AI Governance Readiness Assessment — Proposal Input Form

Information to be collected in the customer meeting and the proposal field each item fills. Once the form is completed and returned, the proposal text is produced.

Rows marked ● are BLOCKERS — the proposal cannot be written without them and they cannot be filled with assumptions.

If rows marked ○ remain missing, they are written into the proposal as assumptions and go to section 5.

If the answer to a question is “we don’t know”, that is also an answer — it is often the first finding and goes into the proposal as an assumption.

THE NUMBER OF SYSTEMS AND THE INTERVIEW PLAN SET THE SCHEDULE: for each AI system the business owner and the technical owner, and at organisation level the KVKK contact (DPO), legal, risk, information security and internal audit, are interviewed. The main constraint is the calendar of senior management and these units; it cannot be shortened by adding people on the Komtaş side.

The evidence is mostly organisational — documents, inventory records, approval records, interviews. This package has no access model choice. Inventory exports, approval records, incident logs and monitoring dashboards are used as measurement evidence if the customer shares them.

THIS FORM IS FOR SERVICE B — the ten dimensions (D1–D10) are placed on the five-level ladder at organisation level (current and target); the gate is run separately for each AI system in scope; a limited, evidence-based search for shadow AI and third-party AI is made; a risk class with rationale per system, a regulatory scope map, a governance matrix (systems × gate items, with priority), a closing plan (owner, date, dependency), a gate model sketch by risk class and routing are produced. There is no weighted score.

The report opens with a decision sentence, not with a maturity level: “N systems are governed; system X (high risk) is in production without approval and must be closed first by …”

If the customer only wants a short first view of whether the declared systems are under control, the right service is A and A’s own input form is used.

If an A engagement has previously been carried out for this customer, the evidence inventory produced is reused and deducted from B’s effort — this is stated in the proposal.

A. Organisation and Proposal Details

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Organisation and legal entities in scope — single company or group**	Cover, 1. Executive Summary — «CUSTOMER», «legal entities in scope»	
○	Proposal addressee — name, title, unit	Cover, 9. Proposal Terms — «full name», «title»	
○	Proposal date and expected decision date	Cover «dd Month yyyy», 9. validity «proposal date + 1 month»	
●	**Is there an RFP or specification; if so, its number and response format**	Structure of the whole proposal, 2.4 source column «RFP / statement»	
○	Procurement process and approval steps	9. Proposal Terms	

B. Decision — What the Assessment Will Support

The output is not a maturity grade but a decision on which AI systems are under control and which gap is closed first. The assessment measures, it does not build; it is not legal advice and produces no compliance statement.

If this section cannot be answered, the report does not know what to say to whom and the price cannot be defended.

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Which decision will this assessment support — closing an audit finding, answering an EU customer questionnaire, KVKK preparation, informing the board, a new high-risk use, prioritising governance investment**	1. Executive Summary «DECISION», 2.1 Purpose of the Programme	
●	**Does the customer expect a compliance statement, a conformity certificate or a legal opinion — if so, this service does not fit**	2.5 Out of Scope, 3.1 Evidence Model	
○	Is there a triggering document — audit report, customer questionnaire, board request; can it be shared	1. Executive Summary, P1 focus dimensions	
○	Is mapping to ISO/IEC 42001 or NIST AI RMF headings expected (as method, not certification)	3. Methodology, 5.1 Assumptions	
○	How will success be measured — which outcome counts as “done”	1. Executive Summary	

C. Sponsor and Senior Management Access

> This assessment is not carried out without interviewing business owners, technical owners and the control units. If access to the senior management calendar is hard, P1 gets longer; this cannot be compensated by adding people.

