AI & AGENTIC READINESS · v2

AI & Agentic Readiness Check and Assessment — blueprint

Internal reference: services, method, sizing and proposal set. Readiness for AI use cases including generative AI, LLM and agentic systems, and classic ML where relevant. A decision per use case — no single grade. Framework: Komtaş Enterprise Readiness Playbook / Grounded Intelligence Readiness Framework (AI team).

1 **Where it sits** — 360 architecture; readiness versus platform assessment; seven recurring patterns; GenAI and agentic failure modes. — p. 2 – 7

2 **Two services** — Readiness Check and Readiness Assessment; six gate items mapped to the eight dimensions. — p. 8 – 12

3 **Method** — D1–D8, old-to-new map, L1–L4, evidence, phases, gate and gap types, matrix, readiness summary, routing, Grounded Intelligence. — p. 13 – 26

4 **Komtaş side** — Roles, duration, effort and sizing, deliverables, framework source and sector annexes, limits, files, open items. — p. 27 – 33

SECTION 1

Where It Sits

Where AI & agentic readiness sits in the data and AI value proposition, how it differs from a platform assessment, the patterns and failure modes it is built to show.

One question, four layers p. 3

AI value proposition in detail p. 4

Readiness assessment, not a platform assessment p. 5

Seven recurring patterns in AI initiatives p. 6

GenAI and agentic failure modes; principles p. 7

Where It Sits — One Question, Four Layers

KOMTAS

A use case lives in the top two layers; its answer is built from the two below. These services check, per use case, whether the layers below are ready.

01 · WHY IT MATTERS

"Which open complaints are at risk of breaching the SLA this week?"

"37 complaints; 12 wait on the same supplier."
ranked from records the agent may read; an owner acts on the list

TARGET

Action 360
Intelligent Work Experience

Where the question is asked and the answer lands: Teams, Slack, portal, API.

Agent 360
Governed Digital Workforce

Turns the question into a query, ranks the complaints and proposes the action.

PREREQUISITE

Context 360
Enterprise Context

Says what "complaint" and "at risk" mean: glossary, semantic layer, ontology.

Data / Analytic 360
Trusted Data Foundation

Holds and serves the complaint records; access must be granted for this use case.

The answer travels back up — it is only as good as the two layers below

WHERE AN UNREADY USE CASE SHOWS UP IN THE ANSWER

Nobody acts on the list

No owner on the business side; the process does not change.

D1 · Owner

Pilot works, never deployed

No path to production; the answer stays in a demo.

D7 · Lifecycle

"Complaint" means three things

Three systems count it differently; the agent picks one.

D3 · Knowledge

Data exists, access does not

Approval for the complaint records takes three months.

D3 · Data access

Where This Assessment Sits — AI Value Proposition

KOMTAS

The assessment does not measure one layer. It asks whether the bottom two layers are ready for work to be done in the top two.

Action 360

Intelligent Work Experience

TARGET

Teams | Slack | WhatsApp | Web / Portal | Claude Desktop | API, Headless

Agent 360

Governed Digital Workforce

TARGET

INDUSTRY: Manufacturing | Retail | Banking | Energy | Aviation | Other

FUNCTION: Customer Service | Sales | Finance | Procurement | Operations | Other

Context 360

Enterprise Context

PREREQUISITE

Semantic Layer | Ontology | Knowledge Graph | Master Data | Corporate Memory

Data / Analytic 360

Trusted Data Foundation

PREREQUISITE

Lakehouse | Datawarehouse | Integration | Data Virtualization | Governance / MDM | Access Control

The most frequent finding is that the gap sits not on the AI side but in the two layers below. The roadmap then starts with data, not with AI.

LOGIC OF THE ASSESSMENT

Top two layers — the target

The assessment asks whether what a use case needs in the agent and application layers is in place.

Bottom two layers — the prerequisite

If the data foundation and the context layer are not ready, the use case does not start; that is a data finding, not an AI finding.

Routing

Weak context leads to ontology / knowledge graph work; a weak data foundation to a Lakehouse / DWH Assessment or Data Modernization.

A Readiness Assessment, Not a Platform Assessment

KOMTAS

Both use the same family spine; their questions, evidence and outputs differ

	PLATFORM ASSESSMENT	READINESS ASSESSMENT
What is assessed	A system that is built and running	Prerequisites of a capability not yet in place
Core question	At what maturity does this system run?	Which use case can start, and if not, why?
Main evidence	Logs, configuration, platform measurement	Use case documents, role definitions, decision records, interviews
Main output	Gap per dimension and an improvement roadmap	A start decision per use case and a prerequisite list
Result	Current and target level per dimension	Ready to start / conditional / not ready per use case — no score
Extra component	—	Six-item gate and gap types: no pilot with a Blocking gap, whatever the levels
Services	Lakehouse, DWH, BI Assessment	A Readiness Check 1 – 2 weeks · B Readiness Assessment 3 – 4 weeks
Main audience	Platform owner, data team manager	CDO, CTO, business unit managers, use case owners

WHY A SEPARATE VARIANT IS NEEDED

Placing a capability not yet built on a maturity ladder puts every dimension at the bottom and tells the organisation, at a cost, what it already knows.
Readiness uses its own four-level ladder (L1 Exploratory – L4 Scalable): how close a use case is to pilot, production and scale.

THE SPINE DOES NOT CHANGE

The evidence model, the P0 – P4 phases, the band rule and the package structure are the same across the assessment family.
Dimensions and ladder come from the AI team's framework (D1–D8, L1–L4), so the readiness result and Grounded Intelligence delivery speak one language.

Seven Recurring Patterns in AI Initiatives

KOMTAS

Each is measurable; the assessment is not done to spot them but to show them with evidence

PoC graveyard

Pilots end successfully and none reaches production. The problem is not the model but a path to production that was never defined.

Measured: pilots started, share reaching production, reasons for not reaching it

An idea list, not use cases

There are hundreds of “AI opportunities”; none has an owner, a measurable outcome and accessible data. Ideas abound; use cases do not.

Measured: share of candidates with an owner, a measure and accessible data

Data assumed ready

The data “exists”; when access is requested, approval takes months or the data is not in the expected form.

Measured: time to access the data sets each use case needs, and share actually obtained

Tool bought, problem not defined

A platform or licence is bought and the problem it should solve is looked for afterwards. The investment is made; no value follows.

Measured: usage of tools bought and number of use cases linked to them

Model without an owner

A model goes into production but the process that should use its output does not change. Nobody decides based on it.

Measured: number of processes in which model output enters a decision

No success measure

Whether the initiative succeeded is debated, because what should happen was never written down before it started.

