Regulatory Data Layer

Technical and Commercial Proposal

Common regulatory data layer, data demand layer per report family, DQ rules and validation, reconciliation, lineage and parallel run for «CUSTOMER»

Proposal No: KOMTAS-«CUSTOMER ABBREVIATION»-REG-B-«YEAR»-«SEQUENCE»

Proposal Date: «dd Month yyyy»

Validity: «proposal date + 1 month»

VARIABLE GLOSSARY — in this template only the fields inside « » change per customer. All other text is fixed.

Identity: «CUSTOMER» short customer name used in the text · «CUSTOMER NAME» full legal name (cover) · «GROUP COMPANIES» group companies in scope; delete the line for a single company · «CUSTOMER ABBREVIATION» short code in the proposal number · «YEAR» year (proposal number; year of a reference project) · «SEQUENCE» proposal sequence number · «dd Month yyyy» proposal date · «proposal date + 1 month» end of validity · «price validity date» latest start date for which the fees stay valid

Context: «CUSTOMER CONTEXT» one paragraph: institution type (bank, participation bank, investment firm), report families concerned, current reporting tools and platform, reason for the request · «A REF» number and date of the Regulatory Data Assessment (service A) report, or of the equivalent analysis, on which the proposal is based

Scope: «PLATFORM» platform of the regulatory data layer agreed with the customer (e.g. Informatica on the existing DWH on Teradata, Oracle or SQL Server, or a cloud platform) · «BAND» sizing band S, M or L from the proposal input form

Report families: «REPORT FAMILY — TCMB / BDDK» block of the TCMB / BDDK legal reports family; keep it only if this family is in scope · «REPORT FAMILY — IFRS 9» block of the IFRS 9 (TFRS 9) family; keep it only if this family is in scope · «REPORT FAMILY — BCBS 239 / PERDAR» block of the BCBS 239 / PERDAR family; keep it only if this family is in scope · «REPORT FAMILY — CREDIT RISK» block of the credit risk reporting family; keep it only if this family is in scope · «REPORT FAMILY — EBA» block of the optional EBA module (banks with an EU parent or EU subsidiary); keep it only if this module is in scope

Commercial: «OPTIONAL» item kept or deleted by sales; if kept, delete the marker · «fee» fee excl. VAT · «amount» payment amount excl. VAT · «day rate» person-day rate (change requests) · «CITY» city where on-site meetings are free of charge

Values: «NUMBER» numeric value (count, threshold, tolerance, days, weeks, months, hours) · «%» percentage

Annex: «REFERENCE PROJECT» further reference project approved for this proposal (no names without permission); otherwise delete the row · «RESULT» measured result of a reference project, only if measured and approved for use; otherwise delete the line

Contacts: «full name» contact name · «title» contact title · «e-mail / phone» contact details

Markers: the report family blocks are resolved as described in the first fill note. «OPTIONAL» items are kept or deleted by sales. The orange DIGITALLENCY DOĞRULASIN tags mark draft statements to be verified before use. FILL NOTE boxes are internal and are deleted before sending.

Contents

FILL NOTE — this template is for service B (Regulatory Data Layer) and is used only after service A (Regulatory Data Assessment) or an equivalent analysis of «CUSTOMER», referenced as «A REF». If neither exists, service A is proposed first.

Report families: every heading, paragraph, bullet, table row and annex page starting with «REPORT FAMILY — TCMB / BDDK», «REPORT FAMILY — IFRS 9», «REPORT FAMILY — BCBS 239 / PERDAR», «REPORT FAMILY — CREDIT RISK» and «REPORT FAMILY — EBA» is kept only for the report families in scope of this proposal; the others are deleted. In the parts kept, only the marker is deleted. The EBA module is offered only to banks with an EU parent or an EU subsidiary.

The common layer foundation is counted once, whatever the number of report families. A report family added later uses the same foundation; only the fee of the family applies.

Statements followed by the orange tag DIGITALLENCY DOĞRULASIN are draft assumptions of the package (durations, effort, band thresholds, data requirements, report lists, regulation references, scope items, roles, tool statements, acceptance criteria, references). They are verified before the template is used; after verification only the tag is deleted. No proposal is sent with a tag in it.