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Who is the sponsor — can risk, compliance, the CDO, the CIO or an executive with decision authority be named**	7.3 Governance and Reporting, 5.3 Assumptions	
●	**How will access to the senior management calendar and the AI committee be arranged — easy, medium, hard**	Driver 9, 2.4 «CALENDAR ACCESS», 6. Project Plan, 7.2	
○	Is there an AI committee or governance board; how often does it meet, are decisions recorded	D3 and D4 dimensions, P1 focus	
○	To whom will the report be presented — risk / compliance, senior management, the board, internal audit	1. Executive Summary, 4. Deliverables	

D. AI Systems and Inventory

> The unit of the result is the AI system: each inventory record represents one use. The number of systems in scope is the main sizing driver; narrowing the scope by system is a far more effective schedule lever than reducing the number of dimensions.
>
> If no AI system is in use or planned for production, B is not the right service: the work stops in P0 and AI Readiness Assessment is discussed. The declared list may grow through the shadow AI search in P1.

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Is at least one AI system in use or planned for production — including AI features in vendor products**	Service choice, 2.5 Out of Scope	
●	**Names and number of the declared AI systems — written into the table in the worksheet**	Driver 1, 2.4 «AI SYSTEMS» and «N», 3.3 Prerequisite gate	
○	Is an AI inventory kept; which fields does it have, where is it kept, who updates it	D1 dimension, gate item 1, 5.2 — measurement evidence	
○	Are the systems classified by risk class; who classified them, is the rationale written	D2 dimension, gate item 2	
○	Are any systems, units or legal entities to be left out of scope	2.5 Out of Scope	

E. Scale and Interview Plan

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Estimated number of people to interview and their distribution — business owner, technical owner, KVKK, legal, risk, information security, internal audit**	Driver 3, 2.4 «N», 6. Project Plan, 7.2	
○	Number of business units using AI	Driver 2, 2.4 «N»	
○	Will the work be carried out remotely, on site or hybrid	5.4 «remotely / on site / hybrid»	

F. Dimension Scope

All ten dimensions are in scope by default. If a dimension is left out, the gate item it feeds remains statement-based only; this is written into the proposal as a constraint.

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Are all ten dimensions (D1–D10) in scope; is any dimension to be left out**	2.3 Assessment Dimensions, «OUT-OF-SCOPE DIMENSION»	
○	Is there a dimension that should be examined in particular depth	P1 focus dimensions, 3. Methodology	

G. Shadow AI Search

In most organisations, use outside the inventory exceeds use inside it: individual subscriptions, calls embedded in Excel, AI components inside vendor products. The search in B is limited and evidence-based; only the sources the customer allows are used.

Sources: unit survey, procurement / expense / licence records, SaaS or network logs if shared, AI features of vendor products. Uses found are added to the inventory table with their source; a complete discovery is not committed.

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Can a shadow AI search be made; which sources can be used — unit survey, procurement / expense / licence records, SaaS or network logs**	D1 dimension, 3.2 Process, 5.2 Evidence and access	
○	Is there a rule or ban on general AI tools that employees can use	D3 dimension	
○	In whose name and through which channel can the unit survey be sent	7.2 Expected participation, 6. Project Plan	

H. Third-Party AI

An AI component the organisation did not develop itself and that comes inside a product is also the organisation’s responsibility. The provider’s obligations do not remove the user’s obligations; what each party commits to in the contract is assessed in dimension D9 and in the third gate item.

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Number of third-party / vendor AI components — external model or API, AI feature embedded in a product, AI bought as a service**	Driver 4, 2.4 «N», D9 dimension	
○	Can vendor contracts and data processing annexes be shared	D9 dimension, gate item 3, 5.2	

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
○	Is an AI-specific assessment or questionnaire used in procurement	D9 dimension	

I. Regulation and Legal / Compliance Participation

> The regulatory scope map per system (EU AI Act exposure, KVKK, applicable sector regulator) is written in three-state wording: evidence provided, partial evidence, no evidence produced. Risk classes are indicative; the organisation's legal / compliance unit confirms them. Regulatory dates are reconfirmed at proposal time.
>
> If legal, compliance or the KVKK contact (DPO) will not take part, B is not written: risk classes cannot be confirmed and the third gate item cannot be assessed.

