KOMTAS

AI & AGENTIC READINESS

AI Advisory Services

Two services · AI & Agentic Readiness Check, AI & Agentic Readiness Assessment

1 **Why it matters**
Readiness, not technology, decides whether an AI use case can start — and generative AI adds risks of its own.
p. 2 – 3

2 **Two services**
Readiness Check and Readiness Assessment — what each covers, how long it takes.
p. 4 – 6

3 **How it is run**
One method, four kinds of evidence, phases and team by service.
p. 7

4 **What comes out and next steps**
Deliverables, the path to Grounded Intelligence, what is needed from your side. Appendix from p. 11.
p. 8 – 10

Where It Sits — One Question, Four Layers

KOMTAS

An AI answer is built from the layers below it. The top two layers are the target; the bottom two are the prerequisites that decide whether AI work can start.

01 · WHY IT MATTERS

"Which customers are likely to leave next quarter, and why?"

"412 customers at risk; the retention team acts on the list."
built on accessible data, a named owner and an approved path to production

TARGET · WHERE AI WORK RUNS

Action 360
Intelligent Work Experience

Where the question is asked and the answer lands: Teams, Slack, portal, API.

Agent 360
Governed Digital Workforce

Models and agents that turn the question into an answer and act on it.

PREREQUISITE · MOST FINDINGS ARE HERE

Context 360
Enterprise Context

Says what "customer" and "churn" mean: ontology, semantic layer, master data.

Data / Analytic 360
Trusted Data Foundation

Holds and serves the data the model needs: lakehouse, warehouse, integration.

The answer travels back up — it is only as good as the two layers below

WHERE AI WITHOUT ITS PREREQUISITES SHOWS UP

Pilot succeeds, never goes live

No path to production was defined before the start.

Path to production

"We have that data"

Access takes months, or the data is not in the expected form.

Data access

No one acts on the output

No owner decides on it; who reviews it was never written.

Owner · decision role

Stopped at go-live

Personal data used without a written legal basis.

Legal basis

Readiness Is the Binding Constraint

KOMTAS

Most AI initiatives that stall do so for institutional reasons, not technical ones. Generative AI and agents add failure modes of their own; readiness is what keeps them under control.

01 · WHY IT MATTERS

Most failures are institutional, not technical.
The technology is rarely the reason an initiative stalls. The usual reasons:

- **Vague problem, no bounded decision**
- **Data assumed ready, never audited**
- **Governance not built for generative output**
- **No operating model after the PoC**
- **Users over-trust or ignore the output**

GENERATIVE AI AND AGENT-SPECIFIC FAILURE MODES · WHAT READINESS MUST CONTROL

Hallucination
Content not supported by the evidence given — invented facts or sources.

False consistency
Conflicting evidence turned into one smooth story; the conflict is hidden.

Weak numerical reasoning
Magnitudes and quantitative significance misread, stated with confidence.

Prompt sensitivity
Small changes in wording or context give materially different answers.

Prompt injection
Text in an input or a retrieved document overrides the instructions.

Automation bias
Polished output accepted without scrutiny; human review becomes nominal.

Retrieval failure
Stale, partial or irrelevant documents retrieved; the gap is not visible.

Drift
Quality declines as documents, prompts or models change without re-validation.

THREE PRINCIPLES THAT FOLLOW

Human authority for consequential decisions
The system may inform, draft, challenge or recommend; a person decides.

Grounding is a design requirement
Every output is tied to attributable evidence; gaps are flagged, not filled.

Complexity must be earned
The simplest design that is safe; agents only where a fixed workflow is not enough.

Two Services — Which One Fits

KOMTAS

Readiness for AI use cases: generative AI, LLM and agentic systems, and classic ML where relevant. Each service can be taken on its own.

02 · TWO SERVICES

A — AI & Agentic Readiness Check

p. 5

Check the gate · documents and interviews

Focus	Whether the candidate use cases meet the six gate items
Scope	6 gate items per candidate use case, gap type
Result	Gate status, gap type and an indicative result per use case
System access	None
Your team	3 · 4 · 5 days, S · M · L
Evidence	Statement · Document · Observation · Measurement
Weeks	S 1 · M 1.5 · L 2

B — AI & Agentic Readiness Assessment

p. 6

Readiness per use case · closing plan and phase gates

Focus	Which use case can start, when, and what must close first
Scope	8 dimensions on L1 – L4 and the 6-item gate, per use case
Result	Readiness matrix, readiness summary, closing plan
System access	None required
Your team	6 · 8 · 10 days, S · M · L
Evidence	Statement · Document · Observation · Measurement
Weeks	S 3 · M 3.5 · L 4

WHICH ONE FITS · THE QUESTION ON THE TABLE DECIDES

Is a quick view needed of whether the candidate use cases meet the prerequisites to start? → A

Are a start date per use case and a plan to close the gaps needed before investing? → B

Both? A first: its evidence is reused in B and not billed twice.