Order of completion: «A REF» → report families (Section 1) → «PLATFORM» → Table 2 → effort and durations (Table 5) → acceptance tolerances (Table 7) → fees (Section 9) → Annex 1 → Annex 2 → remaining « » fields. No commercial figures other than the fees in Section 9 are written into this proposal.

1. Purpose

«CUSTOMER CONTEXT»

The aim of this proposal is to build a common regulatory data layer for «CUSTOMER» on «PLATFORM», on the basis of the assessment «A REF». The data layer gives the regulatory and risk reports one harmonised, historised and GL-reconciled source, with DQ rules, validation before submission, reconciliation controls and lineage from source to report.

The report families in scope of this proposal are:

- **«REPORT FAMILY — TCMB / BDDK» TCMB / BDDK legal reports:** report-ready datasets for the prudential and statistical reports in scope.
- **«REPORT FAMILY — IFRS 9» IFRS 9 (TFRS 9):** datasets for staging, ECL inputs, collateral and cash flows.
- **«REPORT FAMILY — BCBS 239 / PERDAR» BCBS 239 / PERDAR:** lineage, DQ controls and reconciliation evidence for the risk data in scope.
- **«REPORT FAMILY — CREDIT RISK» Credit risk reporting:** datasets for exposure, rating, collateral, limits and concentration.
- **«REPORT FAMILY — EBA» EBA reports (optional module):** datasets for the reporting packages of the EU parent or EU subsidiary.

The fee consists of one line for the common layer foundation, counted once, one line per report family and one line for the parallel run (Section 9).

2. Scope

2.1 Service Structure

Service	Focus	Result	Pricing
A — Regulatory Data Assessment	Report inventory, source-to-report lineage of priority reports, BCBS 239 gap assessment, target architecture; 4 to 8 weeks «DIGITALLENCY DOĞRULASIN»	Gap table, target architecture, roadmap and estimate for B	Fixed fee
B — Regulatory Data Layer	Common regulatory data layer, data demand layer per report family, DQ rules and validation, reconciliation, lineage, parallel run, handover	Report-ready datasets reconciled with the current reports	Common layer foundation once + fee per report family
C — Run	Period-end support, regulation changes from a monthly capacity, DQ monitoring report, small improvements	Data layer kept in line with the regulatory calendar and with changes	Monthly fee

Table 1 — Service structure. This proposal covers service B.

2.2 Prerequisite

This proposal is based on the assessment «A REF». Its report inventory, lineage map, BCBS 239 gap table, DQ issues list and target architecture are the basis of the work.

If the assessment was not carried out by Komtaş, the equivalent analysis of «CUSTOMER» is reviewed in P0 (report inventory, lineage of the reports in scope, target architecture). The build starts only after the review is accepted. «DIGITALLENCY DOĞRULASIN»

2.3 Sizing Basis

Sizing is based on the values below, taken from «A REF» and the proposal input form. The values are confirmed in P0 (Section 7.1).

Sizing Input	Value
Report families in scope	«NUMBER»
Reports in scope	«NUMBER»
Source systems feeding the data layer	«NUMBER»
Most frequent reporting cycle	Monthly / quarterly / weekly / daily
DQ rules to be implemented	«NUMBER»
Platform of the data layer	«PLATFORM»
Sizing band	«BAND»

Table 2 — Values on which sizing is based. Source: «A REF» and the proposal input form.

The band (S / M / L) is the highest band reached by at least three of the five drivers: reports in scope (S ≤10 · M 11–40 · L >40), source systems (S ≤5 · M 6–15 · L >15), most frequent cycle (S monthly or quarterly · M weekly · L daily), DQ rules (S ≤150 · M 151–500 · L >500) and report families (S 1 · M 2–3 · L >3). «DIGITALLENCY DOĞRULASIN»

2.4 Scope Topics

The work covers the topics below. «DIGITALLENCY DOĞRULASIN»

#	Topic	Content
1	Common regulatory data layer	Data model and build for transactions, contracts and accounts, customers and counterparties, collateral and GL; harmonised, historised and reconciled to the GL; staging from the source systems
2	Data demand layer	Report-ready datasets per report family in scope, with the mapping of each report field to the data layer
3	DQ rule catalogue and validation engine	Rules per critical data element with thresholds; checks before submission; return and correction loop to the data owners
4	Reconciliation	Reconciliation controls from source to data layer, from data layer to GL and between reports
5	Lineage and audit trail	Lineage from source to report field for the reports in scope; record of loads, rule results and manual adjustments
6	Parallel run	Reports produced from the new data layer and compared with the current reports for the agreed periods
7	Handover	Documentation, operating guide, training of the teams of «CUSTOMER», hypercare

Table 3 — Scope topics.