Measured: share of initiatives with a measurable target defined at the start

Governance added afterwards

Inventory, approval and monitoring are set up only after the first systems are in production; they cannot be applied retroactively.

Measured: share of AI systems in production recorded in an inventory

ALL SEVEN ARE INSTITUTIONAL, NOT TECHNICAL

Readiness is the binding constraint. All seven arise because something that should be written down before the start was not:
the owner, the decision role, the success measure, data access, the path to production and responsibility. The assessment asks for each in turn.

GenAI and Agentic Failure Modes

KOMTAS

Most failures are institutional, not technical: readiness is the binding constraint. These failure modes are manageable through design, which is why readiness is checked before build.

01 · WHY IT MATTERS

Hallucination / unsupported claims

Content not derived from the evidence given: invented facts, references or steps

D4 · D7

False consistency

Conflicting evidence turned into a coherent story that hides the conflict

D3

Weak numerical reasoning

Magnitudes or significance misread; wrong numbers survive review

D4

Prompt sensitivity

Small changes in framing or context change the output materially

D5 · D7

Prompt injection

Text in inputs or retrieved documents overrides system instructions

D6

Automation bias / overtrust

Polished outputs accepted without scrutiny; human review becomes nominal

D2 · D8

Retrieval failure

Stale, partial or irrelevant documents retrieved with no signal of the gap

D3 · D5

Drift and degradation

Quality declines as corpus, prompts or models change without re-validation

D7

PRINCIPLES THE ASSESSMENT CHECKS FOR

Human authority for consequential decisions

The system may inform, draft, challenge or recommend; it does not decide where the stakes are material.

Grounding is a design requirement

Every output is tied to attributable evidence; gaps are flagged, not filled with plausible text.

Complexity must be earned

The simplest architecture that safely delivers; agentic orchestration only where a deterministic workflow is not enough.

Tags show the dimension where each mode is checked. In the customer deck this content is one slide; the tags are internal.

SECTION 2

Two Services

AI & Agentic Readiness Check and Assessment — what each covers, how long it takes, and how the six gate items map to the eight dimensions.

Which one fits p. 9

A · AI & Agentic Readiness Check p. 10

B · AI & Agentic Readiness Assessment p. 11

Gate items mapped to the eight dimensions p. 12

Two Services — Which One Fits

KOMTAS

Readiness for AI use cases including generative AI, LLM and agentic systems, and classic ML where relevant. Each service can be taken on its own.

02 · TWO SERVICES

p. 10

A AI & Agentic Readiness Check

Six-item gate per use case · documents and interviews

Focus	Six prerequisites, checked per use case
Scope	6 gate items for each candidate use case; gaps typed Blocking / Manageable
Result	Met / partly met / not met; indicative result per use case
Access	None · documents and interviews only
Effort	Komtaş 6 · 9 · 12 pd · customer 3 · 4 · 5 days
Evidence	Statement · Document · Observation · Measurement
Weeks	S 1 · M 1.5 · L 2

p. 11

B AI & Agentic Readiness Assessment

Decision per use case · readiness summary and phase gates

Focus	Readiness matrix, readiness summary and handovers
Scope	8 dimensions D1–D8 on L1–L4, current and target; per use case where relevant
Result	Ladder, gate and gap types per use case, matrix with earliest start
Access	None · documents, interviews, observation; AI inventory and platform counts if shared
Effort	Komtaş 22 · 28 · 34 pd · customer 6 · 8 · 10 days
Evidence	Statement · Document · Observation · Measurement
Weeks	S 3 · M 3.5 · L 4

WHICH ONE FITS · THE QUESTION ON THE TABLE DECIDES

Is a quick, documented view needed of whether named candidate use cases meet the six prerequisites? → A

Is a decision per use case needed — with earliest start, a readiness summary tied to phase gates and handovers? → B

A · AI & Agentic Readiness Check

Six-item gate per use case · documents and interviews.

KOMTAS

02 · TWO SERVICES · A

A

AI & Agentic Readiness Check

Six prerequisites, checked per use case

WEEKS S · M · L	KOMTAŞ EFFORT person-days	CUSTOMER days
1 · 1.5 · 2	6 · 9 · 12	3 · 4 · 5

WHAT IS CHECKED · 6 GATE ITEMS PER CANDIDATE USE CASE · «USE CASES»

1 Defined use case

Owner, measurable outcome and data need written down for the candidate

D1

2 Real data access

Access to the data the use case needs has been granted — knowing the data exists is not enough

D3

3 Decision-making owner

A business-side person with authority to decide scope and acceptance

D1 · D8

4 Path to production

Where the model or agent will run, how it is monitored and who operates it

D5 · D7

5 Legal basis

Where personal or regulated data is used, the legal basis for that use exists

D6

6 Decision role and autonomy boundary

Which outputs inform, draft or recommend, which require human review, and who decides

D2 NEW

HOW IT IS ASSESSED

Four statuses per gate item and use case

- Met
- Partly met
- Not met
- Not assessed

Each gap typed Blocking or Manageable; indicative result per use case, marked statement-based.

WHAT YOU GET

- Gate status per use case, item by item
- Each gap typed Blocking or Manageable; indicative result
- Key risks, each with its evidence
- Recommended next step, incl. whether B is worth taking

No ladder, no score, no readiness summary. No system access. If no candidate use case has an owner, P0 stops the work.

B · AI & Agentic Readiness Assessment

Decision per use case · readiness summary and phase gates.

02 · TWO SERVICES · B

B

AI & Agentic Readiness Assessment

Readiness matrix, readiness summary and handovers

WEEKS S · M · L	KOMTAŞ EFFORT person-days	CUSTOMER days
3 · 3.5 · 4	22 · 28 · 34	6 · 8 · 10

WHAT IS ASSESSED · 8 DIMENSIONS D1–D8, PER USE CASE WHERE RELEVANT

D1 Strategic & Business Readiness
Problem, owner, value, baseline, why AI

D2 Decision Process & Functional Readiness
Decision role, decision rights, review, autonomy

D3 Data & Knowledge Readiness
Data access, text evidence, documents, glossary

D4 Analytical Grounding Readiness
Scores, reason codes, confidence, data foundation

D5 Architecture, Technology & Integration Readiness
Model strategy, RAG, prompts, integration, cost

D6 Security, Governance & Control Readiness
Inventory, risk tiering, guardrails, KVKK, audit

D7 Operating Model, Validation & Lifecycle Readiness
Owners, evaluation corpus, validation, monitoring

D8 People, Adoption & Change Readiness
Skills, SMEs, trust calibration, change

HOW IT IS ASSESSED

Current and target level per dimension

L1 | L2 | L3 | L4 — current: L1, target: L2

Then the six-item gate and gap types per use case, and the matrix: ready to start, conditional or not ready.