A · AI & Agentic Readiness Check

Check the gate · documents and interviews.

KOMTAS

02 · TWO SERVICES · A

A

AI & Agentic Readiness Check

Whether the candidate use cases meet the six gate items

WEEKS S · M · L	YOUR TEAM days, S · M · L	SYSTEM ACCESS
1 · 1.5 · 2	3 · 4 · 5	None

WHAT IS CHECKED · 6 GATE ITEMS, PER USE CASE

1 Defined use case — D1

A written candidate with an owner, a measurable outcome and a stated data need

2 Real data access — D3

Access to the data the use case needs has been granted — knowing the data exists is not enough

3 Decision-making owner — D1 · D8

A person on the business side with authority over scope and acceptance, in writing

4 Path to production — D5 · D7

Where the model or agent will run, how it is monitored and who operates it

5 Legal basis — D6

A written basis where personal or regulated data is used

6 Decision role and autonomy boundary — D2

Which outputs inform, draft or recommend, which need human review, and who decides

HOW IT IS ASSESSED

Status per item, per use case

Met | Partly met | Not met | Not assessed

- **Met —** a document, a named person or a decision record shows it
- **Partly met —** exists, but incomplete or not yet in force
- **Not met —** missing; work cannot start on it
- **Not assessed —** no evidence — never counted as met

Not met → always Blocking. Partly met or not assessed → Blocking or Manageable on the evidence; no owner or no legal basis → always Blocking. Any Blocking gap → not ready; only Manageable gaps → conditional; no gap and nothing left not assessed → ready to start.

WHAT YOU GET

- Gate status and gap type for each candidate use case, with evidence
- Indicative result per use case, marked as statement-based
- Key risks and the recommended next step

No system access; AI systems in production and data sources are recorded as statements. If no candidate has an owner, the work stops at scoping.

B · AI & Agentic Readiness Assessment

Readiness per use case · closing plan and phase gates.

KOMTAS

02 · TWO SERVICES · B

B

AI & Agentic Readiness Assessment

Which use case can start, when, and what must close first

WEEKS S · M · L	YOUR TEAM days, S · M · L	SYSTEM ACCESS
3 · 3.5 · 4	6 · 8 · 10	None required

WHAT IS ASSESSED · 8 DIMENSIONS

D1 Strategic & business

Bounded problem, named owner, quantified value, baseline; why AI rather than rules or analytics

D2 Decision process & functional

Role in the decision chain, decision rights, human review, autonomy boundary, exception flows

D3 Data & knowledge

Data access and quality, text evidence, versioned policies, source hierarchy, glossary

D4 Analytical grounding

Scores and signals at time of use, reason codes, thin evidence, the data foundation behind them

D5 Architecture, technology & integration

Proportionate design, model strategy, retrieval (RAG), APIs, deployment environment, cost

D6 Security, governance & control

AI inventory, risk tiering, guardrails, prompt injection tests, change control, audit, KVKK

D7 Operating model, validation & lifecycle

Owner roles, evaluation corpus, validation of outputs, monitoring and drift, MLOps

D8 People, adoption & change

Skills, experts as design partners, trust calibration, automation bias, leadership

Plus the 6-item gate

Use case · data access · owner · production · legal basis · decision role. Every gap is typed Blocking or Manageable.

HOW IT IS ASSESSED

Current and target level per dimension

L1 | L2 (current) | L3 (target) | L4

Four-level ladder: L1 Exploratory, L2 Pilot Ready, L3 Production Ready, L4 Scalable. Placed on evidence, per use case. No weighted score; the gate and gap types decide.

WHAT YOU GET

- Readiness summary per use case: gaps, Blocking or Manageable, action, owner, date
- Closing plan tied to phase gates: development, pilot, production, scale
- Use case readiness matrix with earliest start dates
- Handovers to the data and context layers; routing

No system access needed. AI inventory records, pilot and production counts and evaluation results are used as measurements if shared.

How It Is Run — One Method, Two Depths

KOMTAS

The same evidence types and phases are used in both services. The service sets how deep the evidence goes and how long each phase takes.

