BI ASSESSMENT

BI Health Check and BI Modernization Assessment — blueprint

Internal reference: services, method, sizing and proposal set

1 **Where it sits**
The services in the data and AI value proposition; what is and is not assessed; seven recurring BI patterns. p. 2 – 6

2 **Two services**
BI Health Check and BI Modernization Assessment; six headings mapped to the twelve dimensions. p. 7 – 11

3 **Method**
Twelve dimensions, ladder, evidence, phases, result format per service, measures, target state decision. p. 12 – 20

4 **Komtaş side**
Roles, duration, effort and sizing, deliverables and proposal set, limits, package files and open items. p. 21 – 26

SECTION 1

Where It Sits

Where the services sit in the data and AI value proposition, what they do and do not assess, and the patterns they are built to show.

One question, four layers p. 3

AI value proposition in detail p. 4

What is assessed, what is not p. 5

Seven recurring BI patterns p. 6

Where It Sits — One Question, Four Layers

KOMTAS

An agent's answer is built from the layers below it. These services assess the consumption end of the bottom one: BI.

01 · WHY IT MATTERS

"What was net sales last quarter, by region?"

"412 million TL; highest in the Marmara region."
returned with its metric definition, source report and refresh time

Action 360
Intelligent Work Experience

Where the question is asked and the answer lands: Teams, Slack, portal, API.

Agent 360
Governed Digital Workforce

Turns the question into a query and acts on the result.

Context 360
Enterprise Context

Says what "net sales" means: glossary, ontology, semantic layer.

THESE SERVICES

Data / Analytic 360
Trusted Data Foundation

Holds and serves the data: DWH, lakehouse, BI models, reports and dashboards.

The answer travels back up — it is only as good as the bottom layer

WHERE WEAK BI SHOWS UP IN THE ANSWER

Net sales has three definitions

The answer depends on which report was read.

Metrics & Semantic Layer

4,000 reports, no owners

Nobody can say which dashboard is the right source.

Report Estate & Lifecycle

Night refresh failed unnoticed

The answer uses yesterday's numbers and does not say so.

Consumption Model & Performance

Exports bypass row-level security

The answer reaches people who should not see it.

Security & Trust

Where This Assessment Sits — AI Value Proposition

KOMTAS

Four layers. Each layer consumes the one below. This work measures the consumption end of the bottom layer — it does not build it.

Action 360

Intelligent Work Experience

Teams | Slack | WhatsApp | Web / Portal | Claude Desktop | API, Headless

Agent 360

Governed Digital Workforce

INDUSTRY: Manufacturing | Retail | Banking | Energy | Aviation | Other

FUNCTION: Customer Service | Sales | Finance | Procurement | Operations | Other

Context 360

Enterprise Context

Semantic Layer | Ontology | Knowledge Graph | Master Data | Corporate Memory

Data / Analytic 360

Trusted Data Foundation

THIS WORK · CONSUMPTION END

BI & Reporting | Datawarehouse | Lakehouse | Integration | Self-Service Analytics | Governance / MDM

The assessment measures the consumption end; it does not build it. Feeding platforms are covered only through their interface to BI; tool migration is proposed separately.

RELATION TO ADJACENT LAYERS

Relation to the feeding layers

The root cause of performance and freshness findings often sits in the DWH or lakehouse, not in BI.

Relation to Context 360

The semantic layer sits on top of this layer. If BI metric definitions are scattered, it has nothing firm to rest on.

Relation to Agent 360

An agent answers with the metric defined in BI. If the definition is not single, neither is the answer.

