeks · ~60 pd	8 weeks · ~75 pd	

CUSTOMER EFFORT — «NUMBER» days in total for the data owner, business owner and IT (data access and extracts, label definition, results meetings). This expectation is stated explicitly in the Customer Responsibilities section of the proposal. «AX DOĞRULASIN»

TEAM — Data Scientist (lead) · ML Engineer · Data Engineer · Business Analyst / Engagement Lead (part time). Customer side: business owner (marketing, pricing, risk / collections, supply chain or production), data owner, IT / OT for integration. «AX DOĞRULASIN»

ARCHITECTURE — Google Cloud: sources → BigQuery → BigQuery ML or Vertex AI (training, model registry, pipelines, batch prediction) → score / forecast tables → export to business systems → monitoring (drift, performance) → Looker reports. «GÜNER DOĞRULASIN» On the other platforms the same steps are built with Dataiku (flow, model training, deployment, monitoring), Azure ML or an open-source stack (e.g. MLflow, Airflow). «AX DOĞRULASIN»

Fields Filled by the Proposal Team

These fields are not asked of the customer; SAT and sales fill them from the band, the effort calculation, the payment pattern and approved lists.

#	FIELD	WHERE IN THE PROPOSAL	HOW IT IS SET	VALUE
1	KOMTAS-«CUSTOMER ABBREVIATION»-PRA-A-«YEAR»-«SEQUENCE»	Cover — proposal number	Proposal register sequence	
2	«dd Month yyyy» · «proposal date + 1 month» · «price validity date»	Cover, Commercial Terms	Send date + 1 month (P1); sales sets the price validity date	
3	«CUSTOMER CONTEXT» · «TRIGGER»	Purpose	P1 and P2 answers	

#	FIELD	WHERE IN THE PROPOSAL	HOW IT IS SET	VALUE
4	«FAMILY — RETENTION & CHURN» / «FAMILY — DEMAND & SUPPLY» / «FAMILY — PRICING & PERSONALIZATION» / «FAMILY — RISK & COLLECTIONS» / «FAMILY — INDUSTRIAL OPERATIONS»	ANNEX-1 — Family Pages, Scope	P2 — the family block of the one selected use case stays, the other four blocks are deleted	
5	«USE CASE» · «PLATFORM»	Scope, Approach	P2 — name as in the Use-Case Catalogue; platform from the P2 answer	
6	«NUMBER» data sources · «NUMBER» months of history · «NUMBER» customers / series · «HORIZON»	Scope	P3 and P4 answers	
7	«NUMBER» weeks measurement · go / no-go threshold «NUMBER» · metric thresholds «NUMBER»	Value Measurement, Go / No-Go Decision, Deliverables and Acceptance	P7 answers and the metric table	
8	«BAND» · «NUMBER» weeks · «NUMBER» person-days	Activities and Timeline, Effort and Fees	Band estimate, delivery team confirmation	
9	«fee» (fixed) · «day rate» · «%» · «amount»	Effort and Fees, Commercial Terms	Fixed fee = band effort × day rate; change requests at the «day rate»; sales sets the payment pattern («%» · «amount»)	
10	Next step items	Next Step	Follow-on Interest table; no margin figures	
11	ANNEX-2 references table · «RESULT»	ANNEX-2 — About Komtaş	From the References and Results table below, the rows that fit the selected family; the naming and result rule is in the note of the table.	
12	«full name» · «title» · «e-mail / phone» · «CITY»	Commercial Terms	Komtaş commercial and technical contact; city for free on-site meetings	

References and Results — Source of ANNEX-2

Source: the AX “References & Services 2026” deck; rows 10–11 from Güner Hacıoğlu. Results are written only from this table; where no result is known, «RESULT» stays. “Named” rows may appear as references in customer files; each reference table / list in a customer file carries one AX verification tag. **«AX DOĞRULASIN»**