03 · HOW IT IS RUN

FOUR KINDS OF EVIDENCE

Measurement
B

AI inventory, pilot and production counts, evaluation results, if shared

Document
A · B

Use case document, policy, decision rights, data sharing approval

Observation
B

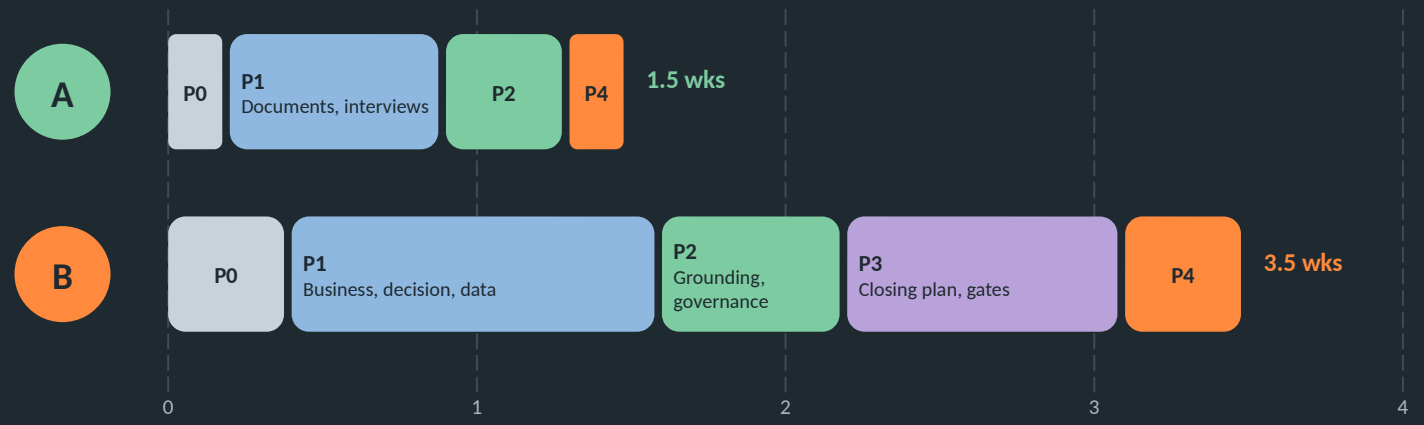

A use case traced from idea to production

Statement
A · B

What a person says — recorded as a claim

A level or a met gate item is given only where a document, an observation or a measurement supports it. Statements alone are reported as claims.

PHASES BY SERVICE · M BAND, IN WEEKS

P0 scope · P1 business and decision first, then data and knowledge · P2 grounding, architecture and governance in parallel · P3 closing plan and phase gates (B only) · P4 read-out. Operating model and people are covered throughout.

WHO DOES THE WORK

A Assessment lead · AI / ML consultant · data architect

B Lead · AI / ML consultant · data architect · context, platform, governance and change management consultants

Data access is the claim checked most often. "We have that data" is tested with one question: has access been granted for this use case, and how long did it take.

Use case owners are part of the evidence. Owner, measure, decision role and data need cannot be judged from the data or IT team alone. Interview load grows with the number of use cases.

What Comes Out — and Where It Leads

KOMTAS

What each service hands over, and the follow-on work an assessment usually opens.

04 · WHAT COMES OUT

WHAT IS HANDED OVER

	A	B
Gate per use case — six items, each with its evidence	✓	✓
Gap type per finding — Blocking or Manageable	✓	✓
Indicative result per use case, marked as statement-based	✓	–
Key risks and the recommended next step	✓	–
Eight dimensions — current and target level, L1 – L4	–	✓
Use case readiness matrix with earliest start dates	–	✓
Readiness summary per use case — action, owner, date, evaluation corpus status	–	✓
Closing plan tied to phase gates; routing to follow-on work	–	✓

WHERE IT USUALLY LEADS

- **Grounded Intelligence pilot**
  use cases that pass the gate
- **Data foundation work**
  Lakehouse / DWH Assessment, Data Modernization
- **Use case definition workshop**
  when no candidate has an owner
- **Ontology / knowledge graph**
  when the context layer is weak
- **AI Governance Readiness**
  inventory, approval, risk tiering in depth

The report opens with a decision, not a maturity level. “Use case X can start on date Y; use case Z cannot start until … is closed.” A Readiness Check can be followed by a Readiness Assessment; evidence already collected is reused and not billed twice.