WHAT YOU GET

- Eight dimensions on L1–L4, current and target
- Gate, gap types and matrix with earliest start
- Readiness summary per use case, tied to phase gates
- Handovers and routing; Grounded Intelligence pilot

No weighted score, no institution-level aggregate. AI inventory, pilot and production counts and platform usage are used as measurement where shared.

Gate Items Mapped to the Eight Dimensions

KOMTAS

A checks the six gate items, which touch seven of the eight dimensions. B places all eight on L1–L4 and runs the same gate with deeper evidence, so A's result carries into B.

DIMENSION	A · GATE ITEM	EVIDENCE IN A · DOCUMENTS, INTERVIEWS	EVIDENCE IN B · DEEPER, PER USE CASE
D1 **Strategic & Business Readiness**	1 · 3 Use case · owner	Use case document, owner interview	Problem, owner, value, baseline and why AI traced per candidate
D2 **Decision Process & Functional Readiness**	6 Decision role, autonomy	Decision-rights note or statement	Decision chain, review checkpoints, override and referral flows per use case
D3 **Data & Knowledge Readiness**	2 Data access	Access request record or statement	Access time; text evidence sample; document versioning; source authority
D4 **Analytical Grounding Readiness**	*Not checked in A*	—	Scores and reason codes at time of use; freshness; the feeding warehouse / lakehouse
D5 **Architecture, Technology & Integration Readiness**	4 Path to production	Platform description, statement of the path	Model strategy, RAG and retrieval testing, integration, environments, cost
D6 **Security, Governance & Control Readiness**	5 Legal basis	Written legal or compliance opinion	Inventory, risk tiering, guardrails, change control, audit logging, KVKK
D7 **Operating Model, Validation & Lifecycle Readiness**	4 Path to production	Statement of who runs and monitors it	Owner roles; evaluation corpus exists / planned / missing; monitoring
D8 **People, Adoption & Change Readiness**	3 Decision-making owner	Assignment letter, business unit interview	SME involvement, trust calibration, change capacity, leadership alignment
EVIDENCE DEPTH		Documents and interviews — no system access	Plus end-to-end observation and, where shared, AI inventory, pilot and platform counts
RESULT FORMAT		Status per item; gap type; indicative result	L1–L4 per dimension; gate; matrix; readiness summary

A covers the six gate items for every use case named in «USE CASES»; D4 is not checked in A. A dimension left out of B's scope is named in the proposal as «OUT-OF-SCOPE DIMENSION» (4b).

SECTION 3

Method

The eight dimensions, the L1–L4 ladder, the evidence rules, the phases, the six-item gate and gap types, the readiness matrix and summary, results, routing and the follow-on.

Eight dimensions · old-to-new mapping · L1–L4 ladder · evidence model — p. 14 – 17

How it is run · phase rules — p. 18 – 19

Six-item gate · readiness matrix · readiness summary and phase gates — p. 20 – 22

Result format · report contents · routing — p. 23 – 25

After readiness: Grounded Intelligence — p. 26

Eight Dimensions

KOMTAS

The checklist behind B. Each dimension is placed on L1–L4, per use case where relevant; seven of them carry the gate items that A checks. There are no weights and no score.

	DIMENSION	TOPICS COVERED
D1	**Strategic & Business Readiness**	Bounded problem statement, named business owner, quantified value, baseline and success metric; why AI / GenAI rather than a conventional analytical or rules solution; realistic expectations
D2	**Decision Process & Functional Readiness**	Role in the decision chain (Inform · Draft · Challenge · Recommend · Route / Execute), decision rights, designed human review checkpoints with override logging, explicit autonomy boundary, exception / override / referral flows
D3	**Data & Knowledge Readiness**	Structured data access and quality; text evidence audited for completeness and specificity; policy and reference documents versioned and retired; source authority hierarchy and conflict protocol; multimodal evidence; institutional knowledge documented; business glossary, master data, semantic layer
D4	**Analytical Grounding Readiness**	Model scores, signals and diagnostics available at time of use with freshness and coverage; contribution factors / reason codes; thin-evidence handling and confidence communication; model outputs kept separate from LLM interpretation; the warehouse / lakehouse that feeds them
D5	**Architecture, Technology & Integration Readiness**	Proportional architecture (complexity must be earned); model strategy (hosted / private / SLM / fine-tuning); RAG design and retrieval quality testing; prompts as governed configuration; agentic orchestration only where a deterministic workflow is not enough; source system APIs and write-back; deployment environment; memory design; compute and cost visibility
D6	**Security, Governance & Control Readiness**	AI inventory, approval and risk tiering; model risk management extended to generative systems; guardrail layers; prompt injection testing; change control for prompts, retrieval and models; audit logging; third-party model risk; legal basis for personal data (KVKK); sector regulation
D7	**Operating Model, Validation & Lifecycle Readiness**	Ownership roles (product, technical, content, validation, business, governance owner); evaluation corpus as a prerequisite; validation of generative outputs (retrieval, grounding, completeness, consistency, business harm modes, usefulness); monitoring and drift; governed feedback loop; MLOps for ML models
D8	**People, Adoption & Change Readiness**	Skills and roles, SMEs as design partners, trust calibration, automation bias, change management, leadership alignment

ORDER INSIDE B Business and decision first (D1, D2), then data and knowledge (D3), then D4, D5 and D6 in parallel; D7 and D8 run throughout. However strong the rest, without D1 and D2 there is nothing to start.

Framework: Komtaş Enterprise Readiness Playbook / Grounded Intelligence Readiness Framework (AI team)

Old to New — A1–A10 Mapped to D1–D8

KOMTAS

Internal only. v2 adopts the AI team's eight dimensions; every v1 topic is kept and placed. D2 and D4 are new. Customer files use D1–D8 only.

