AI & AGENTIC READINESS · SERVICE B

AI & Agentic Readiness Assessment — Proposal Input Form

Readiness of the candidate use cases — generative AI, LLM and agentic systems, and classic ML where relevant: information to be collected in the customer meeting and the proposal field each item fills. Once the form is completed and returned, the proposal text is produced.

Rows marked ● are BLOCKERS — the proposal cannot be written without them and they cannot be filled with assumptions.

If rows marked ○ remain missing, they are written into the proposal as assumptions and go to section 5.

If the answer to a question is “we don’t know”, that is also an answer — it is often the first finding and goes into the proposal as an assumption.

THE NUMBER OF USE CASES AND THE INTERVIEW PLAN SET THE SCHEDULE: for each candidate use case the owner, the data team and, where needed, legal / compliance are interviewed. The main constraint on the schedule is not access approval but the senior management and business unit calendar; it cannot be shortened by adding people on the Komtaş side.

The evidence is mostly organisational — documents, role definitions, decision records, interviews. This package has no access model choice. AI inventory records, pilot and production counts and platform usage data are used as measurement evidence if the customer shares them.

THIS FORM IS FOR SERVICE B — the eight dimensions (D1–D8) are placed on the four-level ladder L1 Exploratory · L2 Pilot Ready · L3 Production Ready · L4 Scalable (current and target; per use case where relevant); the six-item gate is run separately for each use case and every gap is classified Blocking or Manageable; a use case readiness matrix with earliest start dates, a readiness summary per use case that is also the closing plan (dimension · current state · primary gaps · gap type · recommended action · owner · target date, tied to the phase gates), handover items to the lower layers and routing are produced. There is no weighted score and no institution-level aggregate.

The report opens with a decision sentence, not with a maturity level: “use case X can start on date Y; use case Z cannot start until … is closed.”

If the customer only wants a short first view of whether the candidate use cases can start today, the right service is A and A’s own input form is used.

If an A engagement has previously been carried out for this customer, the evidence inventory produced is reused and deducted from B’s effort — this is stated in the proposal.

A. Organisation and Proposal Details

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Organisation and legal entities in scope — single company or group**	Cover, 1. Executive Summary — «CUSTOMER», «legal entities in scope»	
○	Proposal addressee — name, title, unit	Cover, 9. Proposal Terms — «full name», «title»	
○	Proposal date and expected decision date	Cover «dd Month yyyy», 9. validity «proposal date + 1 month»	
●	**Is there an RFP or specification; if so, its number and response format**	Structure of the whole proposal, 2.4 source column «RFP / statement»	
○	Procurement process and approval steps	9. Proposal Terms	

B. Decision — What the Assessment Will Support

> The output of a readiness assessment is not a maturity grade but a decision per use case on whether it can start.
> If this section cannot be answered, the report does not know what to tell whom, and its price cannot be defended.

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Which decision will this assessment support — which use case to start and when, AI investment, budget defence, roadmap, a baseline before platform selection**	1. Executive Summary «DECISION», 2.1 Purpose of the Programme	
○	Has the AI investment decision been taken, or is it an option to be assessed	1. Executive Summary, 5.1 Assumptions	
○	Are there PoCs or pilots that never reached production; why did they stop	Dimensions D1 and D7, recurring pattern check	
○	Has an AI initiative been tried before; what was the outcome	5.1 Assumptions, P1 focus dimensions	
○	How will success be measured — which outcome counts as “done”	1. Executive Summary	

C. Sponsor and Senior Management Access

> This assessment is not carried out without interviewing the use case owners. If access to the senior management calendar is hard, P1 extends; this cannot be offset by adding people.

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Who is the sponsor — can a CDO, CTO or manager with decision authority be named**	7.3 Governance and Reporting, 5.3 Assumptions	
●	**How will access to the use case owners and the senior management calendar be arranged — easy, medium, hard**	Driver 9, 2.4 «CALENDAR ACCESS», 6. Project Plan, 7.2	
○	Who will make the decision, and by what date	6. Project Plan, 9. validity	
○	Who will the report be presented to — the technical team or senior management	1. Executive Summary, 4. Deliverables	

D. Candidate Use Cases

> The number of candidate use cases is the main sizing driver; narrowing the scope by use case is a far more effective lever on the schedule than reducing the number of dimensions.
>
> The assessment does not generate use case ideas; it assesses and ranks existing candidates. A candidate without an owner gets Not ready in the matrix; if no candidate has a named owner, the work stops in P0 and a use case definition workshop is discussed as separate work.