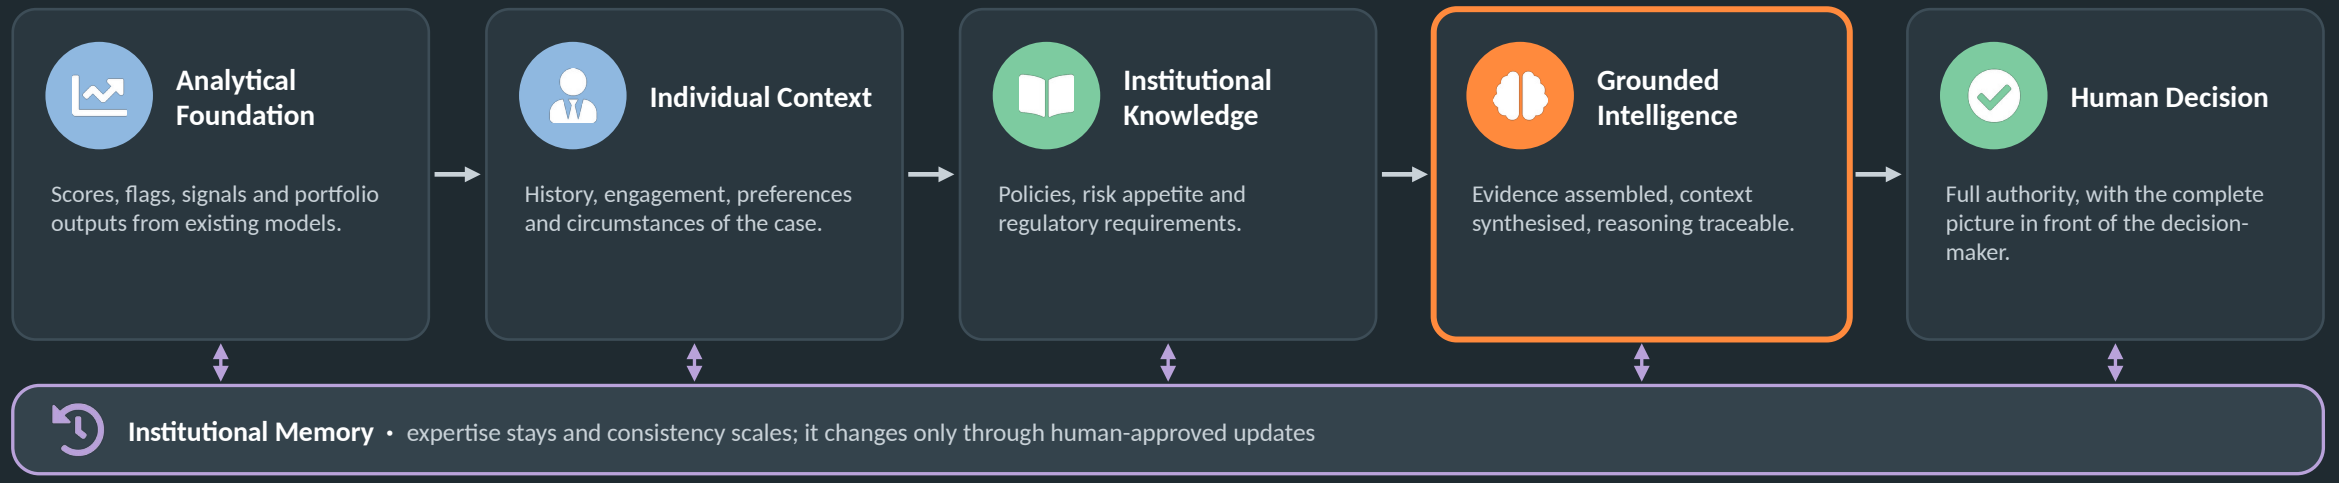

After Readiness: Grounded Intelligence

KOMTAS

A use case that passes the gate moves to delivery. The default path is the Grounded Intelligence approach: AI reasons over the institution's own evidence, and a person decides.

04 · WHERE IT LEADS

THE APPROACH · FROM ANALYTICAL EVIDENCE TO A HUMAN DECISION

Analytical Foundation runs on Data 360, Institutional Knowledge on Context 360 and Grounded Intelligence on Agent 360; the decision lands in Action 360.

WHAT IT GIVES

1. **Grounded context** uses the relevant business context
2. **Analytical synthesis** combines models and reasoning
3. **Traceability** every recommendation can be explained
4. **Consistency** same inputs, same logic
5. **Governance** aligned to policy and regulation

The readiness summary is the pilot's starting brief.
For a use case that passes the gate, the assessment has already described the evidence (D3), the analytical outputs (D4) and the decision role (D2) the pilot will use. Gaps typed Manageable travel with it as compensating controls.

What Is Needed From Your Side — and the Next Steps

KOMTAS

Three roles on your side, two constraints that set the date, and four steps from today to the start of the work.

04 · NEXT STEPS

WHO IS NEEDED ON YOUR SIDE

Sponsor

start and read-out

Sets the decision the work supports and the service to take. Opens access to use case owners.

Use case owners

evidence · start condition

Describe each candidate, its measure, data need and decision role; check the findings for their use case.

Data and IT teams

throughout

Explain data access, the data foundation and the path to production as they run today.

Security, legal, compliance, model risk and business unit representatives join in B for governance, regulation and process change.

TWO THINGS THAT SET THE DATE

Use cases in scope

Each candidate adds an owner interview and a gate check; in B also data access and legal review.

Narrowing the candidates is the main lever

Management calendars

Sponsor and use case owner interviews depend on calendars, not on team size.

Booked in P0, before interviews start

Neither can be shortened by adding people. Both are asked in the short form.