#	USE CASE	FAMILY	REFERENCE (INTERNAL)	MEASURED RESULT	IN THE PROPOSAL
1	Collection optimization	Risk & Collections	Albaraka Banking Group, TEB	3–7% reduction in transition into the first delinquency cycle; Gini 0.86; explainable AI; contact policy optimised	named
2	Credit risk model enhancement	Risk & Collections	QNB Finansbank	+4.5% credit approval rate at the same NPL ratio; Gini 0.78–0.81; graph analytics	named
3	Asset churn prediction	Retention & Churn	Odeabank	11% lower segment downgrade in the test group vs the control group	named
4	Energy optimization in HVAC	Industrial Operations	Eczacıbaşı Monrol	2.3% lower energy consumption in test units vs control	named
5	Furnace energy, furnace temperature control, glass quality classification, production yield	Industrial Operations	Şişecam	«RESULT»	named
6	List price and markdown optimization	Pricing & Personalization	a spare-parts seller	+4% revenue at the same conversion in the test group; price elasticity for 30,000+ SKUs; 12 A/B scenarios	unnamed
7	Demand prediction	Demand & Supply	a tyre manufacturer	7% lower stock holding cost for 7 tyre types	unnamed

#	USE CASE	FAMILY	REFERENCE (INTERNAL)	MEASURED RESULT	IN THE PROPOSAL
8	Visitor and sales prediction	Demand & Supply	a shopping mall management company	Forecasts for 350+ stores in 2 malls and 1.6 million visitors	unnamed
9	Process unit prediction (CCR)	Industrial Operations	an integrated oil / petrochemical group	Qualitative (more stable, less error-prone operation)	unnamed
10	Subscription churn	Retention & Churn	MACFit	«RESULT»; POC or live unknown	anonymous
11	Demand forecasting (retail)	Demand & Supply	DeFacto	«RESULT»; POC or live unknown	anonymous
12	Recommendation	Pricing & Personalization	none	—	—

"Unnamed" rows stay unnamed as in the deck. MACFit and DeFacto are written anonymously in customer files ("a fitness / subscription company", "a retail company"). «GÜNER DOĞRULASIN»

Service Selection Check

Before filling in the form, make sure that Tier A is the right service. One request can match more than one row.

STATUS	RIGHT SERVICE
It is unclear whether the data is ready for a model; readiness is to be measured first	AI Readiness Assessment
The value of a model for one catalogue use case is to be shown on the customer's data	A — Pilot
A validated model from the Pilot or an equivalent study exists; production is wanted	B — Production
The model is in production; monitoring, retraining and a monthly report are wanted	C — Run
Another use case is wanted in addition to a use case with a completed Pilot	A — Pilot for the new use case; B if it is validated
The data sits in on-prem ETL (e.g. ODI) or a DWH; it needs to move to a new platform	ETL Modernization on Google Cloud / Data Modernization
The organisation's analytics team, use-case roadmap and governance are to be set up together	Analytic CoE Enablement Program (separate asset)
An enterprise MLOps / AI Factory platform for many models is wanted	MLOps / AI Factory platform (separate asset)
Existing SAS / R models or Pentaho ETLs are to be moved to Dataiku	Analytics platform migration to Dataiku (separate asset)
The request is a generative AI agent, assistant or RAG / LLM	Gemini Agent Kit / Grounded Intelligence
The request is model governance, risk classification, policy	AI Governance Readiness
The customer wants a guaranteed business result or real-time scoring	No guarantee is given; real-time is clarified separately

Follow-on Interest

Follow-on work the customer may be interested in; feeds the Next Step section of the proposal. No margin figures appear in the proposal.

#	FOLLOW-ON WORK	RELATED TRIGGER	INTEREST (YES / NO / LATER)	NOTE
1	B — Production (Pilot use case)	Go decision		
2	C — Run	Operation of the models in production		
3	Additional use case — from the same or another family	Other business questions — the five catalogue families		

#	FOLLOW-ON WORK	RELATED TRIGGER	INTEREST (YES / NO / LATER)	NOTE
4	Data platform modernisation (ODI → GCP style) — ETL Modernization on Google Cloud, Data Modernization	Data in on-prem ETL / DWH		
5	MLOps / AI Factory platform; Analytic CoE Enablement Program (separate assets)	Number of models is growing; the organisation wants to build its own analytics team		
6	AI Governance Readiness	Governance of models in production		
7	Cloud consumption — BigQuery, Vertex AI on Google Cloud (through Komtaş)	Training and scoring workloads		

COMMERCIAL FRAME — INTERNAL ONLY. This box, its rates and the customer names in it are not written into the customer deck or the proposal.