NEW DIMENSION (v2)	WAS (v1)	WHAT CHANGED
D1 **Strategic & Business Readiness**	A1 Use case portfolio & value definition	Adds why AI / GenAI rather than a conventional solution, baseline metric and realistic expectations
D2 **Decision Process & Functional Readiness**	— **new**	Decision chain role, decision rights, review checkpoints, autonomy boundary; carries the new gate item 6
D3 **Data & Knowledge Readiness**	A2 Data accessibility & quality + A4 Context & knowledge layer	Adds text evidence audit, document versioning and retirement, source authority and conflict protocol, multimodal evidence
D4 **Analytical Grounding Readiness**	— **new; absorbs the data-foundation part of A3**	Scores, reason codes and confidence at time of use; the warehouse / lakehouse that feeds them
D5 **Architecture, Technology & Integration Readiness**	A5 Platform & infrastructure + integration part of A3	Adds model strategy, RAG and retrieval testing, prompts as configuration, agentic proportionality, write-back
D6 **Security, Governance & Control Readiness**	A8 Governance & risk + A9 Security, privacy & regulation	Adds MRM extension, guardrails, prompt injection testing, change control; AI governance depth stays with AI Governance Readiness
D7 **Operating Model, Validation & Lifecycle Readiness**	A6 Model & agent lifecycle	Adds ownership roles, evaluation corpus, validation of generative outputs, governed feedback loop
D8 **People, Adoption & Change Readiness**	A7 Skills & organisation + A10 Adoption & change management	Adds SMEs as design partners, trust calibration, automation bias

v1 CODE → v2 CODE

A1 → D1	A2 → D3	A3 → D4 · D5	A4 → D3	A5 → D5	A6 → D7	A7 → D8	A8 → D6	A9 → D6	A10 → D8

Gate items 1–5 are unchanged; item 6 is new. Teklif Seti codes S1–S14 are unchanged; their texts now say eight dimensions and six gate items.

Four-Level Readiness Ladder — L1 to L4

KOMTAS

Used in B: each dimension gets a current and a target level, per use case where relevant. A uses no ladder. Without evidence, one level lower is recorded.

L1 Exploratory

Interest exists, but no governed use case, business ownership or operating model

- Use cases driven by technology interest or competitive pressure
- No named business owner, no baseline metric
- Data, governance and operating model not addressed

Readiness work before any pilot

L2 Pilot Ready

Specific bounded use case with business ownership, data access and entry-level governance controls

- Problem bounded, owner named, baseline defined
- Data quality known for the pilot scope; decision rights documented
- Evaluation corpus begun; entry-level operating model

Gates: Approve development · Launch controlled pilot

L3 Production Ready

Governed solution operating in live workflow with validation, monitoring and clear accountability

- Pilot validated against quality metrics
- Governance and security approvals obtained; monitoring live
- Operating model resourced; evaluation corpus complete

Gate: Transition to production

L4 Scalable

Architecture and governance extend to adjacent use cases without rebuilding from scratch

- Patterns documented and reusable
- Governance approvable for expansion
- No unresolved Blocking gap from the first use case

Gate: Scale to adjacent use cases

READINESS IS USE-CASE SPECIFIC

No institution-level aggregate and no weighted score. A use case can be L3 on D1 and L1 on D3 while another is the reverse. Organisation-wide dimensions (often D5, D6) are recorded once; D1–D4 per use case where they differ. A level alone does not decide: the gate does.

THE TARGET LEVEL IS THE ORGANISATION'S DECISION

For a first use case the target is usually L2 in every dimension (controlled pilot); L3 where the decision is to go live. L4 only makes sense once one use case runs in production. Replaces the five-level ladder of v1.

Evidence Model

KOMTAS

Each finding is tied to an evidence type and shown in the report. In readiness most evidence is organisational, which makes showing the type even more important.

MEASUREMENT
Measurement

A number from systems — B only, if shared

· AI inventory records, pilot and production counts, platform usage, access-request times

Highest confidence

DOCUMENT
Document

An existing document or record

· Use case document, policy, decision-rights note, architecture, evaluation corpus, data-sharing approval

High confidence · currency checked

OBSERVATION
Observation

A process followed end to end — B

· One use case followed from idea to today, one access approval tracked, one deployment

Medium confidence · one-off observation

STATEMENT
Statement

What people say

· Use case owner, business unit and team interviews, workshop outputs

Low confidence · cannot confirm a level alone

THREE-STATE EVIDENCE SCALE

Evidence provided
Level or gate item shown by a document or measurement

Partial evidence
Evidence exists, but its scope is narrow or its currency unclear

Evidence could not be produced
Not recorded — this is itself a finding

THE MOST FREQUENTLY CHECKED STATEMENT IS DATA ACCESS

"We have that data" is heard in almost every organisation. It is checked with one question: has access been granted for this use case, and which record shows it? If no access record or sample data can be shown, the item is marked statement-based.

"NOT RECORDED" IS AN ANSWER

If pilot counts, access times or an AI inventory are not recorded, that is not a measurement gap but an organisational finding. The report does not fill it with an estimate; it states that no record is kept and sets the level accordingly.

How It Is Run — One Method, Two Depths

KOMTAS

The same evidence types, gate and phases are used in both services. The service sets how deep the evidence goes and how long each phase takes.

03 · HOW IT IS RUN

FOUR KINDS OF EVIDENCE

Measurement
B

AI inventory, pilot and production counts, platform usage — if shared

Document
A · B

Use case document, policy, role definition, data-sharing approval

Observation
B

One use case followed from idea to today

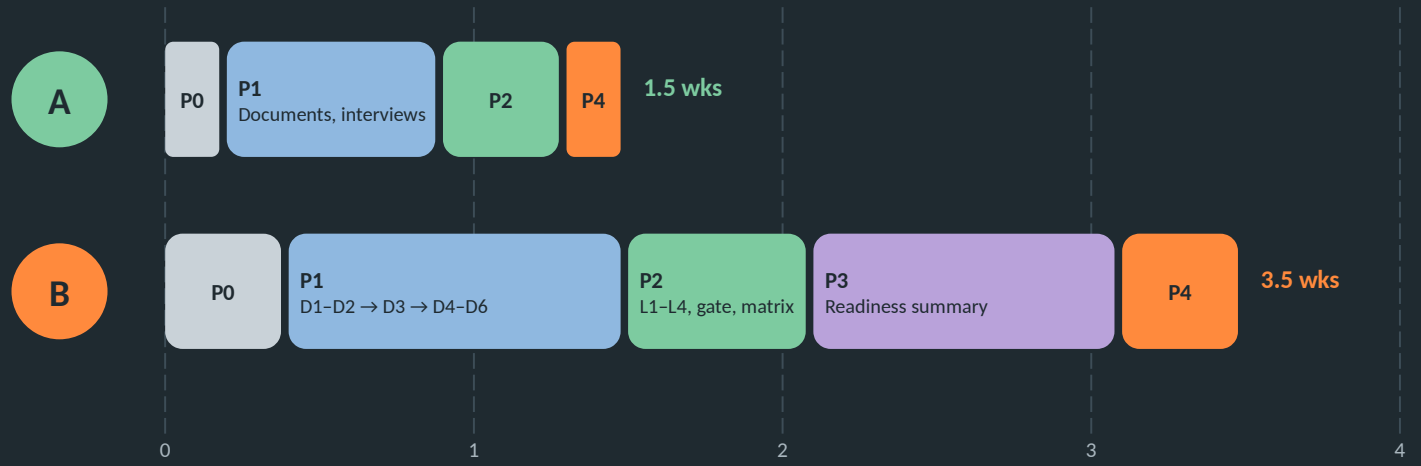

Statement
A · B

What a manager or team says — recorded as a claim

A gate item is “met” only where a document or an observation supports it; every gap is typed Blocking or Manageable. In A, results rest mostly on statements and are marked as such.