NEXT STEPS

1. **Service walkthrough** — today
   you are here
2. **Service choice and short form** — about one hour
3. **Proposal** — service, band, schedule
4. **Kick-off** — use cases, interviews, calendar

Start where the decision is. A Readiness Check in one to two weeks, or a Readiness Assessment in three to four when a start date per use case, a closing plan and phase gates are needed.

APPENDIX

Method in detail — for reference and questions

1 **Scope and context**
Where the services sit · Recurring patterns
p. 12 – 13

2 **Method**
Eight dimensions · Six-item gate and gap types · Readiness matrix · L1 – L4 ladder · Evidence model
p. 14 – 18

3 **Team, sizing and limits**
Roles · Duration and sizing · Report and routing · Limits of the assessment
p. 19 – 22

Where This Assessment Sits — AI Value Proposition

KOMTAS

The assessment does not measure a single layer. It asks whether the bottom two layers are ready for work in the top two.

Action 360

Intelligent Work Experience

TARGET

Teams | Slack | WhatsApp | Web / Portal | Claude Desktop | API, Headless

Agent 360

Governed Digital Workforce

TARGET

INDUSTRY	Manufacturing	Retail	Banking	Energy	Aviation	Other
FUNCTION	Customer Service	Sales	Finance	Procurement	Operations	Other

Context 360

Enterprise Context

PREREQUISITE

Semantic Layer | Ontology | Knowledge Graph | Master Data | Corporate Memory

Data / Analytic 360

Trusted Data Foundation

PREREQUISITE

Lakehouse | Datawarehouse | Integration | Data Virtualization | Governance / MDM | Access Control

The most frequent finding is that the gap is not on the AI side but in the two layers below. The roadmap then starts with data, not with AI.

LOGIC OF THE ASSESSMENT

Top two layers — target

The assessment asks whether what is needed for work in the agent and application layers is in place.

Bottom two layers — prerequisite

If the data foundation and the context layer are not ready, AI work does not start; that is a data finding, not an AI finding.

Routing

A weak context layer leads to ontology work; a weak data foundation leads to lakehouse or modernization work.

Seven Recurring Patterns — Most Failures Are Institutional

KOMTAS

Each can be shown with evidence; the assessment is not done to spot them but to show them

PoC graveyard

Pilots end well, none reaches production. The problem is not the model; the path to production was never defined.

Shown by: pilots started, share that reached production, reasons for not reaching it

An idea list, not use cases

There are hundreds of “AI opportunities”; none has an owner, a measurable outcome and accessible data.

Shown by: share of candidates that pass all three tests

Data assumed ready

The data is said to “exist”; when access is requested, approval takes months or the data is not in the expected form.

Shown by: time to access the required data per use case, and share granted

Tool bought, problem not defined

A platform or licence is bought and the work it should do is looked for later. The investment is made; no value follows.

Shown by: usage of purchased tools and number of use cases linked to them

No one owns the decision

The output reaches users, but who decides, who reviews and who can override was never written. Review becomes a formality.

Shown by: share of use cases with a written decision role and review point

No success measure

Whether the initiative worked is debated, because what success means was not written before the start.

Shown by: share of initiatives with a measurable target defined at the start

Governance not built for generative output

Inventory, approval, prompt change control and monitoring are set up only after the first systems are live.

Shown by: share of AI systems in production that are recorded and change-controlled

ALL SEVEN HAVE THE SAME ROOT

None is a model, tool or technology problem. All seven come from something not written down before the start: the use case owner, the success measure, data access, the decision role, the path to production and responsibility. The assessment asks for each of these.

Eight Readiness Dimensions

KOMTAS

Readiness Assessment (B). Each dimension is placed on the L1 – L4 ladder, per use case. Each is necessary; none is sufficient on its own. No weights, no total score.

	DIMENSION	WHAT IS ASSESSED	WHAT READY LOOKS LIKE
D1	**Strategic & Business Readiness**	Bounded problem statement, named business owner, quantified value, baseline and success measure; why AI rather than an analytical or rules solution; realistic expectations	Problem signed off by the owner; value and baseline written; reason for AI documented
D2	**Decision Process & Functional Readiness**	Role in the decision chain (inform, draft, challenge, recommend, route / execute); decision rights; human review checkpoints with override logging; autonomy boundary; exception and referral flows	Role agreed with business and governance; checkpoints designed and logged; boundary defensible
D3	**Data & Knowledge Readiness**	Structured data access and quality; text evidence audited; policies versioned and retired; source authority hierarchy and conflict rule; multimodal evidence; glossary, master data, semantic layer	Evidence audited; documents versioned; hierarchy and conflict rule defined; knowledge documented
D4	**Analytical Grounding Readiness**	Scores, signals and diagnostics available at time of use, with freshness and coverage; reason codes; thin-evidence handling; model output kept apart from LLM interpretation; the data foundation behind them	Outputs accessible with a freshness SLA; drivers available; confidence shown to the user
D5	**Architecture, Technology & Integration Readiness**	Proportionate design; model strategy (hosted, private, SLM, fine-tuning); RAG and retrieval testing; prompts as governed configuration; agents only where needed; APIs and write-back; data residency; memory; cost	Simplest safe design; retrieval quality measured; integration confirmed; deployment approved
D6	**Security, Governance & Control Readiness**	AI inventory, approval and risk tiering; model risk extended to generative systems; guardrail layers; prompt injection testing; change control; audit logging; third-party model risk; KVKK and sector rules	Controls designed in from the start; adversarial tests done; change control and audit trail in place
D7	**Operating Model, Validation & Lifecycle Readiness**	Product, technical, content, validation, business and governance owners; evaluation corpus; validation of generative outputs; monitoring and drift; governed feedback loop; MLOps for ML models	All owner roles assigned; evaluation corpus exists or is planned; monitoring and feedback governed
D8	**People, Adoption & Change Readiness**	Skills and roles; subject-matter experts as design partners; trust calibration; automation bias; change management; leadership alignment	Users trained on failure modes; experts involved from design; leadership aligned

