AI & AGENTIC READINESS · SERVICE A

AI & Agentic Readiness Check — Proposal Input Form

Information for a statement-based first view of whether the candidate use cases (generative AI, LLM, agentic systems, classic ML where relevant) can start, and the proposal field each item fills. Once the form is returned, the proposal text is produced.

Rows marked ● are BLOCKERS — the proposal cannot be written without them and they cannot be filled with assumptions.

If rows marked ○ remain missing, they are written into the proposal as assumptions and go to section 5.

LIMIT OF SERVICE A: the evidence is documents (use case documents, policies, AI inventory, role definitions) and interviews; Komtaş is not given system access and no measurement is committed. Access to platform, model and access-request records is therefore not asked here.

A does not produce a maturity level, a score or a closing plan. The result is the status of the six-item prerequisite gate for each candidate use case (Met / Partly met / Not met / Not assessed), gaps classified Blocking or Manageable, and an indicative result marked as statement-based: Ready to start / Conditional / Not ready. Key risks and the recommended next step come with it.

If the customer expects a level per dimension, a use case readiness matrix with earliest start dates or a prerequisite closing plan, the right service is B, not A; this is clarified in the first meeting.

A. Organisation and Proposal Details

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Organisation and legal entities in scope — single company or group**	Cover, 1. Executive Summary — «CUSTOMER», «legal entities in scope»	
○	Proposal addressee — name, title, unit	Cover, 9. Proposal Terms — «full name», «title»	
○	Proposal date and expected decision date	Cover «dd Month yyyy», 9. validity «proposal date + 1 month»	
○	Is there an RFP or specification	Structure of the proposal, 2.4 source column «RFP / statement»	
○	Procurement process and approval steps	9. Proposal Terms	

B. Decision — What the Assessment Will Support

The output of a readiness engagement is not a maturity grade but a decision per use case on whether it can start. Before that decision, A shows in a short time how far the candidate use cases meet the prerequisites; on its own it does not support an AI investment or platform decision.

If the decision the customer expects is which use case starts on which date, or a plan for closing the missing prerequisites, the right service is B.

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Which decision will this assessment support — which use case to start with, AI investment, budget defence, a baseline before platform selection**	1. Executive Summary «DECISION», 2.1 Purpose of the Programme	
●	**Is the expected output the prerequisite gate per use case and a statement-based indicative result, or a level per dimension, readiness matrix and closing plan**	Service choice — A or B, 2.2 Services	
○	Has the AI investment decision been taken, or is it an option to be assessed	1. Executive Summary, 5.1 Assumptions	
○	Are there PoCs or pilots that never reached production; why did they stop	1. Executive Summary, P1 focus	

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
○	Has an AI initiative or assessment been carried out before; what was the outcome	5.1 Assumptions — «assumption — from input form»	

C. Sponsor and Management Access

> The gate cannot be checked without interviewing the use case owners. The sponsor is the person who opens access to the owners and the business units; if no sponsor is named, the interviews do not get into the calendar.

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Who is the sponsor — can a CDO, CTO or manager with decision authority be named**	7.3 Governance and Reporting, 5.3 Assumptions	
○	Will access to the use case owners be arranged through the sponsor or one by one	6. Project Plan, 7.2 Expected participation	
○	Who will make the decision, and by what date	6. Project Plan, 9. validity	
○	Who will the result be presented to — the technical team or senior management	1. Executive Summary, P4 read-out	

D. Candidate Use Cases

> The number of candidate use cases is the main sizing driver; narrowing the scope by use case is the most effective lever on the schedule.
>
> The assessment does not generate use case ideas; it assesses existing candidates. If no candidate has a named owner, the work stops in P0. A use case definition workshop is separate work and is discussed as follow-on work.

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Names and number of the candidate use cases**	Driver 1, 2.4 «USE CASES» and «N», 2.3 Prerequisite gate	
●	**Does each candidate have an owner (name, unit) and a measurable expected outcome**	Gate items 1 and 3, 2.3, 5.1 Assumptions	
○	Which candidates have priority; who set the priority	P1 focus, 5.1 Assumptions	
○	Are any use cases, units or legal entities to be excluded from scope	2.5 Out of Scope	
○	If no candidate has an owner, has a use case definition workshop been discussed	2.5 Out of Scope, follow-on proposal	
○	Sector annex for the question sets — none, Banking, Insurance or other (name it)	Question sets — sector annex sheet	

E. Scale

> In A, scale values are taken as statements and are not verified. The number of interviews sets the schedule: for each candidate use case at least the owner and the person responsible for the related data are interviewed.