Use case count sets the calendar. Each candidate needs its owner, the data team and, for personal data, legal; adding people does not shorten it.

PHASES BY SERVICE · M BAND, IN WEEKS

B's P1 follows the framework's order: business and decision first, then data and knowledge, then grounding, architecture and governance in parallel; D7–D8 throughout. P3 (B only): readiness summary per use case, tied to phase gates.

WHO DOES THE WORK

A — Assessment lead · AI / ML consultant · data architect

B — As A, plus context and governance consultants · platform specialist, change management on call; AI team reviewer for D4–D7

EVIDENCE BY SERVICE

A — No system access. Use case documents, policies, role definitions and AI inventory, plus interviews per use case.

B — No access model. Adds end-to-end observation and, where the customer shares them, AI inventory, pilot and platform counts.

Process — P0 to P4

KOMTAS

Five phases, each with a written rule. A runs P0, P1, P2 and P4; P3 is B only. Phase length changes with the band, phase content does not.

P0 · Scope
A 1 day · B 2 days

- Candidate use cases and their owners named («USE CASES»)
- Business units and people to interview set
- Interview calendar per use case — business and decision first
- B: target level (L1–L4) per dimension agreed in writing

PHASE RULE
No work starts without a candidate use case that has an owner; if there is none, P0 stops the work

P1 · Evidence and interviews
A 3–4 days · B 1–1.5 wks

- B order: D1–D2, then D3, then D4–D6 in parallel; D7–D8 throughout
- Use case documents, policies, decision-rights notes, AI inventory
- B: pilot records, platform usage, evaluation corpus status if shared
- B: one use case followed from idea to today

PHASE RULE
Each item is typed as measurement · document · observation · statement and the type is recorded

P2 · Gate and placement
A 2 days · B 3 days

- Six-item gate per use case; each gap typed Blocking or Manageable
- A: indicative result per use case and report
- B: D1–D8 placed on L1–L4, current and target
- B: readiness matrix with earliest start

PHASE RULE
The gate is run for each use case separately; the organisation gets no single readiness grade

P3 · Readiness summary and handovers
B only · 1 week

- Readiness summary per use case: state, gaps, type, action, owner, date
- Each step tied to a phase gate, Blocking gaps first
- Items handed to lower layers — data, context
- Use cases deferred on purpose, with rationale

PHASE RULE
Every gap is tied to an owner, a date and a phase gate; one without an owner does not close

P4 · Validation and release
A 1 day · B 2 days

- Factual review with use case owners and business units
- Objections recorded next to the finding
- Report released with scope and evidence gaps
- Baseline retained for the next assessment

PHASE RULE
An objection is not resolved away; “we have that data” is recorded with the access evidence

PEOPLE, NOT ACCESS, DRIVE THE SCHEDULE

P1 grows with the candidate use cases; each needs its owner, the data team and, where personal data is used, legal or compliance. Narrowing the use case list is therefore a far stronger schedule lever than dropping dimensions.

NO USE CASE WITH AN OWNER, NO ASSESSMENT (P0)

If P0 finds no candidate use case with a named owner, the work stops there. Defining use cases is a separate workshop, proposed separately; assessing readiness without a use case produces no decision.

Prerequisite Gate — Six Items

KOMTAS

Run per use case in both services. Independent of the ladder: an unmet prerequisite cannot be offset by high levels elsewhere.

	PREREQUISITE	WHAT IT MEANS	HOW IT IS VERIFIED	IF NOT MET
1	**Defined use case** D1	Owner, measurable outcome and data need written down for the candidate	Use case document or written definition	There is no readiness to assess; the work turns into a use case definition workshop
2	**Real data access** D3	Access to the data the use case needs has been granted — knowing the data exists is not enough	Access request record or sample data	No start date can be given; access may take longer than the project itself
3	**Decision-making owner** D1 · D8	A business-side person with authority to decide scope and acceptance	Assignment letter or written mandate	The initiative becomes an internal IT project and the process does not change
4	**Path to production** D5 · D7	Where the model or agent will run, how it is monitored and who operates it	Platform description or service agreement	The pilot succeeds and never reaches production — the most common failure
5	**Legal basis** D6	Where personal or regulated data is used, the legal basis for that use exists	Written opinion of legal or compliance	The initiative stops at deployment; this cannot be fixed afterwards
6	**Decision role and autonomy boundary** D2 · new	Which outputs inform, draft or recommend, which require human review, and who decides	Decision-rights note or process design showing review checkpoints	Oversight exists only on paper; the system drifts from informing to effectively deciding

GAP TYPE · EVERY GAP IS CLASSIFIED

Blocking must be closed before any pilot.

Manageable a pilot is possible with a compensating control and monitoring.

Not met → always Blocking. Partly met / Not assessed → Blocking or Manageable on the evidence; a missing owner or missing legal basis is always Blocking. Gaps in the dimensions (B) are typed the same way.

USE CASE RESULT RULE

Any Blocking gap → **Not ready**

Only Manageable gaps → **Conditional**

No gap and no item left Not assessed → **Ready to start**

Four statuses per item: Met, Partly met, Not met, Not assessed. “Not assessed” is never counted as met.

Use Case Readiness Matrix

KOMTAS

The main output of B: which use case can start when, and what is missing. Illustrative example; A produces the same rows as an indicative, statement-based view.

USE CASE	DEFINED	DATA	OWNER	PRODUCTION	LEGAL	DECISION ROLE	GAPS	RESULT	EARLIEST START
Invoice matching	Met	Met	Met	Met	Met	Met	—	Ready to start	Q1 · pilot
Complaint triage	Met	Partly	Met	Met	Met	Partly	2 M	Conditional	Q2 · access, review step
Credit document review	Met	Met	Met	Met	Met	Not met	1 B	Not ready	After decision-rights design
Churn prediction	Met	Not met	Met	Not met	Met	Partly	2 B · 1 M	Not ready	After data foundation work
Internal knowledge assistant	Met	Met	Met	Partly	Not assessed	Met	1 B · 1 M	Not ready	After legal opinion

GAPS: B = Blocking, M = Manageable. Not met is always Blocking; a missing owner or missing legal basis is always Blocking.