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Degree of regulation — low, medium, high; which regulators (KVKK, BDDK, SPK, Ministry of Health, TCMB, BTK, RTUK)**	Drivers 5 and 7, 2.4 «REGULATION LEVEL», D10 dimension	
●	**Will legal, compliance and the KVKK contact (DPO) take part; who will confirm the risk classes**	D2 and D6 dimensions, 7.2 Expected participation	
○	Are there customers or users in the EU, or systems whose output is used in the EU	Regulatory scope map, 5.1 Assumptions	
○	For systems that process personal data, is a legal basis and, where needed, a DPIA record kept	D6 dimension, gate item 3	

J. Records and Documentation

> The only evidence that a gate works is a rejected request. If approval, incident and monitoring records are shared, they are used as measurement evidence; if not, the related item remains based on documents and interviews.

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Documentation maturity — are the AI policy, role definitions, model / system cards and user notices written, partial or absent**	Driver 8, 2.4 «DOCUMENTATION STATUS», D3 and D5 dimensions	
○	Can approval records be shared; is there a request that was rejected or sent back	D3 dimension, gate item 4, 5.2 — measurement evidence	
○	Are there records of pre-deployment tests, bias analysis and acceptance criteria	D7 dimension	
○	Can incident logs and monitoring dashboards be shared; has a rollback or switch-off ever been used	D8 dimension, gate item 5, 5.2 — measurement evidence	

K. Organisation, Risk and Internal Audit

> The role most often missing is the business owner: the technical owner is usually known, the person who takes on the outcomes of the system is often unclear. Verification in P1 is through a named person and a written assignment.

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
○	Number of legal entities or locations	Driver 6, 2.4 «N»	
○	Will risk management and internal audit take part	D4 and D10 dimensions, 7.2 Expected participation	

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
○	In banking, is there a model risk management (MRM) unit; how will the boundary be drawn	2.5 Out of Scope, D7 dimension	
○	Will information security take part in the interviews	D8 dimension, 7.2 Expected participation	

L. Target Levels and Priority Systems

> The target level is the organisation's decision. If it is not set, it is set jointly in P0; this is written into the proposal as an assumption. Gates get heavier with the risk class: the target for minimal-risk systems is not set as high as for high-risk systems.

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
○	Which system is expected to be addressed first; why	P2 governance matrix, 4. Deliverables	
○	Is there an external date — audit, customer questionnaire, regulatory date	1. Executive Summary — decision sentence, 6. Project Plan	
○	Can a target level (1–5) be set for each of the ten dimensions; who will set it — the answer per dimension goes into the table below	2.3 Assessment Dimensions, P0 deliverable, 5.3	

Target level per dimension. If unknown, leave blank; it is set jointly in P0 and written into the proposal as an assumption.

	DIMENSION	WHERE IT FILLS IN THE PROPOSAL	TARGET LEVEL (1–5) AND WHO SETS IT
○	D1 AI inventory and registration	P0 deliverable, 5.3 Assumptions	
○	D2 Risk classification and impact assessment	P0 deliverable, 5.3 Assumptions	
○	D3 Policy, standards and approval mechanism	P0 deliverable, 5.3 Assumptions	
○	D4 Roles and accountability	P0 deliverable, 5.3 Assumptions	
○	D5 Documentation and transparency	P0 deliverable, 5.3 Assumptions	
○	D6 Data sources, legal basis, copyright and consent	P0 deliverable, 5.3 Assumptions	
○	D7 Testing, bias and acceptance criteria	P0 deliverable, 5.3 Assumptions	
○	D8 Production monitoring and incident management	P0 deliverable, 5.3 Assumptions	
○	D9 Third-party and supply chain AI	P0 deliverable, 5.3 Assumptions	
○	D10 Regulatory tracking and audit readiness	P0 deliverable, 5.3 Assumptions	