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Names and number of the candidate use cases**	Driver 1, 2.4 «USE CASES» and «N»	
●	**Does each candidate have an owner (name, unit) and a measurable expected outcome**	Gate items 1 and 3, dimension D1, 5.1 Assumptions	
○	Is it known which data each candidate needs	Gate item 2, dimensions D1 and D3	
○	Is the role of the system in the decision defined for each candidate — inform, draft, challenge, recommend or route / execute; which outputs require human review	Gate item 6, dimension D2	

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
○	Which candidates have priority; who set the priority, and by what method	Dimension D1, P1 focus	
○	Are any use cases, units or legal entities to be excluded from scope	2.5 Out of Scope	

E. Scale and Interview Plan

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Estimated number of people to interview and their split by business unit — use case owner, data team, legal / compliance**	Driver 3, 2.4 «N», 6. Project Plan, 7.2	
○	Number of business units in scope	Driver 2, 2.4 «N»	
○	Will business unit representatives take part in the interviews	Dimension D8, 7.2	
○	Will the engagement be run remotely, on site or hybrid	5.4 «remotely / on site / hybrid»	

F. Dimension Scope

> All eight dimensions are in scope by default. If a dimension is excluded, the gate item it feeds stays statement-based only; this is written into the proposal as a constraint.

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Are all eight dimensions (D1–D8) in scope; is any dimension to be excluded**	2.3 Assessment Dimensions, «OUT-OF-SCOPE DIMENSION»	
○	Is any dimension to be covered in more depth	P1 focus dimensions, 3. Methodology	
○	Sector annex for the question sets — none, Banking, Insurance or other (name the sector)	Question sets — sector annex sheet, dimension D6, P1 interview focus	

G. Data and Context Foundation

> The most frequent finding of the assessment is that the gap is not on the AI side but in the two layers below — the data foundation and context. This section feeds dimensions D3 and D4 and the second gate item.
>
> The maturity of the data foundation itself is the subject of the Lakehouse Assessment or the DWH Assessment, and in-depth data quality measurement is separate work; here, accessibility and the existence of quality measurement are assessed.

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Can the data the candidate use cases need be accessed today — has access been granted or is a request needed; what is the typical access time**	Gate item 2, dimension D3	
○	Number of data sources in scope	Driver 5, 2.4 «N»	
○	Is there a central data platform — lakehouse, data warehouse or other	Dimension D4, 2.5 Out of Scope	
○	Is data quality measured; can the measurement results be shared	Dimension D3, 5.2 — measurement evidence	
○	Are the policy and reference documents the use cases rely on versioned; is free-text evidence (notes, reports) usable	Dimension D3	

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
○	Are model scores, signals or reason codes available to the use cases at the time of use; how fresh are they	Dimension D4	
○	Is there glossary, master data, ontology, knowledge graph or semantic layer work; is unstructured content in scope	Dimension D3, handover items	

H. Platform and Path to Production

> The path to production is the fourth gate item and the one most often skipped; it is the cause of the PoC graveyard. The platform is covered only for its ability to serve and operate models and agents; product or platform selection is not the subject of this assessment.

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Is the path to production defined — where does the model or agent run, who approves, who operates**	Gate item 4, dimensions D5 and D7	
○	How many AI systems are in production	Driver 4, 2.4 «N»	
○	Is an AI / ML platform or LLM provider used today; in which environment	Dimensions D5 and D6	
○	Is there a defined process for model development, testing, deployment and monitoring (performance, drift, cost)	Dimension D7	
○	Is there an evaluation corpus for the use cases (test questions with expected answers) — exists, planned, missing	Dimension D7	
○	Has a compute, GPU or API budget been allocated	Dimension D5, 5.1 Assumptions	

I. Governance, Regulation and Documentation

> The legal basis is the fifth gate item; a missing legal basis is always a Blocking gap and the use case gets Not ready even if the other five items are met. Dimension D6 only checks whether an inventory, an approval mechanism and a risk classification exist; AI governance itself is the subject of the AI Governance Readiness Assessment.

