AI & AGENTIC READINESS — INFORMATION GATHERING FORM

Information needed to determine the service to be proposed, its scope and duration. Numerical answers may be given as approximate values. The SERVICE column shows which service the question is required for (A · AI & Agentic Readiness Check, B · AI & Agentic Readiness Assessment), and the SECTION column the related assessment dimension (D1–D8). The Banking Annex and Insurance Annex sheets are optional.

#	SECTION	SERVICE	QUESTION	ANSWER	ADDITIONAL NOTES
1	Scope and Expectations	A · B	What decision is this work expected to support (which use case to start and when, AI investment or budget planning, roadmap, preparation before platform selection, etc.)? By when and by whom is the decision expected to be made?		
2	Scope and Expectations	A · B	Which of the following is closest to the expected outcome: determining whether the prerequisites are met for the candidate use cases, with an indicative ready-to-start result; or current and target level in eight dimensions with a use case readiness matrix showing the earliest start dates and a prerequisite closing plan?		
3	Scope and Expectations	A · B	Which candidate use cases are expected to be assessed; approximately how many are there? Has an owner who can make decisions and a measurable expected outcome been defined for each candidate?		
4	Scope and Expectations	A · B	How many pilots or PoCs have been started so far, and how many of them have been taken into production? Why did those that did not reach production stop (no defined path to production, data not accessible in the expected form, no owner, no measurable target defined, etc.)?		
5	Scope and Expectations	A · B	Which business units, legal entities and locations are expected to be in scope?		
6	Scope and Expectations	A · B	Has an AI readiness, AI strategy or data assessment been carried out before; if so, can its results be shared?		
7	D1 · Strategic & Business	B	For the candidate use cases, have the problem to be solved, a baseline showing the current situation and a success criterion been defined? Has it been assessed whether a conventional analytical, rules or workflow solution would be sufficient instead of AI?		
8	D2 · Decision Process & Functional	A · B	For the candidate use cases, have the AI system's role in the decision process (providing information, drafting, checking and challenging, recommending, triggering actions), the outputs that require human approval and who makes the final decision been determined?		
9	D3 · Data & Knowledge	A · B	Approximately how many data sources (systems, data sets, document sources) do the candidate use cases need?		
10	D3 · Data & Knowledge	B	How does a new data access request work, and how long does it typically take; can the access request records be shared? Are the policy, procedure and reference documents the use cases will rely on kept current and versioned?		
11	D4 · Analytical Grounding	B	Are the model scores, risk signals or other analytical outputs the candidate use cases will use accessible at the time of use, and do they include the factors that drive the result (reason codes)? Is there a central data platform (data warehouse, lakehouse, etc.) that feeds these outputs?		
12	D5 · Architecture, Technology & Integration	A · B	Is there a defined path for taking a model or AI application into production (approval, deployment environment, operating responsibility)? Is an AI / ML platform or LLM provider in use; is there an organisational decision on the use of external (hosted) models?		
13	D6 · Security, Governance & Control	A · B	Do the candidate use cases process personal data? Which regulations is the organisation subject to (KVKK, sector regulations), and would the degree of regulation be described as low, medium or high?		
14	D6 · Security, Governance & Control	B	Is an inventory of AI systems kept; are risk classification and an approval mechanism defined? Is the documentation on AI strategy, architecture, policy and role definitions written, partly defined, or not defined?		

#	SECTION	SERVICE	QUESTION	ANSWER	ADDITIONAL NOTES
15	D7 · Operating Model, Validation & Lifecycle	A · B	Are there AI systems (model, agent, LLM-based application) running in production; approximately how many?		
16	D7 · Operating Model, Validation & Lifecycle	B	Is there a test and evaluation set (evaluation corpus) prepared to measure the output quality of AI applications, and a monitoring process in production? Have business, technical, content and validation owners been assigned for these applications?		
17	D8 · People, Adoption & Change	B	Are training and change management planned for the users whose processes will change? Are subject matter experts involved in design and testing; is there an approach for when users should question an AI output?		
18	Ways of Working	A · B	Who is the sponsor of the work (CDO, CTO or equivalent)? Is access to the calendars of senior management and use case owners easy, medium or hard?		
19	Ways of Working	A · B	What is the approximate number of people expected to be interviewed and their distribution (use case owners, business units, data, platform, model risk, legal)?		
20	Ways of Working	A · B	Can the use case definitions, AI policy, AI inventory and role definitions be shared as part of the work?		
21	Ways of Working	B	Can the legal and compliance unit and representatives of the business units whose processes will change take part in the work?		
22	Ways of Working	A · B	Is the work expected to be carried out remotely, at the customer's premises or in a hybrid way?		
23	Ways of Working	A · B	Is there an RFP or specification; how does the procurement process work, and are there any timing constraints (budget period, management presentation, regulatory deadline, etc.)?		