The Google consumption margin is thin: Premier base 12%, 13–15% with incentives, ~5–6% in large deals; Azure 3%. Value comes from the use cases and C Run (recurring revenue). On Google Cloud the work also drives BigQuery / Vertex AI consumption and opens data platform work.

Evidence: the Analytics (AX) team's "References & Services 2026" deck — references with measured results (Albaraka, TEB, QNB Finansbank, Odeabank, Eczacıbaşı Monrol) and references without a known result (Şişecam). Whether the MACFit (subscription churn) and DeFacto (retail demand forecasting) work brought by Güner Hacıoğlu was POC or live, and its results, are unknown; these two customers stay anonymous in the proposal and the deck. There is no field reference for recommendation. Industrial Operations references are mostly in glass manufacturing; further sectors on request.

Cross-sell: at MACFit there is also an ODI → Google Cloud data platform opportunity (ETL Modernization on Google Cloud). When the data sits in on-prem ETL, migration and model work can be planned together.

Blocker Checklist

These rows must be answered before proposal writing starts.

SECTION	BLOCKER QUESTION	ANSWERED?
P1	Full legal name of the organisation and the short name used in the text; single company or group with subsidiaries	
P2	Use-case family and use case — from the Use-Case Catalogue below (only one use case in the Pilot)	
P2	Business goal and trigger — rising churn or segment downgrade, stock-outs or overstock, price and margin pressure, rising delinquency or a low credit approval rate, energy cost, quality losses or falling yield, campaign efficiency, a move of the data to a new platform	
P3	Data sources for the selected use case — systems (CRM, core banking, membership, POS, e-commerce, ERP, MES / SCADA, IoT platform, laboratory etc.) and their number	
P3	How many months of history are available — compared with the minimum in the Family Data Checklist below	
P3	Is there KVKK approval or a legal basis for using personal (customer-level) data for modelling; is anonymisation / pseudonymisation required; "not applicable" if only machine / sensor data is used	
P3	Target definition (label) — e.g. membership not renewed within «NUMBER» days, segment downgrade, delinquency within the next T days, defect classes; for forecasts the series level and horizon	
P4	Volume of the selected use case — number of customers / accounts (Retention, Risk); number of time series, product × location (Demand); SKU × customer segment or number of users and products (Pricing); number of units / sensor tags (Industrial)	
P7	Success metric — technical metric (hold-out) and business metric; for the selected family from the table below	
P7	Is a control group possible — can the business hold a group of customers, stores, units or time periods out of the action (campaign test, A/B test, test and control units / periods)	

IF ANY BLOCKER IS MISSING — the proposal is not written. If it must be written, each missing item is written into the Assumptions and Out of Scope section of the proposal as an assumption, and it is stated that the scope will be reassessed if that assumption does not hold.

The history and KVKK rows of P3 have a special place: if the data does not meet the minimum period or cannot be shared, the Pilot cannot validate and the proposal is not written.

Blocking conditions and their effect on the proposal

#	CONDITION	EFFECT ON THE PROPOSAL	ACTION	STATUS
1	History below the minimum of the family	The Pilot cannot validate; scope narrows or the Pilot is postponed	Clarify in P3 and the Family Data Checklist; consider AI Readiness or data platform work	
2	No target definition (label) — churn, delinquency, defect class	The label cannot be built; P1 takes longer; written into Assumptions	Agree the definition with the business owner in P3	
3	No control group possible	Business value cannot be measured; only the technical metric is reported; written into the value measurement plan	Clarify in P7	
4	No KVKK approval for personal data	Data cannot be shared; the Pilot cannot start	Clarify approval or anonymisation in P3	
5	No data access, working environment or platform decision	P0 cannot be completed; the timeline cannot be written	Clarify the platform in P2, the environment and approval lead time in P3