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Estimated number of people to interview and their split by business unit**	Driver 3, 2.4 «N», 6. Project Plan, 7.2	
○	Number of business units in scope	Driver 2, 2.4 «N»	

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
○	Number of legal entities or locations	Driver 6, 2.4 «N»	

F. Prerequisite Gate — Check per Use Case

The main output of A is the status of these six items for each candidate use case. The question here is not whether an item is met, but whether it can be checked in P1 through documents and interviews; a “no” does not stop the proposal, it is the first finding.

An item that cannot be checked is not estimated; it is reported as “Not assessed”. The definition of the gate items and the per-use-case table are in the worksheet section of the form.

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Can the six gate items be checked for each candidate use case through documents and interviews**	2.3 Prerequisite gate, 3. Methodology, 5.2 Evidence and access	
○	Item 1 · Defined use case — can a written use case definition with owner, outcome and data need be shared	2.3, P1 evidence collection, 5.2	
○	Item 2 · Real data access — can an access request record or sample data be shown per use case	2.3, P1, 5.2	
○	Item 3 · Decision-making owner — can an assignment letter or written appointment be shown per use case	2.3, P1, 5.2	
○	Item 4 · Path to production — can where the model or agent runs and who operates it be documented or explained	2.3, P1, 5.2	
○	Item 5 · Legal basis — can a written legal or compliance opinion be shared for use cases using personal data	2.3, P1, 5.2	
○	Item 6 · Decision role and autonomy boundary — can it be shown which outputs require human review and who decides	2.3, P1, 5.2	
○	How many AI systems are in production (statement)	Driver 4, 2.4 «N»	
○	Number of data sources the candidate use cases need (statement)	Driver 5, 2.4 «N», 2.5 Out of Scope	

G. Access to Documents and Interviews

The evidence sources of A are documents and interviews; Komtaş is not given system access. Where there is no document, the related gate item stays statement-based and this is marked separately in the result.

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Can use case documents, AI policies, the AI inventory and role definitions be shared**	P1 evidence collection, 5.2 Evidence and access	
○	Can use case owners and business unit representatives be interviewed	7.2 Expected participation, 6. Project Plan	
○	Can the data team, platform / IT and legal / compliance be interviewed	7.2 Expected participation	
○	Will the interviews be held remotely, on site or hybrid	5.4 «remotely / on site / hybrid»	

H. Commercial Framework

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
○	Is there an approved budget	8. Project Fees — «fee»	
○	Is there a schedule constraint — budget period, management presentation, regulatory date	6. Project Plan	
○	Are there competitors, and who	Emphasis and section weights	
○	Will B or a Grounded Intelligence pilot also be discussed after the assessment	2.5 Out of Scope, follow-on proposal	

Prerequisite Gate — Worksheet per Use Case

#	PREREQUISITE	HOW IT IS VERIFIED	IF NOT MET
1	Defined use case — owner, measurable outcome and data need are in writing	Use case document or written definition	There is no readiness to assess; the work turns into a use case definition workshop
2	Real data access — access to the data the use case needs has been granted; knowing that the data exists is not enough	Access request record or sample data	No start date can be given; getting access may take longer than the project itself
3	Decision-making owner — a person on the business side with a written assignment who can decide scope and acceptance	Assignment letter or written appointment	The initiative becomes an internal project of the technical team; the process does not change
4	Path to production — where the model or agent will run, how it will be monitored and who will operate it	Platform definition or service agreement	The pilot succeeds but does not reach production — the most common failure
5	Legal basis — where personal or regulated data is used, a legal basis exists	Written opinion of the legal or compliance unit	The initiative stops at deployment; this cannot be fixed afterwards
6	Decision role and autonomy boundary — which outputs inform, draft or recommend, which require human review, who decides	Decision-rights record or workflow design with review checkpoints	Accountability for outcomes is unclear; the use case cannot be defended to risk, legal and the regulator

The candidate use cases from section D are entered here. In A, verification is through documents and interviews only. The item columns are filled with a first estimate in P0 and with evidence in P2: Met · Partly met · Not met · Not assessed.