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Degree of regulation — low, medium, high; which regulation, which authority**	Driver 7, 2.4 «REGULATION LEVEL», dimension D6	
●	**Documentation maturity — are use case documents, AI policy, role definitions and architecture written, partial or absent**	Driver 8, 2.4 «DOCUMENTATION STATUS», 5.2	
●	**Do the candidate use cases process personal data; if so, has the legal basis been determined**	Gate item 5, dimension D6	
○	Is an AI inventory kept; are an approval mechanism and a risk classification defined	Dimension D6, 5.2 — measurement evidence	
○	Will the legal and compliance unit take part (KVKK, sector rules)	Dimension D6, 7.2 Expected participation	

J. Organisation, Skills and Adoption

> The decision-making owner is the third gate item. If the process that uses the output does not change, the model stays in production but does not enter any decision. Answers are usually optimistic; verification in P1 is based on named people and written appointments.

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Does each candidate use case have an owner with a written assignment who can decide scope and acceptance**	Gate item 3, dimensions D1 and D8	
○	Is there an AI or data science team; how many people; how far does it depend on external resources	Dimension D8	
○	Number of legal entities or locations	Driver 6, 2.4 «N»	
○	Will the data team and platform / IT take part in the interviews	7.2 Expected participation	
○	Is there a change management or training function	Dimension D8	

K. Target Levels and Start Dates

> The earliest start date is set with evidence in P2; a difference from the expected date is explained in the report.
>
> Target levels are the organisation's decision, set jointly in P0 if missing. L2 Pilot Ready is the target for a controlled pilot, L3 Production Ready for production.

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
○	Which use case should start first; why	P2 readiness matrix, 5.3 Assumptions, 4. Deliverables	
○	Target start date for this use case	1. Executive Summary — decision sentence, 6. Project Plan	
○	Can a target level (L1–L4) be set for each dimension; who sets it — answers go in the table below	2.3 Assessment Dimensions, P0 deliverable, 5.3	
○	Will the target level differ by use case	P0 deliverable, 5.3 Assumptions	

Target level per dimension; add the use case name if it differs. If unknown, leave blank.

	DIMENSION	WHERE IT FILLS IN THE PROPOSAL	TARGET LEVEL (L1–L4) AND SET BY
○	D1 Strategic & Business Readiness	P0 deliverable, 5.3 Assumptions	
○	D2 Decision Process & Functional Readiness	P0 deliverable, 5.3 Assumptions	
○	D3 Data & Knowledge Readiness	P0 deliverable, 5.3 Assumptions	
○	D4 Analytical Grounding Readiness	P0 deliverable, 5.3 Assumptions	
○	D5 Architecture, Technology & Integration Readiness	P0 deliverable, 5.3 Assumptions	
○	D6 Security, Governance & Control Readiness	P0 deliverable, 5.3 Assumptions	
○	D7 Operating Model, Validation & Lifecycle Readiness	P0 deliverable, 5.3 Assumptions	
○	D8 People, Adoption & Change Readiness	P0 deliverable, 5.3 Assumptions	

L. Previous Work

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
○	Previous AI, data or readiness assessment — yes, partial, no	Driver 10, 2.4 «PREVIOUS ASSESSMENT», 5.1, baseline comparison	
○	Pilots started so far, how many reached production; records kept	Dimension D7, 5.2 — measurement evidence	

M. Commercial Framework

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
○	Is there an approved budget	8. Project Fees — «fee»	
○	Schedule constraint — budget, management or regulatory dates	6. Project Plan	
○	Are there competitors, and who	Emphasis and section weights	
○	Will a Grounded Intelligence pilot or data foundation work follow	2.5 Out of Scope, follow-on proposal	

Use Case Inventory — Worksheet

The answers from sections D and K are entered here. The gate columns are filled with a first estimate in P0 and with evidence in P2: Met · Partly met · Not met · Not assessed. This table is the input to the readiness matrix.

Gate columns — 1 DEFINED: are the use case, its measurable outcome and data need written down · 2 DATA: has access to the required data been granted · 3 DECISION: is a decision-making owner assigned · 4 PRODUCTION: is the path to production defined · 5 LEGAL: has the legal basis been determined · 6 ROLE: are the decision role and autonomy boundary defined. TARGET START: the date the customer expects.

