AI GOVERNANCE READINESS ASSESSMENT · SERVICE A

AI Governance Check — Proposal Input Form

Information for a statement-based first view of whether the AI systems the organisation declares are under control, and the proposal field each item fills. Once the form is returned, the proposal text is produced.

Rows marked ● are BLOCKERS — the proposal cannot be written without them and they cannot be filled with assumptions.
If rows marked ○ remain missing, they are written into the proposal as assumptions and go to section 5.

LIMIT OF SERVICE A: the evidence is documents (inventory, policies, approval records, role definitions) and interviews; Komtaş is not given system access and no measurement is committed. The scope is the AI systems the organisation declares; there is no search for shadow AI or third-party AI.

A does not produce a maturity level, a score or a closing plan. The result is the status of the five-item prerequisite gate for each declared AI system (Met / Partly met / Not met / Not assessed), an indicative result marked as statement-based (Governed / Partly governed / Not governed) and a statement-based provisional risk class. Key risks and the recommended next step come with it.

If the customer expects a level per dimension, a shadow AI search, a regulatory scope map or a closing plan, the right service is B, not A; this is clarified in the first meeting. The assessment is not legal advice and produces no compliance statement.

A. Organisation and Proposal Details

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Organisation and legal entities in scope — single company or group**	Cover, 1. Executive Summary — «CUSTOMER», «legal entities in scope»	
○	Proposal addressee — name, title, unit	Cover, 9. Proposal Terms — «full name», «title»	
○	Proposal date and expected decision date	Cover «dd Month yyyy», 9. validity «proposal date + 1 month»	
○	Is there an RFP or specification	Structure of the proposal, 2.4 source column «RFP / statement»	
○	Procurement process and approval steps	9. Proposal Terms	

B. Decision — What the Assessment Will Support

The output is not a maturity grade but a per-system result on whether the AI systems in use are under control. A shows quickly how far the declared systems meet the prerequisites; it produces no compliance statement or legal opinion.

The trigger is usually an internal audit finding, a supplier questionnaire from a customer in the EU, the KVKK guides, the board asking “which AI systems do we use” or a new high-risk use.

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Which decision will this assessment support — closing an audit finding, answering an EU customer questionnaire, KVKK preparation, informing the board, a baseline before a new high-risk use**	1. Executive Summary «DECISION», 2.1 Purpose of the Programme	
●	**Is the expected output the gate per system and a statement-based indicative result, or a level per dimension, a shadow AI search, a governance matrix and a closing plan**	Service choice — A or B, 2.2 Services	
●	**Does the customer expect a compliance statement, a conformity certificate or a legal opinion — if so, this service does not fit**	2.5 Out of Scope, 3.1 Result Format	
○	Is there a triggering document — audit report, customer questionnaire, board request; can it be shared	1. Executive Summary, P1 focus	

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
○	Has an AI governance or compliance exercise been carried out before; what was the result	5.1 Assumptions — «assumption — from input form»	

C. Sponsor and Management Access

> The gate cannot be checked without interviewing business owners and technical owners. The sponsor is the person who opens access to them and to the legal, compliance and risk units; if no name is written, the interviews do not get into the calendar.

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Who is the sponsor — can risk, compliance, the CDO, the CIO or an executive with decision authority be named**	7.3 Governance and Reporting, 5.3 Assumptions	
○	Is there an AI committee or governance board; who chairs it	3.1 Result Format, P1 focus	
○	Will access to business owners and technical owners go through the sponsor or be arranged one by one	6. Project Plan, 7.2 Expected participation	
○	To whom will the result be presented — risk / compliance, senior management, the board, internal audit	1. Executive Summary, P4 read-out	

D. Declared AI Systems

> The unit of the result is the AI system: each inventory record represents one use. The number of systems in scope is the main sizing driver; narrowing the scope by system is the most effective schedule lever.
>
> If no AI system is in use or planned for production, A is not the right service: the work stops in P0 and AI Readiness Assessment is discussed. AI features inside vendor products also count as AI systems.

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Is at least one AI system in use or planned for production — including AI features in vendor products**	Service choice, 2.5 Out of Scope	
●	**Names and number of the declared AI systems — written into the per-system table in the worksheet**	Driver 1, 2.4 «AI SYSTEMS» and «N», 2.3 Prerequisite gate	
○	Is an AI inventory kept; where, and who updates it	Gate item 1, 5.2 Evidence and access	
○	Which systems are in production, and which feed decisions about customers or employees	Gate item 2, P1 focus, 5.1 Assumptions	
○	Are any systems, units or legal entities to be left out of scope	2.5 Out of Scope	

E. Scale

> In A, scale values are taken as statements and are not verified. The number of interviews sets the schedule: for each system at least the business owner and the technical owner, and at organisation level the KVKK contact (DPO) and legal, are interviewed.