DECISION ROLE AND ANALYTICAL GROUNDING ARE WHERE GENERATIVE AI DIFFERS

D2 asks what the system may do in the decision chain and who reviews it; D4 asks whether its reasoning is tied to the institution's own scores and signals.
D6 checks whether AI inventory, approval and risk tiering exist; how well they work is the subject of a separate service, AI Governance Readiness.

Gate — Six Items per Use Case

KOMTAS

Checked per use case in both services. Independent of the ladder: an item that is not met is not offset by high levels elsewhere. Every gap found is typed.

	ITEM	DIMENSION	WHAT IT MEANS	HOW IT IS VERIFIED	IF NOT MET
1	**Defined use case**	D1	A written candidate with an owner, a measurable outcome and a stated data need	Use case document or written definition	There is no readiness to assess; a use case definition workshop comes first
2	**Real data access**	D3	Access to the data the use case needs has been granted — knowing it exists is not enough	Access request record or sample data	No start date can be given; access may take longer than the project
3	**Decision-making owner**	D1 · D8	A person on the business side with authority over scope and acceptance	Assignment letter or written appointment	The work becomes an internal technical project and the process does not change
4	**Path to production**	D5 · D7	Where the model or agent will run, how it is monitored and who operates it	Platform definition or service agreement	The pilot succeeds and never goes live — the most common failure
5	**Legal basis**	D6	Where personal or regulated data is used, a legal basis exists	Written opinion of legal or compliance	The work stops at go-live; this cannot be fixed afterwards
6	**Decision role and autonomy boundary**	D2	Which outputs inform, draft or recommend, which need human review before action, and who decides	Decision rights record or process design with review points	Oversight exists on paper only; the system drifts from informing to deciding

BLOCKING GAP
Must be closed before any pilot. Typical: no data access, no legal basis, no owner who can decide.

MANAGEABLE GAP
A pilot is possible with a compensating control and monitoring; the gap gets an owner and a target date.

RESULT RULE
Not met → always Blocking; no owner or no legal basis → always Blocking
Partly met / not assessed → Blocking or Manageable on the evidence
Any Blocking → not ready · only Manageable → conditional
No gap and nothing left not assessed → ready to start

THE GATE IS RUN FOR EACH USE CASE
No single “ready” or “not ready” decision is given for the whole organisation. Status per item: met, partly met, not met or not assessed — not assessed is never counted as met.
Item 6 matters most for generative AI and agents: oversight that is not designed before build exists only on paper.

Use Case Readiness Matrix

KOMTAS

The main output of the Readiness Assessment (B): which use case can start when, and what is missing. The Readiness Check gives the gate columns and an indicative result.

USE CASE	DEFINED	DATA	OWNER	PRODUCTION	LEGAL	DECISION ROLE	GAP TYPE	RESULT	EARLIEST START

THREE RESULTS

READY TO START

No gap; no item left not assessed

- Scope and acceptance criteria can be written
- A start date can be given
- Usual next step: a Grounded Intelligence pilot

CONDITIONAL

Only Manageable gaps

- Pilot with a compensating control and monitoring
- Each gap gets an owner and a target date
- Often waits for data access or a legal opinion

NOT READY

At least one Blocking gap

- The gap is usually in a lower layer — data or context
- The use case is deferred; another candidate moves up
- Closing work becomes a separate piece of work

WHY NO SINGLE READINESS GRADE IS GIVEN

"The organisation's AI readiness is 2.8 out of 5" serves no decision. The same organisation can start one use case tomorrow and not start another for six months. The decision is per use case; dimension levels explain the reasons behind it, they are not the decision itself.

THE CLOSING PLAN FOLLOWS THE PHASE GATES

Each open gap is placed against the gate it blocks: approve development, launch a controlled pilot, transition to production, scale to adjacent use cases.