BANKING ANNEX — OPTIONAL QUESTIONS

This sheet is optional and has been prepared only for organisations in the banking sector. The questions cover how the topics of the main question set apply to banking decision processes. The answers do not change the service to be proposed; the interview plan and the document list for the first week of the assessment are prepared from them. Questions whose answers are not known may be left blank.

#	SECTION	SERVICE	QUESTION	ANSWER	ADDITIONAL NOTES
1	D1 · Strategic & Business	A · B	Which of the following decision areas do the use cases to be assessed relate to: credit policy and rule refinement, corporate / SME credit assessment support, collections, customer retention and early detection of silent deterioration, portfolio signal interpretation, other?		
2	D2 · Decision Process & Functional	A · B	In these areas, how are exception, override and referral decisions made; is the rationale for these decisions recorded in writing?		
3	D2 · Decision Process & Functional	B	For credit decisions, have the role of the AI output (providing information, drafting the credit memo, checking and challenging, recommending) and who keeps the final decision authority been determined; have credit committee processes been reviewed from this angle?		
4	D3 · Data & Knowledge	B	Are credit memos, relationship manager meeting notes, collections call notes and complaint records kept electronically and in a searchable form?		
5	D3 · Data & Knowledge	B	Are the credit policy, rule sets and procedures kept versioned; are past rule changes and their rationale recorded?		
6	D4 · Analytical Grounding	B	Are credit scores, PD / LGD models, early warning signals, collections segmentation and churn scores accessible at the time of use; do these outputs include the factors that drive the result (reason codes)?		
7	D4 · Analytical Grounding	B	Are event-driven signals produced that show behavioural change between model refresh cycles (payment trend, contact response rate, broken payment commitments, salary redirected to another institution, etc.)?		
8	D4 · Analytical Grounding	B	Are approval, decline and override rates for credit rules tracked rule by rule?		
9	D5 · Architecture, Technology & Integration	B	Can the credit assessment, collections and customer relationship (CRM) systems be accessed through APIs; are customer and transaction identifiers consistent across systems?		
10	D6 · Security, Governance & Control	A · B	Under BDDK regulations, is there an internal assessment or approval process for outsourcing, cloud services and processing data abroad; has the use of external LLMs been assessed in this framework?		
11	D6 · Security, Governance & Control	B	Do model risk management and the model validation unit cover AI-assisted decision processes and generative AI systems; is there an internal standard for the explainability of credit decisions?		
12	D6 · Security, Governance & Control	A · B	Is there an internal policy, information security assessment or legal opinion on processing customer data and information classed as bank secrets in AI systems?		
13	D7 · Operating Model, Validation & Lifecycle	B	Are the later outcomes of credit and collections decisions (default, recovery, customer loss) recorded case by case; can these records be used to prepare an evaluation set (evaluation corpus) for testing AI outputs?		
14	D8 · People, Adoption & Change	B	Can subject matter experts from the credit allocation, collections and relationship manager teams take part in design and testing?		

INSURANCE ANNEX — OPTIONAL QUESTIONS

This sheet is optional and has been prepared only for organisations in the insurance sector. The questions cover how the topics of the main question set apply to insurance decision processes. The answers do not change the service to be proposed; the interview plan and the document list for the first week of the assessment are prepared from them. Questions whose answers are not known may be left blank.