2.5 Boundaries to Other Services

- **Data Governance:** this package builds the reporting data, its DQ rules and its lineage. The enterprise governance framework (organisation, policies, business glossary, roles, data catalogue) is the subject of the Data Governance service; governance gaps found in the work are passed to it.
- **DWH Assessment:** evaluates the data platform as a whole. This package looks only at the regulatory reporting chain, from the source systems to the reports.

- **Report production tools and regulator submission software:** the tools that produce the report layouts and submit them to the regulator are not part of this package. An integration with such a tool is in scope only if an integration line is added in service B. «DIGITALLENCY DOĞRULASIN»

3. Approach

3.1 Target Architecture

The data layer follows the target architecture of «A REF»: «DIGITALLENCY DOĞRULASIN»

- **Source systems:** core banking, loans, treasury, collateral, GL, rating and the other sources in scope.
- **Staging:** extracts of the source systems loaded without change, with load control.
- **Common regulatory data layer:** one harmonised and historised model for transactions, contracts and accounts, customers and counterparties, collateral and GL, reconciled to the GL.
- **Data demand layer:** report-ready datasets per report family.
- **Reporting tools and regulator formats:** the existing tools of «CUSTOMER» read the data demand layer.
- **Across all layers:** DQ rule catalogue and validation engine, reconciliation controls, lineage from source to report and audit trail.

3.2 Platform

The data layer is built on «PLATFORM». Typical options are Informatica PowerCenter or IDMC with Informatica Data Quality on the existing DWH of «CUSTOMER» (for example Teradata, Oracle or SQL Server), or a cloud data platform. The method, the phases and the deliverables are the same on every platform. «DIGITALLENCY DOĞRULASIN»

3.3 Common Layer and Data Demand Layer

The common layer foundation is built once: staging, the core entities of the data model, history, GL reconciliation, the DQ and validation framework, the lineage and audit trail mechanism. Each report family then adds the entities and fields it needs and its own data demand layer.

Each report field in scope is mapped to the data layer. Fields that cannot be filled from the source systems are listed with the owner who provides them; they are not created by assumption.

3.4 DQ and Validation

The DQ rule catalogue holds every rule with its critical data element, type, threshold, owner and action. The validation engine runs the rules on every load and before each submission: «DIGITALLENCY DOĞRULASIN»

- **Rule types:** completeness, validity against code lists, consistency between fields and between reports, reconciliation to the GL, timeliness of the loads.
- **Thresholds:** each rule has a documented threshold agreed with the regulatory reporting unit; a result above the threshold stops the dataset concerned.
- **Return and correction loop:** records that fail are returned to the data owner with the rule and the reason; the correction is recorded in the audit trail.

3.5 Parallel Run

Each report family is run in parallel with the current reporting for «NUMBER» reporting periods. Differences above the agreed tolerance are analysed, explained and either corrected in the data layer or accepted in writing by the regulatory reporting unit. «DIGITALLENCY DOĞRULASIN»

4. Activities and Timeline

4.1 Phases and Exit Criteria

The work is carried out in six phases. P2 to P4 are repeated for each report family; the order of the families follows the roadmap of «A REF». «DIGITALLENCY DOĞRULASIN»

Phase	Activities	Exit Criterion
P0 Kick-off and design confirmation	Kick-off, review of «A REF», environments, access, detailed design of the data model and of the first family	Design and plan approved in writing
P1 Common layer foundation	Staging, core entities, history, GL reconciliation, DQ and validation framework, lineage and audit trail mechanism	Foundation loaded for one period and reconciled to the GL
P2 Data demand layer per family	Additional entities and fields, field mapping, report-ready datasets	Datasets of the family complete for one period
P3 DQ, validation and reconciliation	Rules of the family in the catalogue, thresholds, reconciliation controls, lineage of the reports	Rules active with documented thresholds; lineage documented
P4 Parallel run	Parallel run for the agreed periods, analysis of differences, corrections	Acceptance criteria of Table 7 met
P5 Handover	Documentation, operating guide, training, hypercare	Handover approved; hypercare closed

Table 4 — Phases and exit criteria.