Four-Level Readiness Ladder — L1 to L4

KOMTAS

Readiness Assessment (B). Each dimension is placed per use case, current and target. A level is shown with evidence, not claimed; without evidence, one level lower is recorded.

L1 Exploratory

Interest exists; no governed use case, owner or operating model

- Driven by interest or competitive pressure
- Data and governance not addressed for the use case
- No evaluation corpus

Implication: Not ready for a pilot; foundational work comes first

L2 Pilot Ready

Bounded use case with business ownership, data access and entry-level governance

- Named owner and success measure
- Data for the pilot scope is accessible
- Decision rights and basic controls written

Implication: A controlled pilot with compensating controls and monitoring

L3 Production Ready

Governed solution in a live workflow with validation, monitoring and clear accountability

- Validated against quality measures
- Owner roles assigned and resourced
- Governance and security approvals in place

Implication: Production for the validated use case

L4 Scalable

Architecture and governance extend to adjacent use cases without rebuilding

- Reusable patterns documented
- Shared evaluation, prompt and retrieval governance
- Learning applied through governed change

Implication: Portfolio approach; new use cases reuse the foundation

PHASE GATES · THE CLOSING PLAN IS TIED TO THESE

1 Approve development → 2 Launch controlled pilot → 3 Transition to production → 4 Scale to adjacent use cases

READINESS IS USE-CASE SPECIFIC

The same organisation can be at L3 on business readiness for one use case and at L2 on data for another.
The profile per dimension decides for each use case; no aggregate score is calculated.

TARGET LEVEL IS THE ORGANISATION'S DECISION

L2 in the dimensions that matter is enough for a controlled pilot; L3 is needed for production. L4 makes sense once the same pattern is to be reused in adjacent use cases. Whatever the levels, the gate decides whether a use case starts.

Evidence Model

KOMTAS

Each finding is tied to an evidence type, shown in the report. The Readiness Check uses documents and statements; observation and measurement are used in B.

MEASUREMENT
Measurement

A number a system produces

· AI inventory records, pilot and production counts, evaluation results, access-request times — used when shared

Highest confidence

ARTEFACT
Document

An existing document or record

· Use case document, policy, decision rights, architecture, prompt change records, data sharing approval

High confidence · currency is verified

OBSERVATION
Observation

A process traced end to end

· A use case traced from idea to production, an access approval followed, a human review step

Medium confidence · one-off observation

STATEMENT
Statement

What people report

· Interviews with managers and teams, surveys, workshop outputs

Low confidence · cannot confirm a level alone

THREE-STATE EVIDENCE SCALE

Evidence provided
Shown by a record or a document

Partial evidence
Evidence exists, but its scope is narrow or its currency unclear

Evidence could not be produced
Not measured because no record is kept — a finding in itself

THE CLAIM CHECKED MOST OFTEN IS DATA ACCESS

"We have that data" is heard in almost every organisation. It is checked with one question: has access been granted for this use case, and how long did it take. If no access record can be shown, the item is marked as based on statements only.

"NO RECORD IS KEPT" IS AN ANSWER

If pilot counts, access times, an AI inventory or an evaluation corpus are not kept, that is not missing evidence but a finding.
It is not filled in by estimate; the report states that no record is kept and the level of the dimension follows from it.

Competencies and Roles

KOMTAS

Which role is active in which phase, including expected customer participation. The Readiness Check runs with the lead, the AI / ML consultant and the data architect; P3 is Readiness Assessment only.

ROLE	DUTIES	PARTY	ACTIVE PHASES
Assessment Lead	Method, scope, gate, gap types and report	**Komtaş**	P0 – P4
AI / ML Consultant	Use case, decision role, grounding, validation and lifecycle	**Komtaş**	P0 – P3
Data Architect	Data, knowledge and analytical grounding dimensions	**Komtaş**	P1 – P3
Context Consultant	Glossary, master data, semantic layer, source hierarchy	**Komtaş**	P1 – P2
Platform Specialist	Architecture, model strategy, retrieval, integration, deployment	**Komtaş**	P1 – P2
Governance Consultant	AI inventory, risk tiering, guardrails, change control	**Komtaş**	P1 – P3
Change Management Consultant	Adoption, trust calibration, expert involvement, training	**Komtaş**	P1 – P2
Project sponsor	Decision-making, opening access and the interview calendar	**Customer**	P0, phase transitions
Use Case Owners	Definition, measure, decision role of candidate use cases	**Customer**	P0 – P2
Data Team	Data access, quality status, existing pipelines and models	**Customer**	P1
Platform / IT	Infrastructure, environments, deployment path	**Customer**	P1
Security, Legal and Compliance	Legal basis, regulatory scope, model risk, approval process	**Customer**	P1
Business Unit Representatives	Process change, review practice and expectations	**Customer**	P1

NO ASSESSMENT WITHOUT ACCESS TO USE CASE OWNERS

If the owners of the candidate use cases cannot be interviewed, dimension D1 falls back to statements and the first gate item cannot be verified.
Their calendar plays the role that access approvals play in a platform assessment, and is just as decisive.