What It Assesses, What It Does Not

KOMTAS

The subject is the consumption layer; feeding platforms are covered only through their interface to BI

ASSESSED

- Metric definitions and semantic layer discipline
- Report and dashboard inventory, usage and unused report ratio
- Consumption data model, aggregation and model design
- Report performance, refresh times and freshness commitment
- Self-service scope, user skills and request queue
- Access control, sharing and export behaviour
- Trust in the numbers, reconciliation and data-error loop
- Licence use, distribution channels and number of tools

NOT ASSESSED

- The data warehouse's own capability — DWH Assessment
- The lakehouse's own capability — Lakehouse Assessment
- Source systems' architecture and source data quality
- Internal design of integration and ETL pipelines
- Master data management and golden record design
- Ontology, knowledge graph and agent development
- BI product selection and licence negotiation
- Report rebuild, model rewrite and tool migration

ROOT CAUSE MAY SIT BELOW; THE FINDING IS STILL RECORDED HERE

Many performance and freshness complaints start in the feeding layer (DWH or lakehouse). The finding is recorded and handed over in writing; a problem that cannot be solved on the BI side is not shown as a low level in a BI dimension.

MEASURES, DOES NOT BUILD

This work produces findings and a roadmap; it does not build reports, rewrite models or migrate tools. Migration is BI Migration (KARE URT-2026-001). Without this separation the assessment becomes the report of a party implementing its own recommendations and loses its independence.

NOT PRODUCT CHOICE

The assessment is independent of any BI vendor. The output is not “which tool to buy”, but how much of the existing investment can be kept, what needs to be redesigned, and which evidence that decision rests on.

Seven Recurring Patterns in BI Implementations

KOMTAS

Each is measurable; the assessment is not done to spot them but to show them with evidence

Report graveyard

Thousands of reports pile up and nobody knows which are used. None can be deleted, because nobody knows the owner.

Measured: total report count, share not opened in 90 days, share with a defined owner

Same metric, different number

The metric is recalculated in every report. Two teams bring different numbers and the debate moves from the data to the source.

Measured: definitions per same-named metric, share of reports fed from a central definition

BI tool as an extract tool

Users open the report, export to Excel at once and do the real work there. The tool becomes a doorway.

Measured: export action ratio, session length after export, reports dependent on extracts

Self-service in name, queue in practice

The tool is positioned as self-service, but every new report is requested from the central team. The queue runs for weeks.

Measured: users able to build reports, request queue length and average turnaround

Dashboard, no decision

A dashboard is published, launched in a meeting and never opened again. Usage is not measured, so nobody notices.

Measured: active user ratio, session frequency, reports used in decision meetings

Tool sprawl

Each business unit bought its own tool. One metric is defined in three tools; licence cost and training load triple.

Measured: BI tools in use, active users per tool, share of overlapping reports

Performance blamed on BI

Slowness usually comes from the feeding model or query engine, not the report. The tool is replaced; the problem stays.

Measured: report time split from source query time, refresh window and queue time

ALL SEVEN LOOK LIKE TOOL PROBLEMS; SIX ARE NOT

Report graveyards, multiple metric definitions and the escape to Excel are not solved by changing the tool; they come from missing definition ownership and lifecycle rules.
A tool change carries these patterns to the new tool. The roadmap therefore covers which rule is owned by whom, not only technical fixes.

SECTION 2

Two Services

BI Health Check and BI Modernization Assessment — what each covers, how long it takes, and how the six headings map to the twelve dimensions.

Which one fits p. 8

A · BI Health Check p. 9

B · BI Modernization Assessment p. 10

Heading mapping to the twelve dimensions p. 11

Two Services — Which One Fits

KOMTAS

BI Health Check and BI Modernization Assessment. Each can be taken on its own; neither is a mandatory step before the other.