4.2 Effort and Durations

FILL NOTE — take the effort and the durations from the proposal input form (regulatory-reporting-3b-data-layer-girdi-formu): common layer foundation once + report families × band effort + parallel run. Draft values:

Common layer foundation, once: S ~60 pd · M ~90 pd · L ~140 pd. Per report family: S ~40 pd · M ~70 pd · L ~110 pd. Parallel run: «NUMBER» pd per family; there is no draft value yet. «DIGITALLENCY DOĞRULASIN»

The values are not based on recorded effort. Delete this box before sending.

Line	Effort (pd)	Duration (weeks)
Common layer foundation (P0 – P1)	«NUMBER»	«NUMBER»
«REPORT FAMILY — TCMB / BDDK» TCMB / BDDK legal reports (P2 – P3)	«NUMBER»	«NUMBER»
«REPORT FAMILY — IFRS 9» IFRS 9 (TFRS 9) (P2 – P3)	«NUMBER»	«NUMBER»
«REPORT FAMILY — BCBS 239 / PERDAR» BCBS 239 / PERDAR (P2 – P3)	«NUMBER»	«NUMBER»
«REPORT FAMILY — CREDIT RISK» Credit risk reporting (P2 – P3)	«NUMBER»	«NUMBER»
«REPORT FAMILY — EBA» EBA reports (P2 – P3)	«NUMBER»	«NUMBER»
Parallel run (P4)	«NUMBER»	«NUMBER»
Handover and hypercare (P5)	«NUMBER»	«NUMBER»
Total	«NUMBER»	«NUMBER»

Table 5 — Effort and durations. Band: «BAND».

Families can overlap where the team allows it. The parallel run follows the reporting calendar of «CUSTOMER»: its duration depends on the frequency of the reports and cannot be shortened by adding people.

4.3 Schedule

The detailed schedule is agreed in P0. The total duration is «NUMBER» weeks, provided the assumptions in Section 7 hold. Delays in access, in the delivery of source data or in the availability of report owners move the schedule by the same amount.

5. Deliverables and Acceptance

5.1 Deliverables

Documents are delivered in Turkish, in editable format, together with a PDF copy. The data model, the data flows and the DQ rules remain in the environment of «CUSTOMER».

#	Deliverable	Phase	Content
D1	Detailed design	P0	Data model, field mapping approach, DQ and validation design, environments, plan
D2	Common regulatory data layer	P1	Staging, core entities, history and GL reconciliation in operation on «PLATFORM»
D3	Data demand layer per family	P2	Report-ready datasets and field mapping of each family in scope
D4	DQ rule catalogue and validation engine	P1 – P3	Rules with thresholds, owners and actions; validation before submission; return loop
D5	Reconciliation controls	P1 – P3	Controls from source to data layer, to GL and between reports, with their results
D6	Lineage documentation	P3	Lineage from source to report field for the reports in scope
D7	Parallel run report	P4	Results per family and period, differences, explanations and corrections
D8	Handover package	P5	Technical documentation, operating guide, period-end run book, training

Table 6 — Deliverables.

5.2 Acceptance

Criterion	Measure
Parallel-run reconciliation	For each report family in scope, the figures produced from the data layer agree with the current reports within the tolerance of «NUMBER» for «NUMBER» consecutive reporting periods, or each difference is explained and accepted in writing «DIGITALLENCY DOĞRULASIN»
DQ rules	The rules of the catalogue for the families in scope are active, with documented thresholds and owners
Lineage	Lineage from source to report field is documented for every report in scope
GL reconciliation	The common layer is reconciled to the GL for each period of the parallel run

Table 7 — Acceptance criteria per report family.

Each report family is accepted separately. Each deliverable is reviewed by «CUSTOMER» within «NUMBER» working days of delivery. If no written objection is received in that period, the deliverable is deemed accepted.