THREE RESULTS

READY TO START

No gap — all six items met

- Scope and acceptance criterion can be written
- A start date can be given
- Default next step: Grounded Intelligence pilot

CONDITIONAL

Only Manageable gaps

- Pilot possible with compensating control and monitoring
- Each gap gets an owner, a date and a phase gate
- Start date firms up as gaps close

NOT READY

At least one Blocking gap

- Blocking gap closed before any pilot
- Often in a lower layer — data or context
- Use case deferred; another candidate moves up

WHY NO SINGLE READINESS GRADE IS PRODUCED

“The organisation's AI readiness is 2.8 / 5” serves no decision. The same organisation can start one use case tomorrow and not start another for six months. No use case coming out ready is also a result.

Readiness Summary per Use Case — the Closing Plan

KOMTAS

B's closing plan is written in the AI team's readiness summary form, one per use case, and each step is tied to a phase gate. Illustrative rows for one use case.

USE CASE · Internal knowledge assistant · target L2 (controlled pilot) · result: Not ready, 1 Blocking gap

DIMENSION	CURRENT	PRIMARY GAPS	GAP TYPE	RECOMMENDED ACTION	OWNER	TARGET DATE	PHASE GATE
D2	L2	None: role agreed as Inform, citations required	—	—	Business owner	—	—
D6	L1	Legal basis for using internal documents not assessed	Blocking	Written KVKK opinion	Legal	M+1	Launch controlled pilot
D3	L2	Superseded policies still in the document set	Manageable	Retire old versions; set a version rule	Content owner	M+1	Launch controlled pilot
D8	L1	Users not trained on the system's failure modes	Manageable	Trust calibration sessions with failure examples	Business unit	M+2	Launch controlled pilot
D5	L2	Hosted or private model not decided	Manageable	Pilot in the approved environment; decide before production	IT	M+2	Transition to production
D7	L1	Evaluation corpus missing	Manageable	Start the corpus with SMEs; complete before production	Validation owner	M+3	Transition to production

Any dimension without a gap is still listed with its current state. Blocking gaps are closed before “Launch controlled pilot”; Manageable gaps carry a compensating control and monitoring.

PHASE GATES · EACH CLOSING STEP IS TIED TO ONE

1 Approve development

Business and decision readiness confirmed; use case bounded; owner named; conventional alternatives evaluated

→

2 Launch controlled pilot

Data quality confirmed for pilot scope; basic governance and security design; evaluation corpus begun; decision rights documented

→

3 Transition to production

Pilot validated against quality metrics; governance and security approvals; operating model resourced; corpus complete; monitoring live

→

4 Scale to adjacent use cases

Patterns documented and reusable; governance approvable for expansion; no unresolved Blocking gap

EVALUATION CORPUS IS ASSESSED, NOT BUILT

Recorded per use case as exists / planned / missing. Building it belongs to the pilot. The readiness summary is the closing plan: no separate plan document is produced.

Result Format by Service

KOMTAS

How a result is expressed differs by service. Neither service gives the organisation a single maturity grade or score.

03 · METHOD · RESULT FORMAT

A — Status per gate item and use case

Met	A document or record shows the item is in place for this use case.
Partly met	In place in part, or stated but not yet written down.
Not met	Missing, with no owner or date to close it.
Not assessed	No document or interview available; never counted as met.

Each gap typed Blocking or Manageable; indicative result per use case — ready to start, conditional or not ready — marked statement-based. No ladder, no score.

B — A decision per use case

Level	Each of D1–D8 placed on L1–L4, current and target; per use case where relevant.
Gate	The six items verified with evidence; every gap typed Blocking or Manageable.
Matrix	Ready to start, conditional or not ready, with the earliest start date.
Summary	Readiness summary per use case, tied to phase gates; handovers to data and context.

No weighted score, no aggregate. The report opens with a decision sentence: “use case X can start on date Y; use case Z cannot start until …”.

Report Contents by Service

KOMTAS

Neither report is a maturity grade. A gives an indicative view per use case; B gives a start decision per use case and the plan behind it.

A · READINESS CHECK REPORT

- Gate status per item and use case; gap types
- Indicative result per use case, statement-based
- Key risks with their evidence type
- Recommended next step
- Evidence inventory, reusable in B

B · READINESS ASSESSMENT REPORT

- Readiness matrix with three results and earliest start
- Readiness summary per use case, tied to phase gates
- L1–L4 per dimension, with evidence type
- Items handed to the data and context layers
- Routing; Grounded Intelligence pilot by default

IN NEITHER REPORT

- A single readiness grade or weighted score
- New use case ideas or a use case list
- Comparison with other organisations
- Product or technology recommendation
- A compliance statement under any regulation

THE REPORT OPENS WITH A DECISION

Not “your AI maturity is at level n”, but “use case X can start on date Y; use case Z cannot start until … is closed”.
The whole executive summary should reduce to these two sentences. In A the same sentence is marked indicative.

THE MOST COMMON FINDING SITS IN THE LOWER LAYERS

Many assessments show that the obstacle is not the model or the AI platform but data access, the data foundation or context:
the use case is sound but its data is not reachable. This is a data finding, and the closing plan hands it to the data layer.

AI GOVERNANCE IS ONLY TOUCHED HERE

D6 checks inventory, approval and risk tiering and the controls this use case needs; it does not assess the AI governance programme itself.
That is AI Governance Readiness, a separate service; the report routes to it where D6 is weak.

Routing — Where Findings Lead

Each route follows from a finding and its evidence. Routing is a consequence of the result, not a sales proposal.

03 · METHOD · ROUTING

IF THE FINDING IS ...	... IT LEADS TO
Use case passes the gate Ready to start, or Conditional with Manageable gaps only	**Grounded Intelligence pilot (Agent 360) — default**
Data foundation weak Gate item 2 · D3 · D4	**Lakehouse / DWH Assessment**
Data the use case needs does not exist D3 · D4	**Data Modernization**
Context, documents or common definitions weak D3	**Ontology / knowledge graph (Context 360)**
Inventory, approval or risk tiering missing D6 · gate item 5	**AI Governance Readiness Assessment**
No use case with an owner Gate items 1 · 3 · D1	**Use case definition workshop; re-check afterwards**

BOUNDARY WITH AI GOVERNANCE

D6 checks inventory, approval and risk tiering, and the controls this use case needs (guardrails, change control, audit logging). The institution's AI governance programme is AI Governance Readiness, a separate Komtaş service. Internal note only.