#	SECTION	SERVICE	QUESTION	ANSWER	ADDITIONAL NOTES
1	D1 · Strategic & Business	A · B	Which of the following decision areas do the use cases to be assessed relate to: underwriting, claims assessment, fraud detection, customer service, renewal and retention, other?		
2	D2 · Decision Process & Functional	A · B	How are underwriting exceptions, claims payment approvals and referrals in case of suspected fraud decided; are authority limits defined?		
3	D2 · Decision Process & Functional	B	Has it been determined in which decisions the AI output only provides information or drafts and in which it recommends; is human approval foreseen for outputs sent directly to customers?		
4	D3 · Data & Knowledge	B	Are policy, quotation and claims files (loss adjuster reports, photographs, invoices, scanned documents) kept electronically and in a searchable form?		
5	D3 · Data & Knowledge	B	Are product terms, general and special conditions, underwriting guidelines and tariffs kept versioned; can the version valid at the policy date be determined?		
6	D3 · Data & Knowledge	B	Are call centre records, complaints and customer correspondence in scope; are audio recordings transcribed to text?		
7	D4 · Analytical Grounding	B	Are risk scores, fraud scores, claims cost estimates and churn models accessible at the time of use; do these outputs include the factors that drive the result?		
8	D5 · Architecture, Technology & Integration	B	Can the policy administration, claims management and customer relationship (CRM) systems be accessed through APIs; is the data coming from agency and broker channels consistent with these systems?		
9	D6 · Security, Governance & Control	A · B	Will special category personal data such as health data be processed in the use cases; if so, has the legal basis under KVKK been determined?		
10	D6 · Security, Governance & Control	A · B	Under SEDDK regulations, is there an internal assessment or approval process for outsourcing, cloud services and automated decision processes?		
11	D6 · Security, Governance & Control	B	For decisions that may have an adverse outcome for the customer, such as fraud findings or claim rejection, are explaining the rationale to the customer and an appeal process defined?		
12	D7 · Operating Model, Validation & Lifecycle	B	Are the outcomes of claims and fraud decisions (payment, rejection, appeal, confirmed fraud) recorded case by case; can these records be used to prepare an evaluation set (evaluation corpus) for testing AI outputs?		
13	D8 · People, Adoption & Change	B	Can subject matter experts from the underwriting, loss adjusting, claims and customer service teams take part in design and testing?		

INFORMATION NOTE

Purpose of the form	This form has been prepared to collect the information needed to select the service to be proposed under AI & Agentic Readiness and to determine the scope, duration and team composition of the work. The assessment covers readiness for AI use cases including generative AI, LLM and agentic systems, and classic ML where relevant.
Two services	A — AI & Agentic Readiness Check: a check, based on documents and interviews, of the six-item prerequisite gate (defined use case, real data access, owner who can make decisions, path to production, legal basis, decision role and autonomy boundary) for each candidate use case; the result is the status of each item and an indicative, statement-based ready-to-start result per use case (Ready to start / Conditional / Not ready). B — AI & Agentic Readiness Assessment: current and target level in eight dimensions, a use case readiness matrix showing the earliest start dates, a prerequisite closing plan that classifies each gap as Blocking (to be closed before any pilot) or Manageable (pilot possible with compensating controls and monitoring), and the items handed over to the data and context layers. The services are not mandatory continuations of one another; either can be the starting point.
Assessment dimensions	D1 Strategic & Business Readiness D2 Decision Process & Functional Readiness D3 Data & Knowledge Readiness D4 Analytical Grounding Readiness D5 Architecture, Technology & Integration Readiness D6 Security, Governance & Control Readiness D7 Operating Model, Validation & Lifecycle Readiness D8 People, Adoption & Change Readiness
Which question for which service	The SERVICE column shows which service the question is required for. If the service has not yet been decided, answering all questions is recommended. For A: 1–6, 8–9, 12–13, 15, 18–20, 22–23 For B: 1–23
Sector annexes	The Banking Annex (14 questions) and Insurance Annex (13 questions) sheets are optional and are answered only by organisations in the relevant sector. The column structure is the same as the main question set. The answers do not change the service to be proposed; the interview plan and the document list for the first week of the assessment are prepared from them.
Nature of the answers	Numerical answers may be given as approximate values; exact figures are not required. Questions whose answers are not known may be left blank.
System access	Neither service requires access to systems or data content for Komtaş. The work is carried out through documents (use case definitions, AI policy, AI inventory, role definitions) and interviews. In B, AI inventory records, pilot and production counts and data access request records are used as measurement evidence if the customer team shares them.
Candidate use case list	The assessment does not generate new use case ideas; it assesses the candidate use cases identified by the organisation. Each candidate needs an owner who can make decisions. If there is no candidate with an assigned owner, a use case definition workshop is needed first; this is a separate service and is proposed separately.
Questions left blank	Every topic left unanswered is stated as an assumption in the proposal. If the assumption does not hold, the scope and duration are re-evaluated. If interviews cannot take place on time, the related findings are reported as statement-based.
Not asked in this form	Prerequisite items, target maturity levels and the methodology to be applied are not asked in this form. These are proposed by Komtaş based on the answers given, presented in the proposal and finalised jointly at the start of the work. Model development, PoC, product selection, building the evaluation set (evaluation corpus), in-depth data quality measurement and a regulatory compliance statement are not within the scope of the assessment.
Confidentiality	The information shared is used only for preparing the proposal and is not shared with third parties.