Differences caused by errors in the source data or by manual adjustments in the current reports are recorded and passed to their owners; they do not prevent acceptance once they are explained.

6. Customer Responsibilities

«CUSTOMER» is responsible for the items below. A delay in any of them moves the schedule by the same amount.

- Appoint a project coordinator in the regulatory reporting unit who is available throughout the work.
- Provide the development, test and production environments on «PLATFORM», with the licences of the tools used.
- Provide access to the source systems and extracts of the source data within «NUMBER» working days from the start of P0.
- Make the report owners and the regulatory SMEs available for field mapping, thresholds and the analysis of parallel-run differences.
- Provide the current reports and their working files for each period of the parallel run.
- Correct data errors in the source systems returned by the validation engine.

The participation expected from «CUSTOMER» is: «DIGITALLENCY DOĞRULASIN»

Role	Expected Contribution	Participation
Project sponsor	Approval of design and acceptance	P0, P4, P5
Regulatory reporting unit (finance / risk)	Field mapping, thresholds, interpretation of the regulations, parallel run	P0 – P5
Data owners	Meaning of the fields, correction of source data	P1 – P4
IT	Environments, access, source extracts, scheduling, operation after handover	P0 – P5

Table 8 — Expected participation of «CUSTOMER». Total expected effort is «NUMBER» person-days.

7. Assumptions and Out of Scope

7.1 Assumptions

The duration, effort and fee in this proposal are based on the assumptions below. If they do not hold, the impact is assessed through a change request.

- The work starts within «NUMBER» working days of contract signature.
- The values in Table 2 come from «A REF» and are confirmed in P0. If they indicate a different band, effort and duration are reassessed at the end of P0. «DIGITALLENCY DOĞRULASIN»
- The regulations and report formats in force at the start of P0 are the basis of the work. Changes published during the work are handled through change requests.
- The existing reporting tools of «CUSTOMER» read the data demand layer without change, unless an integration line is added in Section 9.
- The work is carried out mainly remotely, with access to the environments of «CUSTOMER»; workshops and parallel-run reviews can be held on site in «CITY».
- The working language and the language of the deliverables is Turkish.

7.2 Out of Scope

The topics below are outside the scope of this proposal. If requested, they are assessed and proposed separately. «DIGITALLENCY DOĞRULASIN»

- Cleansing of data in the source systems.
- Design of report layouts.
- Correspondence with the regulator.
- Legal interpretation of the regulations; the regulatory reporting unit of «CUSTOMER» decides.
- Changes to core systems.
- Report production tools and regulator submission software, unless an integration line is added in Section 9.
- Report families not listed in Section 1.
- Operation after hypercare (service C Run).
- Licence and infrastructure costs.

7.3 Risks and Change Management

Risk	Impact	Mitigation
Quality of the source data outside the control of the project	Parallel-run differences, schedule	Validation engine and return loop from P1; owners named in P0
Regulatory change during the project	Scope, schedule	Change request; known changes planned in P0
Regulatory SMEs of «CUSTOMER» not available	Field mapping, thresholds, acceptance	Session plan agreed in P0
Manual adjustments in the current reports not documented	Unexplained differences in the parallel run	Manual adjustments recorded per period from the first parallel run

Table 9 — Risks.

Any request that affects the scope, the schedule or the fee is handled through a written change request. It is not carried out before its impact and fee are approved.

8. Team

8.1 Komtaş Team

Role	Responsibility	Participation
Engagement Lead / Regulatory Reporting Business Analyst	Plan, field mapping, thresholds, parallel run, acceptance	P0 – P5 «DIGITALLENCY DOĞRULASIN»
Data Architect	Data model, common layer, lineage and audit trail design	P0 – P3, part time in P4 – P5
Data Engineers (ETL)	Staging, data flows, data demand layer, reconciliation controls	P1 – P5; «NUMBER» people
DQ Engineer	DQ rule catalogue, validation engine, return loop	P1 – P4

Table 10 — Komtaş team and roles.

- If a change in the team is needed, the replacement has at least equivalent qualifications and is notified to «CUSTOMER» in advance.

