## AI GOVERNANCE READINESS ASSESSMENT — INFORMATION GATHERING FORM

Information needed to determine the service to be proposed, its scope and duration. Numerical answers may be given as approximate values. The SERVICE column shows which service the question is required for (A · AI Governance Check, B · AI Governance Readiness Assessment).

| # | SECTION | SERVICE | QUESTION | ANSWER | ADDITIONAL NOTES |
|---|---|---|---|---|---|
| 1 | Scope and Expectations | A · B | Which AI systems are in use or running in production in the organisation (including in-house models, LLM-based applications, chatbots and agents, decision support systems and AI features embedded in purchased products); approximately how many are there? Are any systems planned for production? | | |
| 2 | Scope and Expectations | A · B | What decision is this work expected to support, or what need has started it (internal audit finding, supplier assessment questions from customers in the EU, KVKK guides, a board question on the AI systems in use, a new high-risk use, etc.)? By when and by whom is the decision expected to be made? | | |
| 3 | Scope and Expectations | A · B | Which of the following is closest to the expected outcome: a check, based on documents and interviews, of five prerequisites for the AI systems declared by the organisation, with an indicative governance status per system; or current and target level in ten dimensions, a search for use outside the inventory, risk class and regulatory scope per system, a governance matrix and a closing plan? | | |
| 4 | Scope and Expectations | A · B | Is an inventory or register of AI systems kept; if so, what information does it hold (business owner and technical owner, purpose, risk class, data used, approval status, etc.)? | | |
| 5 | Scope and Expectations | A · B | Which business units use AI, and which legal entities and locations are expected to be in scope? | | |
| 6 | Scope and Expectations | A · B | Has a governance, risk, KVKK or information systems assessment or audit covering the AI systems been carried out before; if so, can its results be shared? | | |
| 7 | Scope and Expectations | B | Is there an intent to prepare for ISO/IEC 42001 (AI management system) or a similar framework? | | |
| 8 | Current State | A · B | Which of the AI systems run on vendor models or on AI components inside purchased products; approximately how many such components are there? | | |
| 9 | Current State | B | Can vendor contracts and their clauses on AI components be shared as part of the work? | | |
| 10 | Current State | B | Can a search for AI use outside the inventory (individual subscriptions, calls embedded in documents or spreadsheets, AI features of vendor products) be allowed; which sources can be shared for this purpose (unit survey, procurement, expense or licence records, SaaS or network logs)? | | |
| 11 | Current State | A · B | Is there a defined approval mechanism, AI policy or usage rules for taking AI systems into production? Is there an AI committee or an equivalent governance board? | | |
| 12 | Current State | B | Can approval records, incident records and monitoring records (metric, threshold, periodic review) be shared? | | |
| 13 | Current State | B | Is the documentation on AI policy, role definitions, system documentation and risk classification rules written, partly defined, or not defined? | | |
| 14 | Current State | A · B | Do the AI systems process personal data? Which regulators is the organisation subject to (KVKK, BDDK, SPK, Ministry of Health, TCMB, BTK, RTUK, etc.), and would the degree of regulation be described as low, medium or high? | | |
| 15 | Current State | B | Is the output of any AI system used in the EU, or do customers in the EU ask about AI use in supplier assessments? | | |

| # | SECTION | SERVICE | QUESTION | ANSWER | ADDITIONAL NOTES |
|---|---|---|---|---|---|
| 16 | Ways of Working | A · B | Who is the sponsor of the work (risk, compliance, CDO, CIO or equivalent)? Is access to the calendars of senior management and the business owners of the AI systems easy, medium or hard? | | |
| 17 | Ways of Working | A · B | What is the approximate number of people expected to be interviewed and their distribution (business owners, technical owners, data protection / KVKK contact, legal, risk, information security, internal audit)? | | |
| 18 | Ways of Working | A · B | Can the AI inventory, AI policy, approval records and role definitions be shared as part of the work? | | |
| 19 | Ways of Working | B | Can the legal, compliance, data protection, risk management and internal audit units take part in the work? | | |
| 20 | Ways of Working | A · B | Is the work expected to be carried out remotely, at the customer's premises or in a hybrid way? | | |
| 21 | Ways of Working | A · B | Is there an RFP or specification; how does the procurement process work, and are there any timing constraints (budget period, audit date, management presentation, regulatory deadline, etc.)? | | |

## INFORMATION NOTE

| | |
|---|---|
| **Purpose of the form** | This form has been prepared to collect the information needed to select the service to be proposed under AI Governance Readiness Assessment and to determine the scope, duration and team composition of the work. |
| **Two services** | A — AI Governance Check: a check, based on documents and interviews, of five prerequisites (registered, classified, lawful data use, approved with a way back, monitored) for each AI system declared by the organisation; the result is the status of each item per system, an indicative, statement-based governance status (Governed / Partly governed / Not governed) and a provisional risk class.<br>B — AI Governance Readiness Assessment: current and target level in ten dimensions, a limited, evidence-based search for AI use outside the inventory and for third-party AI components, risk class and regulatory scope per system, a governance matrix and a closing plan.<br>The services are not mandatory continuations of one another; either can be the starting point. |
| **Which question for which service** | The SERVICE column shows which service the question is required for. If the service has not yet been decided, answering all questions is recommended.<br>For A: 1–6, 8, 11, 14, 16–18, 20–21<br>For B: 1–21 |
| **Nature of the answers** | Numerical answers may be given as approximate values; exact figures are not required. Questions whose answers are not known may be left blank. |
| **System access** | Neither service requires access to systems or data content for Komtaş. The work is carried out through documents (AI inventory, AI policy, approval records, role definitions) and interviews.<br>In B, approval, incident and monitoring records, vendor contracts and procurement, licence, SaaS or network logs are used as evidence if the customer team shares them. |
| **List of AI systems** | Each inventory record represents one use: the same model used for two different purposes is assessed as two separate systems. AI features embedded in purchased products are included in the list. A covers only the systems the organisation declares; the search for use outside the inventory is part of B. If no AI system is in use or planned for production, AI Readiness Assessment, a separate service, is the more suitable one. |
| **Questions left blank** | Every topic left unanswered is stated as an assumption in the proposal. If the assumption does not hold, the scope and duration are re-evaluated. If interviews cannot take place on time, the related findings are reported as statement-based. |
| **Not asked in this form** | Assessment dimensions, prerequisite items, target maturity levels and the methodology to be applied are not asked in this form. These are proposed by Komtaş based on the answers given, presented in the proposal and finalised jointly at the start of the work. A legal opinion or compliance statement, inventory set-up and policy writing, model validation, data quality measurement, security testing and code audit are not within the scope of the assessment. Risk classes are indicative until confirmed by the organisation’s legal and compliance unit. |
| **Confidentiality** | The information shared is used only for preparing the proposal and is not shared with third parties. |