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Estimated number of people to interview and their distribution across units**	Driver 3, 2.4 «N», 6. Project Plan, 7.2	
○	Number of business units using AI	Driver 2, 2.4 «N»	
○	Number of legal entities or locations	Driver 6, 2.4 «N»	

F. Prerequisite Gate — Check per AI System

> The main output of A is the status of these five items for each declared AI system. The question here is not whether an item is met but whether it can be checked in P1 through documents and interviews; a “no” does not stop the proposal, it is the first finding.
>
> An item that cannot be checked is not guessed; it is reported as “Not assessed”. Definitions and worksheets are at the end.

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Can the five gate items be checked for each declared AI system through documents and interviews**	2.3 Prerequisite gate, 3. Methodology, 5.2 Evidence and access	
○	Item 1 · Registered — can the inventory record and the business owner / technical owner assignment be shown	2.3, P1 evidence collection, 5.2	
○	Item 2 · Classified — are purpose, affected decision and risk class with rationale written per system	2.3, P1, 5.2	
○	Item 3 · Lawful data use — can the legal basis record, any DPIA and the vendor contract review be shared	2.3, P1, 5.2	
○	Item 4 · Approved with a way back — can the approval, the oversight point and the rollback / switch-off plan be shown	2.3, P1, 5.2	
○	Item 5 · Monitored — can the tracked metric and threshold, the incident path and the review date be shown	2.3, P1, 5.2	
○	Number of third-party / vendor AI components — external model, API or AI embedded in a product (statement)	Driver 4, 2.4 «N»	
○	Applicable regulators — KVKK, BDDK, SPK, Ministry of Health, TCMB, BTK, RTUK; EU exposure (statement)	Driver 5, 2.4 «N», 5.1 Assumptions	

G. Access to Documents and Interviews

> The evidence sources of A are documents and interviews; Komtaş is not given system access. Where no document exists, the related gate item remains statement-based and this is marked separately in the result.

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Can the AI inventory or system list, the AI policy, approval records and role definitions be shared**	P1 evidence collection, 5.2 Evidence and access	
○	Can interviews with business owners and technical owners be arranged	7.2 Expected participation, 6. Project Plan	
○	Can the KVKK contact (DPO), legal, risk and information security be interviewed	7.2 Expected participation	
○	Will interviews be held remotely, on site or hybrid	5.4 «remotely / on site / hybrid»	

H. Commercial Framework

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
○	Is there an approved budget	8. Project Fees — «fee»	
○	Is there a schedule constraint — audit date, questionnaire deadline, board presentation, regulatory date	6. Project Plan	
○	Are there competitors; who	Emphasis and section weights	
○	Will B or follow-on work such as inventory set-up be discussed afterwards	2.5 Out of Scope, follow-on proposal	

Declared AI Systems — Worksheet

The systems declared in section D are entered here. In A, values are statements and are not verified; the provisional risk class is indicative and not final until the organisation's legal / compliance unit confirms it.

#	AI SYSTEM	PURPOSE / DECISION	BUSINESS OWNER	SOURCE	STATUS	PERSONAL DATA	PROVISIONAL RISK CLASS
1							
2							
3							
4							
5							

SOURCE: in-house · vendor · embedded in product. STATUS: idea · development · pilot · production · retired. PERSONAL DATA: yes · special category · no · unknown. PROVISIONAL RISK CLASS: unacceptable · high · limited · minimal; use of a general-purpose model (GPAI) is marked separately. Each row represents one use: if the same model is used for two different purposes, two rows are written.

Prerequisite Gate — Worksheet per AI System

#	PREREQUISITE	HOW IT IS VERIFIED	IF NOT MET
1	Registered — the system is recorded in an inventory with a named business owner and technical owner	Inventory record or system list; ownership assignment	A system that is not known cannot be governed; it is unclear whom to ask about the other items
2	Classified — purpose and affected decision are written; a risk class is assigned with rationale and date	Risk class field of the inventory record or classification record	Which controls apply cannot be decided; a high-risk use is run as if it were minimal risk
3	Lawful data use — data sources, personal data status and legal basis are written (DPIA where needed); contract constraints are checked for third-party AI	Legal basis record, DPIA, contract review	A system that processes personal data is already within KVKK today; the gap cannot be closed retrospectively
4	Approved with a way back — a named approver approved production use; a human oversight point and a rollback / switch-off plan exist	Approval record or committee decision; rollback plan	The system is in production without approval; it is unclear who would stop it if it fails
5	Monitored — at least one metric is tracked against a threshold; an incident path and a periodic review date exist	Monitoring report or dashboard, incident log, review minutes	A system that is not monitored counts as not in production; problems are learned from users or from audit

The item columns are filled with a first estimate in P0 and with document and interview evidence in P2: Met · Partly met · Not met · Not assessed. With more than twenty systems, the gate is applied first to the high-risk and production systems and to a sample of the rest; this is written into the proposal as an assumption.