8.2 Governance and Reporting

- Weekly progress meeting on the status per report family, open items, DQ results and schedule.
- Steering meeting with the sponsor at the end of each phase and of each parallel-run period.
- Any issue that affects the schedule or the scope is reported in writing in the week it is found.

9. Effort and Fees

9.1 Basis of the Fee

The fee consists of a fixed fee for the common layer foundation, counted once, a fixed fee per report family in scope and a fixed fee for the parallel run. Each line covers the scope described in Sections 2 and 3 for that line.

9.2 Fees

#	Fee Line	Effort (pd)	Fee (excl. VAT)
F0	Common layer foundation (once, used by all report families)	«NUMBER»	«fee»
F1	«REPORT FAMILY — TCMB / BDDK» TCMB / BDDK legal reports	«NUMBER»	«fee»
F2	«REPORT FAMILY — IFRS 9» IFRS 9 (TFRS 9)	«NUMBER»	«fee»
F3	«REPORT FAMILY — BCBS 239 / PERDAR» BCBS 239 / PERDAR	«NUMBER»	«fee»
F4	«REPORT FAMILY — CREDIT RISK» Credit risk reporting	«NUMBER»	«fee»
F5	«REPORT FAMILY — EBA» EBA reports (optional module)	«NUMBER»	«fee»
PR	Parallel run of the families in scope	«NUMBER»	«fee»
I1	«OPTIONAL» Integration with the report production or submission tool of «CUSTOMER»	«NUMBER»	«fee»
	Total	«NUMBER»	«fee»

Table 11 — Fees per line. Band «BAND». All fees exclude VAT.

9.3 Payment Schedule

Payment Item	Rate / Basis	Amount (excl. VAT)
Exit approval of P1 — common layer foundation	F0	«amount»
Exit approval of P3 for each report family	«%» of the family fee	«amount»
Acceptance of each report family (Table 7)	«%» of the family fee + PR share	«amount»

Table 12 — Payment schedule.

9.4 Change Requests

Work outside the scope of this proposal is offered on the basis of person-days × day rate («day rate», excl. VAT) and is carried out only after written approval.

9.5 Not Included in the Fee

- Licence and infrastructure costs of «PLATFORM» and of the tools used.
- Changes to the source systems and to the reporting tools.
- Operation after hypercare (service C Run).
- Additional work approved through change requests.

10. Next Step

After handover, the data layer is operated through the regulatory calendar and extended step by step. The usual follow-on work is:

Need	Follow-On Work
Period-end support and regulation changes	Service C Run: monthly capacity for period-end runs, changes and DQ monitoring
Further report families	Additional families on the same common layer foundation
Enterprise governance of the data	Data Governance
Operation of the data platform	Data Platform Operations
Industry data model for the bank	Industry Data Models
Modernisation of the DWH	DWH Assessment and DWH modernisation

Table 13 — Follow-on work.

After hypercare, the data layer can be operated by Komtaş under service C Run: support for period-end runs, implementation of regulation changes from a monthly capacity, a monthly DQ monitoring report and small improvements. Run is offered in a separate proposal. «DIGITALLENCY DOĞRULASIN»

11. Commercial Terms

11.1 General Terms

- All fees in this proposal are stated in Turkish lira and exclude VAT. Statutory taxes, duties and charges are not included in the fees.
- The proposal is valid until «proposal date + 1 month».
- The fees are valid on condition that the work starts by «price validity date». If the start moves beyond that date for any reason, the fees and pricing terms are reassessed by mutual agreement in the light of the economic and financial conditions at the time of the work.
- The proposal is based on the assessment «A REF» and the assumptions in Section 7.1; if the basis changes materially, the proposal is renewed.
- The fee is calculated per line as set out in Section 9: common layer foundation once, per report family and parallel run.
- Licence and infrastructure costs are not part of this proposal.

- The legal interpretation of the regulations remains with the regulatory reporting unit of «CUSTOMER»; Komtaş implements the interpretation agreed in writing.
- Payment follows the payment schedule in Section 9. Invoices are payable within «NUMBER» days of the invoice date.
- Scope changes are managed through a written change request; no change is implemented before its impact analysis is approved.
- The parties keep confidential all information they access within the scope of the work. A separate non-disclosure agreement is signed where needed.
- The rights of use of the deliverables, including data models, data flows, DQ rules and documentation, belong to «CUSTOMER»; Komtaş retains its intellectual property rights in its methodology, templates and general know-how.
- This proposal forms an integral annex to the contract to be signed by the parties. In the event of a conflict between the contract and the proposal, the contract prevails.