ROUTES ARE PROPOSED SEPARATELY

This work does not build models or agents, run a PoC or select technology. Each follow-on is scoped and priced in its own proposal.

When no use case is ready, the route is the prerequisites. Blocking gaps close first, usually starting with data: data access and foundation, then context, then the path to production.

After Readiness — Grounded Intelligence

KOMTAS

The main delivery path after readiness is Komtaş's Grounded Intelligence approach. Each stage sits in a 360 layer and is fed by the dimensions assessed here.

03 · METHOD · FOLLOW-ON

Analytical Foundation

Scores, flags, signals, portfolio outputs

Data 360

fed by D4

Individual Context

History, engagement, preferences, circumstances

Data 360

fed by D3

Institutional Knowledge

Policies, risk appetite, regulation; ontology

Context 360

fed by D3

Grounded Intelligence

Evidence assembled, context synthesised, reasoning traceable

Agent 360

fed by D5 · D6

Human Decision

Full authority, complete picture; in the workflow

Action 360

fed by D2 · D8

Institutional Memory expertise stays, consistency scales — Context 360 (corporate memory) · fed by D7 governed feedback loop

HOW READINESS LEADS INTO IT

Use cases that pass the gate

Ready to start, or Conditional with Manageable gaps under control: default next step is a Grounded Intelligence pilot (Agent 360).

Lower layers not ready

Data foundation → Lakehouse / DWH Assessment or Data Modernization; context → ontology / knowledge graph; governance → AI Governance Readiness.

REFERENCE · INTERNAL ONLY

The AI team presented an agentic project built with this approach at Akbank's AI Day. The name is used only in internal files until permission for customer use is obtained (open item).

WHAT IT DELIVERS

Grounded context | Analytical synthesis | Traceability | Consistency | Governance

SECTION 4

Komtaş Side

Roles, duration, effort and sizing, deliverables and the proposal set, framework source and sector annexes, limits, package files and open items.

Competencies and roles p. 28

Duration, effort and sizing p. 29

Deliverables and proposal set p. 30

Framework source and sector annexes p. 31

Limits of the assessment p. 32

Package files and open items p. 33

Competencies and Roles

KOMTAS

Which role is active in which phase, including customer participation. In A, Komtaş works with the assessment lead, the AI / ML consultant and the data architect; roles marked “B” join in B only.

ROLE	RESPONSIBILITY	PARTY	ACTIVE PHASES
Assessment Lead	Method, scope, prerequisite gate and report	**Komtaş**	P0 – P4
AI / ML Consultant	Use case and decision role, validation, path to production (D1, D2, D7)	**Komtaş**	A P0 – P4 · B P0 – P3
Data Architect	Data access, analytical grounding, data foundation (D3, D4)	**Komtaş**	A P1 – P4 · B P1 – P3
Context Consultant	Documents, source authority, glossary, semantic layer (D3)	**Komtaş**	P1 – P2 · B
Platform Specialist	Model strategy, RAG, integration, environments, cost (D5)	**Komtaş**	P1 – P2 · B
Governance Consultant	Inventory, risk tiering, guardrails, change control; legal basis (D6)	**Komtaş**	P1 – P3 · B
Change Management Consultant	Adoption, SMEs, trust calibration, training capacity (D8)	**Komtaş**	P1 – P2 · B
Project Sponsor	Decisions, opening access to use case owners and senior management	**Customer**	P0, phase transitions
Use Case Owners	Definition, measure, decision role and outcome of each candidate	**Customer**	P0 – P2
Data Team	Data access, quality state, existing pipelines	**Customer**	P1
Platform / IT	Infrastructure, environments and path to production	**Customer**	P1
Security, Legal and Compliance	Legal basis for personal data, regulation scope, approval process	**Customer**	P1
Business Unit Representatives	Expectations and capacity to change the process	**Customer**	P1

NO ASSESSMENT WITHOUT USE CASE OWNERS

If the owners of the candidate use cases cannot be interviewed, D1 and D2 fall back to statements and gate items 1, 3 and 6 cannot be verified.
Their calendar plays the role that access approvals play in a platform assessment, and is just as decisive.

Duration, Effort and Sizing

KOMTAŞ

Indicative band values. The band is set from the short form; dates are fixed at kick-off, once interview calendars are known.

SERVICE	SMALL	MEDIUM	LARGE
A · AI & Agentic Readiness Check 6 gate items per use case · documents, interviews	1 week · 6 pd · 3 days	1.5 weeks · 9 pd · 4 days	2 weeks · 12 pd · 5 days
B · AI & Agentic Readiness Assessment 8 dimensions · gate · matrix · readiness summary	3 weeks · 22 pd · 6 days	3.5 weeks · 28 pd · 8 days	4 weeks · 34 pd · 10 days

Cell format: duration · Komtaş person-days · customer days. Customer effort grows with the number of candidate use cases: each needs its owner, the data team and, where personal data is used, legal or compliance.

SIZING DRIVERS

DRIVER	SMALL	MEDIUM	LARGE	USED IN
Candidate use cases	≤ 5	5 – 15	> 15	A · B
Business units in scope	1 – 2	3 – 6	> 6	A · B
People to interview	≤ 10	10 – 25	> 25	A · B
AI systems in production	0 – 2	3 – 10	> 10	A · B
Data sources in scope	≤ 5	5 – 15	> 15	A · B
Legal entities or locations	1	2 – 3	> 3	A · B
Degree of regulation	Low	Medium	High	B
Documentation maturity	Written	Partial	None	B
Access to senior management calendar	Easy	Medium	Hard	B
Previous assessment	Yes	Partial	No	B

BAND RULE · the highest band that at least three drivers fall into — A uses its 6 drivers, B all 10. One large driver alone does not set the band.

Deliverables and Proposal Set per Service

KOMTAS

Which documents each service produces, which package files are used to price it, who writes which proposal section, and where it usually leads.