#	AI SYSTEM	1 REGISTERED	2 CLASSIFIED	3 DATA	4 APPROVED	5 MONITORED	INDICATIVE RESULT
1							
2							
3							
4							
5							

> INDICATIVE RESULT RULE — Governed if all five items are met and none is "Not assessed"; Not governed if the system is not registered, has no business owner or is running in production without approval; Partly governed in every other case. A system processing personal data without a written legal basis is never Governed.
>
> The result is marked as statement-based. No system coming out as Governed is also a valid result.

Band Estimate — Service A

A uses six of the ten drivers; the four drivers specific to B are not asked in A. The band is the highest band that at least three drivers fall into.

#	DRIVER	SMALL	MEDIUM	LARGE	RESULTING BAND
1	Number of AI systems in scope	≤ 5	6 – 20	> 20	
2	Number of business units using AI	1 – 2	3 – 6	> 6	
3	Number of people to interview	≤ 10	10 – 25	> 25	
4	Number of third-party / vendor AI components	≤ 3	4 – 10	> 10	
5	Number of applicable regulators	1	2 – 3	> 3	
6	Number of legal entities or locations	1	2 – 3	> 3	
	RESULT — selected band	1 week · 6 pd	1.5 weeks · 9 pd	2 weeks · 12 pd	

CUSTOMER EFFORT — small 3 days · medium 4 days · large 5 days. The load comes from business owner and technical owner interviews and from KVKK, legal and risk interviews, and grows with the number of systems; this expectation is written in section 7.2 of the proposal.

PHASE SPLIT — P0 Scope and system list 1 day · P1 Documents and interviews 3–4 days · P2 Gate check and report 2 days · P4 Read-out and validation 1 day. A has no P3.

KOMTAŞ TEAM — Assessment Lead · AI Governance Consultant · AI / ML Consultant; written in section 7.1 of the proposal.

If B is taken after A, A's evidence inventory is reused in B and deducted from B's effort.

Service Selection Check

Before filling in the form, make sure that A is the right service.

SITUATION	RIGHT SERVICE
A short, statement-based first view of whether the declared AI systems are under control today is wanted	A — Governance Check
A level per dimension (current and target), a search for shadow AI and third-party AI, and a governance matrix are wanted	B — Governance Assessment
A regulatory scope map per system, a closing plan and a gate model sketch by risk class are wanted	B — Governance Assessment
First contact, budget unclear, a quick output is wanted	A — Governance Check
No AI system is in use or planned for production; the question is whether AI can start	AI Readiness Assessment — separate service
A compliance statement, a conformity certificate or a legal opinion is wanted	Not this package — legal / compliance unit or an authorised body
A security, quality or dependency audit of AI-generated code is wanted	Software Audit — separate service
The problem appears to be data quality, the data catalogue or data ownership	Data governance programme / Operational Data Governance Enablement
Validation of the accuracy of statistical models (model validation) is wanted	Not this package — model risk management
Setting up the inventory, writing the policy or setting up the committee is wanted	Follow-on work — inventory set-up, policy and role model

Blocker Checklist

SECTION	BLOCKER QUESTION	ANSWERED?
A	Organisation and legal entities in scope — single company or group	

SECTION	BLOCKER QUESTION	ANSWERED?
B	The decision the assessment will support	
B	Expected output — A or B	
B	No compliance statement or legal opinion expected	
C	Sponsor named	
D	An AI system is in use or planned for production	
D	Names and number of the declared AI systems	
E	Estimated number of people to interview and their distribution across units	
F	Five gate items can be checked per system	
G	Inventory, policy, approval records and role definitions can be shared	

IF A BLOCKER IS MISSING — the proposal is not written. If it has to be written, each missing item is written into section 5 of the proposal as an assumption in place of «assumption — from input form».

The first two rows of section D have a special place: if no AI system is in use, the proposal is not written and AI Readiness is discussed; without the names and number of systems, no band can be selected and the scope of the gate check cannot be written. If the compliance statement expectation in section B applies, the proposal is not written.