11.2 Proposal Contact Details

Questions on this proposal and its scope can be addressed to the contacts below.

Area of Responsibility	Full Name	Title	Contact
Commercial	«full name»	«title»	«e-mail / phone»
Technical	«full name»	«title»	«e-mail / phone»

11.3 Proposal Annexes

This proposal is submitted with the following annexes:

- ANNEX-1 — Report Family Pages
- ANNEX-2 — About Komtaş

ANNEX-1 — Report Family Pages

> *FILL NOTE — keep only the pages of the report families in scope and delete the family marker in their headings.*

The regulatory data layer serves five report families. All families use the same common regulatory data layer; each family has its own data demand layer with report-ready datasets. The page of each family in scope is given below: typical reports, source systems, critical data elements, typical DQ rules and frequency. The actual list is set in the report inventory of «CUSTOMER».

«REPORT FAMILY — TCMB / BDDK» TCMB / BDDK Legal Reports

Item	Description
Typical reports	Prudential reports to BDDK (e.g. capital adequacy, liquidity, large exposures, financial statements) and statistical reports to TCMB (e.g. balance sheet, interest rate, foreign exchange position); the reports referred to as VTM «DIGITALLENCY DOĞRULASIN»
Typical source systems	Core banking, loans, deposits, treasury, payments, general ledger (GL), customer master
Critical data elements	Balance, currency, maturity, interest rate, product type, counterparty type and sector, GL account
Typical DQ rules	Reconciliation of balances to the GL; mandatory fields filled; codes valid against the regulator code lists; consistency of the same figure across reports
Frequency	Daily, weekly, monthly or quarterly, as set by the regulator for each report

Table 14 — TCMB / BDDK legal reports family.

«REPORT FAMILY — IFRS 9» IFRS 9 (TFRS 9)

Item	Description
Typical reports	Staging (stage 1, 2, 3), inputs of the expected credit loss (ECL) calculation, collateral, contractual and expected cash flows, provisioning and disclosure datasets «DIGITALLENCY DOĞRULASIN»
Typical source systems	Loans, collateral, rating, core banking, GL, ECL or provisioning tool
Critical data elements	Exposure at reporting date, days past due, restructuring flag, rating at origination and at reporting date, PD, LGD, EAD inputs, collateral value and valuation date, cash flow schedule
Typical DQ rules	Fields of the staging criteria complete; days past due consistent with the payment history; collateral valuation not older than the agreed limit; ECL results reconciled to the provisions in the GL
Frequency	Monthly and quarterly

Table 15 — IFRS 9 (TFRS 9) family.

«REPORT FAMILY — BCBS 239 / PERDAR» BCBS 239 / PERDAR

Item	Description
Typical reports	Evidence for the risk data aggregation and risk reporting principles: lineage from source to report, DQ controls and their results, reconciliations, data ownership, timeliness of the risk data; PERDAR is treated as the BDDK counterpart of these principles «DIGITALLENCY DOĞRULASIN»
Typical source systems	All sources of risk data in scope, the common regulatory data layer, the risk and finance reports
Critical data elements	The critical data elements of the risk reports in scope, each with an owner, a definition and a source
Typical DQ rules	Completeness and accuracy checks per critical data element; reconciliation of risk data to the GL; timeliness of each run against the agreed deadline; record of every manual adjustment
Frequency	Every reporting period; evidence kept for supervisory review

Table 16 — BCBS 239 / PERDAR family.

«REPORT FAMILY — CREDIT RISK» Credit Risk Reporting

Item	Description
Typical reports	Exposure by customer, risk group, sector, product and rating; limits and their use; collateral coverage; concentration reports «DIGITALLENCY DOĞRULASIN»
Typical source systems	Loans, limits, rating, collateral, treasury, customer and risk group master data
Critical data elements	Exposure amount (cash and non-cash), limit, rating grade, collateral value, risk group, sector code, country
Typical DQ rules	Exposure not above the approved limit without a recorded exception; every customer assigned to one risk group; rating not past its validity date; collateral linked to an existing exposure
Frequency	Daily for limit monitoring; monthly for management and regulatory reports

Table 17 — Credit risk reporting family.