M. Previous Work

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
○	Has an AI governance assessment or an AI-related audit been carried out before — yes, partial, no	Driver 10, 2.4 «PREVIOUS ASSESSMENT», 5.1, baseline comparison	
○	Is ISO/IEC 42001 certification intended; is there a timeline	Follow-on work, 2.5 Out of Scope	

N. Commercial Framework

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
○	Is there an approved budget	8. Project Fees — «fee»	
○	Schedule constraint — audit date, questionnaire deadline, board presentation, regulatory date	6. Project Plan	
○	Are there competitors; who — consultancies, law firms, audit firms	Emphasis and section weights	
○	Will inventory set-up, gate design and pilot, or policy and role model work also be discussed after the assessment	2.5 Out of Scope, follow-on proposal	

AI System Inventory — Worksheet

The systems declared in section D are entered here; systems found through the shadow AI and vendor search in P1 are added with the note “found in search”. The provisional risk class is finalised with rationale in P2 and stays indicative until the organisation’s legal / compliance unit confirms it.

#	AI SYSTEM	PURPOSE / DECISION	BUSINESS OWNER	SOURCE	STATUS	PERSONAL DATA	PROVISIONAL RISK CLASS
1							
2							
3							
4							
5							
6							

SOURCE: in-house · vendor · embedded in product. STATUS: idea · development · pilot · production · retired. PERSONAL DATA: yes · special category · no · unknown. PROVISIONAL RISK CLASS: unacceptable · high · limited · minimal; use of a general-purpose model (GPAI) is marked separately. Each row represents one use: if the same model is used for two different purposes, two rows are written.

Prerequisite Gate and Governance Matrix — Worksheet

#	PREREQUISITE	HOW IT IS VERIFIED	IF NOT MET
1	Registered — the system is recorded in an inventory with a named business owner and technical owner	Inventory record or system list; ownership assignment	A system that is not known cannot be governed; it is unclear whom to ask about the other items
2	Classified — purpose and affected decision are written; a risk class is assigned with rationale and date	Risk class field of the inventory record or classification record	Which controls apply cannot be decided; a high-risk use is run as if it were minimal risk
3	Lawful data use — data sources, personal data status and legal basis are written (DPIA where needed); contract constraints are checked for third-party AI	Legal basis record, DPIA, contract review	A system that processes personal data is already within KVKK today; the gap cannot be closed retrospectively
4	Approved with a way back — a named approver approved production use; a human oversight point and a rollback / switch-off plan exist	Approval record or committee decision; rollback plan	The system is in production without approval; it is unclear who would stop it if it fails
5	Monitored — at least one metric is tracked against a threshold; an incident path and a periodic review date exist	Monitoring report or dashboard, incident log, review minutes	A system that is not monitored counts as not in production; problems are learned from users or from audit

The item columns are filled with a first estimate in P0 and with evidence in P2: Met · Partly met · Not met · Not assessed. RESULT: Governed · Partly governed · Not governed. This table is the input to the governance matrix; priority follows risk class and production status.

#	AI SYSTEM	RISK CLASS	1 REGISTERED	2 CLASSIFIED	3 DATA	4 APPROVED	5 MONITORED	RESULT
1								
2								
3								
4								
5								
6								

RESULT RULE — Governed if all five items are met and none is “Not assessed”; Not governed if the system is not registered, has no business owner or is running in production without approval; Partly governed in every other case. A system processing personal data without a written legal basis is never Governed; a high level in the dimensions does not compensate for this.

Every result other than Governed is matched in the closing plan with an owner, a date and a dependency; a gap in a high-risk system goes first.

The gate model sketch scales with the risk class: for a minimal-risk system G1 and G5 are considered sufficient; a high-risk system needs all of the gates G1–G5 and a written conformity assessment.

Band Estimate — Worksheet

Filled in after the answers are collected. The band is the highest band that at least three drivers fall into; a single large driver does not carry the band.

Durations below are for Service B. For A: 1 / 1.5 / 2 weeks (6 / 9 / 12 pd), drivers 1–6 only, own input form.