#	USE CASE	OWNER	1 DEFINED	2 DATA	3 DECISION	4 PRODUCTION	5 LEGAL	6 ROLE
1								
2								
3								
4								
5								

GAP TYPE — Blocking: must be closed before any pilot. Manageable: a pilot is possible with a compensating control and monitoring. Not met is always Blocking. Partly met or Not assessed is Blocking or Manageable on the evidence; a missing owner or a missing legal basis is always Blocking.

INDICATIVE RESULT RULE — any Blocking gap: Not ready. Only Manageable gaps: Conditional. No gap and no item left Not assessed: Ready to start. The result is marked as statement-based; no use case coming out Ready to start is also a valid result.

Band Estimate — Service A

A uses six of the ten drivers; the four drivers specific to B are not asked in A. The band is the highest band that at least three drivers fall into.

#	DRIVER	SMALL	MEDIUM	LARGE	RESULTING BAND
1	Number of candidate use cases	≤ 5	5 – 15	> 15	
2	Number of business units in scope	1 – 2	3 – 6	> 6	
3	Number of people to interview	≤ 10	10 – 25	> 25	
4	Number of AI systems in production	0 – 2	3 – 10	> 10	
5	Number of data sources in scope	≤ 5	5 – 15	> 15	
6	Number of legal entities or locations	1	2 – 3	> 3	
	RESULT — selected band	1 week · 6 pd	1.5 weeks · 9 pd	2 weeks · 12 pd	

CUSTOMER EFFORT — small 3 days · medium 4 days · large 5 days. The load comes from use case owner and business unit interviews and grows with the number of candidate use cases; stated in section 7.2 of the proposal.

PHASE BREAKDOWN — P0 Scope 1 day · P1 Documents and use case interviews 3–4 days · P2 Gate check and report 2 days · P4 Read-out and validation 1 day. A has no P3.

KOMTAŞ TEAM — Assessment Lead · AI / ML Consultant · Data Architect; stated in section 7.1 of the proposal.

If B is taken after A, the evidence inventory of A is reused in B and deducted from B's effort.

Service Selection Check

Before filling in the form, make sure that A is the right service.

STATUS	RIGHT SERVICE
A short, statement-based first view of whether the candidate use cases can start today is required	A
A level per dimension (current and target) and a readiness matrix with earliest start dates are required	B
A prerequisite closing plan and the items to hand over to the data and context layers are required	B
First contact, budget unclear, a quick output is required	A
No candidate use case has an owner; generating use case ideas is required	Not the subject of this package — use case definition workshop, separate work
Setting up the AI inventory, approval mechanism and risk classification in depth is required	AI Governance Readiness Assessment — separate service
The problem appears to sit in the data foundation itself	Lakehouse Assessment / DWH Assessment
Building the solution for a use case that passes the gate — model, agent or grounded decision support — is required	Grounded Intelligence pilot — separate service

Blocker Checklist

SECTION	BLOCKER QUESTION	ANSWERED?
A	Organisation and legal entities in scope — single company or group	
B	Which decision will this assessment support — which use case to start with, AI investment, budget defence, a baseline before platform selection	
B	Is the expected output the prerequisite gate per use case and a statement-based indicative result, or a level per dimension, readiness matrix and closing plan	
C	Who is the sponsor — can a CDO, CTO or manager with decision authority be named	
D	Names and number of the candidate use cases	
D	Does each candidate have an owner (name, unit) and a measurable expected outcome	
E	Estimated number of people to interview and their split by business unit	
F	Can the six gate items be checked for each candidate use case through documents and interviews	
G	Can use case documents, AI policies, the AI inventory and role definitions be shared	

IF A BLOCKER IS MISSING — no proposal is written. If one must be written, each missing item is entered as an assumption in section 5 of the proposal in place of «assumption — from input form».

The first two rows of section D are a special case: without the candidate use cases and their owners, no band can be chosen and the scope of the gate check cannot be written.