SERVICE	DELIVERABLES	INPUT FORM · PROPOSAL TEMPLATE	USUAL NEXT STEP
A · AI & Agentic Readiness Check 1 · 1.5 · 2 weeks	· Gate status per item and use case; gap types · Indicative result per use case, statement-based · Key risks with their evidence · Recommended next step; evidence inventory	3a-readiness-check-girdi-formu 4a-readiness-check-teklif-sablonu Question set 5: questions marked A Set 6, Proposal Set: S1 – S7	→ B · Readiness Assessment → Grounded Intelligence pilot → Use case definition workshop
B · AI & Agentic Readiness Assessment 3 · 3.5 · 4 weeks	· D1–D8 on L1–L4, current and target, with evidence · Gate and gap types; matrix with earliest start · Readiness summary per use case, tied to phase gates · Evaluation corpus status; handovers to data, context · Routing to follow-on work	3b-readiness-assessment-girdi-formu 4b-readiness-assessment-teklif-sablonu Question set 5: questions marked B Set 6, Proposal Set: S1 – S5, S8 – S14	→ Grounded Intelligence pilot → AI Governance Readiness → Lakehouse / DWH Assessment → Data Modernization → Ontology / semantic layer

PROPOSAL STRUCTURE · WHO WRITES WHICH SECTION

Executive summary	Scope, use cases	Method	Deliverables	Assumptions	Schedule, person-days	Team	Price	Terms
SAT	SAT	SAT · blueprint	SAT	SAT	Delivery	Delivery	Sales	Fixed

EVIDENCE IS REUSED, NOT BILLED TWICE

If B follows A, A's evidence inventory and gate results are reused. The proposal states this in writing and reduces P1 accordingly. A is not a mandatory step before B. One question set (5) and one internal set (6) serve both services.

SAT BOUNDARY

SAT produces the scope, the use case list, the band and the first effort estimate. Delivery sets the duration, sales enters the price. SAT estimates independently first and challenges delivery's figure at the end; the challenge is recorded with its rationale either way.

Framework Source and Sector Annexes

KOMTAS

Where the method comes from since v2, what the package keeps of its own, and how sector-specific questions are added.

ONE FRAMEWORK

Framework: Komtaş Enterprise Readiness Playbook / Grounded Intelligence Readiness Framework (AI team)

Source documents (AI team, internal)

- Enterprise Readiness Playbook for Agentic Capabilities in High-Stakes Institutions
- GenAI Readiness deck; Grounded Intelligence / Agentic AI Readiness deck
- Grounded Intelligence in Banking documents (banking annex)

Taken from the AI team's framework

- Eight dimensions D1–D8 and their topics
- L1–L4 ladder (Grounded Intelligence Readiness Framework)
- Blocking / Manageable gap types, readiness summary form, phase gates
- Diagnostic order, failure modes, guiding principles
- Grounded Intelligence as the follow-on

Kept from the package (commercial chassis)

- Services A / B, durations, efforts, bands and band rule
- Prerequisite gate (now six items) and use case result
- Routing, proposal templates, question sets, app wiring

Customer files do not name the AI team's internal documents or any customer.

SECTOR ANNEXES · QUESTION SETS 5 AND 6

The core question set stays generic. Optional annex sheets use the same columns as the main sheet, including the SERVICE column, and are marked optional; 10–15 questions each.

Banking Annex

Credit policy and rule refinement; corporate / SME credit assessment support; collections; retention and silent deterioration; portfolio signals; exception, override and referral decisions; model risk and explainability of credit decisions; BDDK rules on outsourcing and cloud, referred to generically

Insurance Annex

Underwriting; claims; fraud; customer service; health data as special category personal data; SEDDK rules, referred to generically

Further annexes are added as customers come. Customer-specific questions go to the internal set (file 6), not to the customer set.

Regulators are cited generically (“BDDK regulations”, “SEDDK regulations”), never by article number.

Limits of the Assessment

KOMTAS

What this work does not do and does not guarantee is stated explicitly in the report itself

No use case ideation

Existing candidates are assessed. If there are none, a use case definition workshop comes first; that is separate work.

No model development, no PoC

The work assesses readiness, including whether an evaluation corpus exists. Building the corpus or testing feasibility is pilot work.

No technology or product selection

D5 assesses current capability and proportionality; which product or model to buy is not part of this assessment.

No in-depth data quality measurement

Access and whether quality is measured are assessed. Data quality itself, and the data foundation, belong to a Lakehouse or DWH Assessment.

No compliance statement

D6 assesses readiness, including KVKK and sector rules. A statement of compliance can only be given by authorised bodies.

No guarantee of success

The report shows which use case can start; it does not commit to the use case's success. Results change only as prerequisites close.

THE MOST MISUNDERSTOOD LIMIT

Organisations often expect a use case list from this work. The assessment does not generate ideas — it assesses and orders existing candidates. If there are none, P0 finds it and the work stops; otherwise the assessment turns into a brainstorm and produces no decision.

THE DECISION BELONGS TO THE ORGANISATION

The report shows which use case can start; whether to start is the organisation's decision. Commercial priority, budget and timing are outside the assessment, and the matrix does not replace those decisions.

OBJECTIONS ARE RECORDED, NOT RESOLVED

“We have that data” is a common objection; it is recorded next to the finding with the evidence of whether access was granted.

Package Files and Open Items

KOMTAS

The files of the AI & Agentic Readiness package (v2), each in Turkish (-tr) and English (-en), and the points to settle before the first proposal.

FILE · ai-readiness-assessment...	PURPOSE	AUDIENCE
...-0-surec-akisi	Process flow from first contact to proposal	internal
...-1-blueprint	This document: services, method, sizing	internal
...-2-musteri-sunumu	Customer deck: two services, about 20 minutes plus appendix	customer
...-3a / 3b-...-girdi-formu	Proposal input forms for A and B, filled by SAT	internal
...-4a / 4b-...-teklif-sablonu	Proposal templates, numbered AIA / AIB	customer
...-5-musteri-soru-seti	Customer question set, marked A · B, A or B; optional sector annexes	customer
...-6-ic-soru-seti	Internal question set; Proposal Set S1 – S14; sector annexes	internal

WHAT CUSTOMER FILES DO NOT CONTAIN

No internal effort figures, no internal service codes, no v1 dimension codes, no customer names (including the AI Day reference) and no reference to the AI team's internal documents. Follow-on work appears only as “separate service” or “separate proposal”. There is no access model; evidence is documents, interviews and records the customer shares.

OPEN ITEMS

1 Durations and efforts still not calibrated

v2 keeps the v1 values (readiness family) although B now covers eight dimensions, L1–L4 and the readiness summary. Check against the AI team's projects; delivery confirmation needed.

2 Boundary with AI Governance Readiness

D6 is wider than the v1 governance dimension (MRM extension, guardrails, change control). The detailed boundary is written when that package is rebuilt.

3 Akbank name in customer material

The AI Day reference stays internal. Permission from the bank is needed before the name is used with customers.

4 Work stopped at P0

If P0 finds no candidate use case with an owner, the work stops. Billing of P0, and credit against a use case workshop, to be set with sales.