#	DRIVER	SMALL	MEDIUM	LARGE	RESULTING BAND
1	Number of AI systems in scope	≤ 5	6 – 20	> 20	
2	Number of business units using AI	1 – 2	3 – 6	> 6	
3	Number of people to interview	≤ 10	10 – 25	> 25	
4	Number of third-party / vendor AI components	≤ 3	4 – 10	> 10	
5	Number of applicable regulators	1	2 – 3	> 3	
6	Number of legal entities or locations	1	2 – 3	> 3	
7	Degree of regulation	Low	Medium	High	
8	Current documentation maturity	Written	Partial	None	
9	Access to senior management calendar	Easy	Medium	Hard	
10	Previous assessment or audit	Yes	Partial	No	
	RESULT — selected band and duration	3 weeks · 22 pd	3.5 weeks · 28 pd	4 weeks · 34 pd	

CUSTOMER EFFORT — small 6 days · medium 8 days · large 10 days. The load comes from business owner and technical owner interviews, from KVKK, legal, risk and internal audit interviews and from the shadow AI survey; this expectation is stated explicitly in section 7.2 of the proposal.

PHASE SPLIT (medium band indication) — P0 Scope 2 days · P1 Evidence, inventory discovery and interviews 1–1.5 weeks · P2 Placement, gate and governance matrix 3 days · P3 Closing plan and routing 1 week · P4 Validation and publication 2 days.

The duration is set by the interview calendar and the breadth of the shadow AI search, not by technical measurement. If driver 1, 4 or 9 is large, the schedule gets longer even if the others are small.

KOMTAŞ TEAM — Assessment Lead · AI Governance Consultant · AI / ML Consultant · Regulation and Risk Consultant · Data Architect · Third-Party and Platform Specialist · Organisation Consultant; written in section 7.1 of the proposal.

Service Selection Check

Before filling in the form, make sure that B is the right service.

SITUATION	RIGHT SERVICE
Level per dimension, shadow AI and third-party AI search, governance matrix are wanted	B — Governance Assessment
A regulatory scope map per system, a closing plan and a gate model sketch by risk class are wanted	B — Governance Assessment
Only a short first view of whether the declared systems are under control is wanted	A — Governance Check
No AI system is in use or planned for production; the question is whether AI can start	AI Readiness Assessment — separate service
A compliance statement, a conformity certificate or a legal opinion is wanted	Not this package — legal / compliance unit or an authorised body
A security, quality or dependency audit of AI-generated code is wanted	Software Audit — separate service
The problem appears to be data quality, the data catalogue or data ownership	Data governance programme / Operational Data Governance Enablement
Validation of the accuracy of statistical models (model validation) is wanted	Not this package — model risk management

SITUATION	RIGHT SERVICE
Setting up the inventory, writing the policy, setting up the committee or running the gates is wanted	Follow-on work — inventory set-up, gates and pilot, policy and roles

Blocker Checklist

These rows must be answered before writing the proposal starts.

SECTION	BLOCKER QUESTION	ANSWERED?
A	Organisation and legal entities in scope — single company or group	
A	Is there an RFP or specification; if so, its number and response format	
B	The decision the assessment will support	
B	No compliance statement or legal opinion expected	
C	Sponsor named	
C	Access to senior management calendar and AI committee	
D	An AI system is in use or planned for production	
D	Names and number of the declared AI systems	
E	Number of people to interview and their distribution	
F	Are all ten dimensions (D1–D10) in scope; is any dimension to be left out	
G	Shadow AI search and the sources to be used	
H	Number of third-party / vendor AI components	
I	Degree of regulation and regulators	
I	Legal / compliance / DPO participation confirmed	
J	Documentation maturity — written, partial, none	

IF A BLOCKER IS MISSING — the proposal is not written. If it must be written, each missing item goes into section 5 as an assumption; the scope is reassessed if it does not hold.

Three items cannot be assumed: no AI system in use → AI Readiness; compliance statement or legal opinion expected → not this service; no legal / compliance / DPO participation → no B.