#	USE CASE	OWNER	1 DEFINED	2 DATA	3 DECISION	4 PRODUCTION	5 LEGAL	6 ROLE	TARGET START
1									
2									
3									
4									
5									
6									
7									
8									

Every gap is classified: Blocking (must be closed before any pilot) or Manageable (a pilot is possible with a compensating control and monitoring). Not met is always Blocking; Partly met or Not assessed is Blocking or Manageable on the evidence; a missing owner or a missing legal basis is always Blocking. Any Blocking gap: Not ready. Only Manageable gaps: Conditional. No gap and no item left Not assessed: Ready to start. A high level in other dimensions does not offset a Blocking gap; it usually sits in a lower layer and becomes a handover item to the data or context side.

Each gap is entered in the readiness summary of the use case with a recommended action, an owner and a target date, tied to a phase gate: Approve development → Launch controlled pilot → Transition to production → Scale to adjacent use cases.

If the whole table comes out Not ready, the result is that the organisation cannot start any candidate use case today; this is also a valid assessment result.

Band Estimate — Worksheet

Completed after the answers are collected. The band is the highest band that at least three drivers fall into; a single large driver does not carry the band.

The durations below apply to Service B. For A, 1 / 1.5 / 2 weeks (6 / 9 / 12 pd) apply; A uses only drivers 1–6 and has its own input form.

#	DRIVER	SMALL	MEDIUM	LARGE	RESULTING BAND
1	Number of candidate use cases	≤ 5	5 – 15	> 15	
2	Number of business units in scope	1 – 2	3 – 6	> 6	
3	Number of people to interview	≤ 10	10 – 25	> 25	
4	Number of AI systems in production	0 – 2	3 – 10	> 10	
5	Number of data sources in scope	≤ 5	5 – 15	> 15	
6	Number of legal entities or locations	1	2 – 3	> 3	
7	Degree of regulation	Low	Medium	High	
8	Current documentation maturity	Written	Partial	None	
9	Access to senior management calendar	Easy	Medium	Hard	
10	Previous assessment	Yes	Partial	No	
	RESULT — selected band and duration	3 weeks · 22 pd	3.5 weeks · 28 pd	4 weeks · 34 pd	

CUSTOMER EFFORT — small 6 days · medium 8 days · large 10 days. The load comes from use case owner, data team and legal / compliance interviews and grows with the number of candidate use cases; this expectation is stated explicitly in section 7.2 of the proposal.

PHASE BREAKDOWN (medium band indication) — P0 Scope 2 days · P1 Evidence and interviews 1–1.5 weeks · P2 Placement, gate and readiness matrix 3 days · P3 Closing plan and handovers 1 week · P4 Validation and publication 2 days.

The duration is set by the interview schedule, not by technical measurement. If driver 1 or 9 falls into the large band, the schedule extends even if the other drivers fall into the small band.

Blocker Checklist

These rows must be answered before proposal writing starts.

SECTION	BLOCKER QUESTION	ANSWERED?
A	Organisation and legal entities in scope — single company or group	
A	Is there an RFP or specification; if so, its number and response format	
B	Which decision will this assessment support — which use case to start and when, AI investment, budget defence, roadmap, a baseline before platform selection	
C	Who is the sponsor — can a CDO, CTO or manager with decision authority be named	
C	How will access to the use case owners and the senior management calendar be arranged — easy, medium, hard	
D	Names and number of the candidate use cases	
D	Does each candidate have an owner (name, unit) and a measurable expected outcome	
E	Estimated number of people to interview and their split by business unit — use case owner, data team, legal / compliance	
F	Are all eight dimensions (D1–D8) in scope; is any dimension to be excluded	
G	Can the data the candidate use cases need be accessed today — has access been granted or is a request needed; what is the typical access time	
H	Is the path to production defined — where does the model or agent run, who approves, who operates	
I	Degree of regulation — low, medium, high; which regulation, which authority	
I	Documentation maturity — are use case documents, AI policy, role definitions and architecture written, partial or absent	
I	Do the candidate use cases process personal data; if so, has the legal basis been determined	
J	Does each candidate use case have an owner with a written assignment who can decide scope and acceptance	

IF ANY BLOCKER IS MISSING — the proposal is not written. If it must be written, each missing item is written into section 5 of the proposal as an assumption, and it is stated that the scope will be reassessed if that assumption does not hold.

The first two rows of section D are a special case: without the candidate use cases and their owners, no band can be chosen, no interview plan can be set up and no schedule can be given.