Duration and Sizing by Service

KOMTAS

Indicative band values. The band is set from the short form; dates are fixed at kick-off, once the use case list and interview calendar are known.

SERVICE	SMALL	MEDIUM	LARGE
A · AI & Agentic Readiness Check 6 gate items · per use case	1 week · 3 days	1.5 weeks · 4 days	2 weeks · 5 days
B · AI & Agentic Readiness Assessment 8 dimensions · L1 – L4 · gate	3 weeks · 6 days	3.5 weeks · 8 days	4 weeks · 10 days

Cell format: duration · time needed from your team (days). Your team's time grows with the number of use cases. Commercial terms are set out in the proposal.

SIZING DRIVERS

DRIVER	SMALL	MEDIUM	LARGE	USED IN
Candidate use cases	≤ 5	5 – 15	> 15	A · B
Business units in scope	1 – 2	3 – 6	> 6	A · B
People to interview	≤ 10	10 – 25	> 25	A · B
AI systems in production	0 – 2	3 – 10	> 10	A · B
Data sources in scope	≤ 5	5 – 15	> 15	A · B
Legal entities or locations	1	2 – 3	> 3	A · B
Degree of regulation	Low	Medium	High	B
Documentation maturity	Written	Partial	None	B
Access to senior management calendar	Easy	Medium	Hard	B
Previous assessment	Yes	Partial	No	B

BAND RULE · the highest band that at least three drivers fall into. One large driver alone does not set the band.

Report and Routing

KOMTAS

The report does not give a maturity grade; it gives a start decision per use case and a plan to close the gaps

WHAT THE REPORT CONTAINS

- Use case readiness matrix and the three results
- Readiness summary per use case: gaps, type, action, owner, date
- Closing plan tied to the phase gates
- Level per dimension and the evidence behind it
- Handovers to the data and context layers

WHAT THE REPORT DOES NOT CONTAIN

- One readiness grade or weighted score — none is calculated
- Comparison with other organisations
- Product or platform recommendation
- New use case ideas — existing candidates are assessed
- Recommendations without a finding

ROUTING

- Use case passes the gate — Grounded Intelligence pilot
- Data foundation weak — Lakehouse or DWH Assessment
- Context layer weak — ontology and knowledge graph
- AI governance weak — AI Governance Readiness
- No usable data — Data Modernization
- Routing follows from a finding, not a sales aim

THE REPORT OPENS WITH A DECISION

The report does not open with “your maturity is at level N”, but with “use case X can start on date Y; use case Z cannot start until … is closed”.
The whole executive summary should reduce to these two sentences; if it cannot, the assessment has not answered its question.

THE MOST FREQUENT FINDING IS NOT ABOUT AI

Many assessments show that the obstacle is not the model or the platform but data access, analytical grounding and the context layer.
Moving part of the AI budget one layer down then gets the organisation to its first use case faster.

AI GOVERNANCE IS CHECKED HERE, NOT ASSESSED IN DEPTH

Dimension D6 checks whether an AI inventory, an approval mechanism and risk tiering exist and whether controls are designed for generative output.
How well they work is the subject of a separate service, the AI Governance Readiness Assessment.

Limits of the Assessment

KOMTAS

What this work does not do and does not guarantee is stated explicitly within the report

No use case ideation

Existing candidates are assessed. If there are none, a use case definition workshop is needed first; that is separate work.

No model development, no PoC

The work assesses readiness. The evaluation corpus is assessed, not built; a pilot is planned as separate work.

No technology or product selection

The architecture dimension looks at existing capability; which product to buy is not part of this assessment.

No in-depth data quality measurement

Accessibility and whether quality is measured are assessed. Data quality itself is the subject of a separate assessment.

No compliance statement

The governance dimension assesses readiness. A statement of compliance can only be given by authorised bodies.

No guarantee of readiness

The result does not change until the gaps close. The report gives a start decision; it does not promise success.

THE MOST MISUNDERSTOOD LIMIT

Organisations often expect a list of use cases from this work. The assessment does not generate ideas — it assesses and ranks existing candidates. If there are none, this is found at scoping and the work stops; otherwise the assessment turns into a brainstorm and produces no decision.

THE DECISION IS THE ORGANISATION'S

The report shows which use case can start; whether to start is the organisation's decision. Commercial priority, budget and timing are outside the scope of the assessment, and the matrix does not replace those decisions.

OBJECTIONS ARE RECORDED, NOT RESOLVED

“We already have that data” is a common objection; it is recorded next to the finding together with evidence of whether access was granted.