«REPORT FAMILY — EBA» EBA Reports (Optional Module)

Item	Description
Note	Optional module, offered only to banks with an EU parent or an EU subsidiary «DIGITALLENCY DOĞRULASIN»
Typical reports	Group reporting packages in the EBA formats (e.g. FINREP and COREP type templates) prepared for the EU parent or for the EU subsidiary
Typical source systems	The same sources as the TCMB / BDDK and credit risk families, plus the mapping to the group chart of accounts
Critical data elements	Group chart of accounts mapping, counterparty classification by the EU definitions, exposure class, capital items
Typical DQ rules	Mapping complete for every GL account in scope; consistency with the local reports of the same period; validation rules of the group format applied before submission
Frequency	Quarterly or as set by the group reporting calendar

Table 18 — EBA reports family (optional module).

ANNEX-2 — About Komtaş

> *FILL NOTE — the figures in Table 19 and in the bullets below come from the proposals of 2026. Check them against the current corporate profile before sending.*

Komtaş is an independent information technology company that has specialised in enterprise data management in Türkiye since 1989. More than 35 years of focus on a single field has given it an end-to-end view that follows data from the moment it is created to the moment a decision is taken.

Indicator	Value
Founded	1989 — more than 35 years of continuous data-focused activity
Specialist staff	250+ data engineers, architects, consultants and analysts
Offices	Istanbul, Ankara, Izmir, Dubai
Strategic partnerships	10+ global technology vendors
Focus area	Data governance, data architecture, analytics, artificial intelligence and AI agent based solutions
Positioning	"From Data to Agents" — integrated capability from data to AI agents

Table 19 — Komtaş corporate profile.

Service Capabilities

The service portfolio of Komtaş covers the whole life cycle of a data initiative:

- **Data Governance and Data Management:** data governance maturity assessment, framework and organisation design, policy and process design, data catalogue, business glossary, data quality management, master data management, data privacy and classification.
- **Data Architecture and Engineering:** data warehouse and data lake architectures, lakehouse design, data integration and streaming architectures, cloud and on-premises modernisation.
- **Analytics and Artificial Intelligence:** enterprise reporting, advanced analytics, machine learning models, generative AI applications and AI governance.
- **Managed Services and Support:** P1 / P2 / P3 support for production systems, capacity and performance management, continuous improvement services.
- **Training and Capability Building:** product training, role-based data governance training, train-the-trainer programmes.

Regulatory Reporting Experience

> *FILL NOTE — the references in Table 20 are anonymous. Do not add institution names, contact persons or result figures without written approval; «YEAR» is filled once the year of each project is confirmed, and «REFERENCE PROJECT» rows are deleted if there is no further approved reference.*

Regulatory reporting projects in the scope of this package are listed below. Reference calls can be arranged on request, subject to the approval of the institutions concerned. «DIGITALLENCY DOĞRULASIN»

Institution	Work	Report Families	Year
A private bank	Legal reporting data layer: one common data layer for IFRS 9, VTM, PERDAR, EBA and credit risk reporting	TCMB / BDDK, IFRS 9, BCBS 239 / PERDAR, credit risk, EBA	«YEAR»
A participation bank	Legal reporting data moved from the core banking platform to the enterprise data warehouse	TCMB / BDDK	«YEAR»
A credit bureau (validation of bank submissions)	Rule-based validation of the data sent by the banks; a submission above a 5% error threshold is returned to the bank; built with Informatica	Credit risk, DQ and validation	«YEAR»
«REFERENCE PROJECT»	«RESULT»		«YEAR»

Table 20 — Regulatory reporting references (anonymous).

Why Komtaş

- **Focus:** Komtaş has worked only in the data field for more than 35 years, with more than 250 specialists and 4 offices.
- **One layer for all reports:** the report families share one common data layer, reconciled to the GL, with one DQ rule catalogue and one lineage.
- **From assessment to operation:** assessment, build of the data layer and monthly operation are provided by the same organisation (Section 10).