02 · TWO SERVICES

p. 9

A BI Health Check

Assess current state · tool-agnostic

Focus	Six headings on the current BI estate
Scope	6 headings, tool-agnostic
Result	Red / amber / green per heading
Access	None — guided · documents, interviews, walkthroughs
Effort	Komtaş 6 · 9 · 12 pd · customer 2 · 3 · 4 days
Evidence	Statement · Document · Observation · Measurement
Weeks	S 1 · M 1.5 · L 2

p. 10

B BI Modernization Assessment

Define future state · current state included

Focus	Current state, target state and roadmap
Scope	12 dimensions, current and target
Result	Current and target level on a 5-level ladder
Access	Guided or read-only · Mode A guided or Mode B read-only, agreed in P0
Effort	Komtaş 22 · 28 · 34 pd · customer 5 · 6 · 8 days
Evidence	Statement · Document · Observation · Measurement
Weeks	S 3 · M 3.5 · L 4

WHICH ONE FITS · THE QUESTION ON THE TABLE DECIDES

Is an independent view of the main BI risks needed, quickly and before a decision? → A

Is a BI target state — semantic layer, consolidation or hand-over — and a sequenced roadmap needed? → B

A · BI Health Check

Assess current state · tool-agnostic.

KOMTAS

02 · TWO SERVICES · A

A

BI Health Check

Six headings on the current BI estate

WEEKS S · M · L	KOMTAŞ EFFORT person-days	ACCESS
1 · 1.5 · 2	6 · 9 · 12	None — guided

WHAT IS ASSESSED · 6 HEADINGS

1 Metrics & Semantic Layer

Central metric definitions, single calculation logic, definition owners, change control

B1

2 Report Estate & Lifecycle

Report and dashboard inventory, owners, unused reports; approval, certification, retirement

B2 · B8

3 Consumption Model & Performance

Semantic model design, aggregation, report load times, refresh windows, freshness

B3 · B4

4 Self-Service & Adoption

Who can build reports, request queue, training; actual use and export to Excel

B5 · B9

5 Security & Trust

Row- and column-level security, sharing and export control; reconciliation, data-error loop

B6 · B7

6 Tooling, Licence & Distribution

Tools in use and overlap, licence mix and unused licences, scheduled and embedded delivery

B10 · B11 · B12

HOW IT IS ASSESSED

Red / amber / green per heading

Red | Amber | Green

From documents, interviews and walkthroughs. No score, no ladder; a heading without evidence is “not assessed”.

WHAT YOU GET

- Red / amber / green view of six headings
- Findings and key risks, each with its evidence
- Improvement recommendations, prioritised
- Advice on whether B is worth taking

Not a product audit. No system access is given; the BI platform team shows the evidence in walkthroughs.

B · BI Modernization Assessment

Define future state · current state included.

KOMTAS

02 · TWO SERVICES · B

B — BI Modernization Assessment

Current state, target state and roadmap

WEEKS S · M · L	KOMTAŞ EFFORT person-days	ACCESS
3 · 3.5 · 4	22 · 28 · 34	Guided or read-only

WHAT IS ASSESSED · 12 DIMENSIONS

B1 Metric definition & semantic layer
Central definitions, single logic, owners

B2 Report & dashboard inventory
Inventory, owners, unused and overlapping reports

B3 Consumption data model
Model design, aggregation, granularity

B4 Performance & freshness
Load times, refresh, freshness commitment

B5 Self-service & skills
Report builders, training, request queue

B6 Security & access
Row / column security, sharing, export

B7 Data quality & trust
Trust in numbers, reconciliation, error loop

B8 Governance & lifecycle
Approval, certification, retirement rule

B9 Adoption & usage
Active users, sessions, use in decisions

B10 Cost & licence
Licence mix, unused licences, capacity

B11 Distribution & embedded
Scheduled delivery, mobile, portal, embedded

B12 Tool sprawl & standardisation
Tools in use, overlap, standard

HOW IT IS ASSESSED

Current and target level per dimension

1	2	3	4	5
	current		target	

Five-level ladder, placed on evidence. No weighted score; gap and dependencies set the roadmap.

WHAT YOU GET

- Current and target level on twelve dimensions
- Target state: tidy up, semantic layer, consolidate or hand over
- Report and metric inventory, retirement and hand-over list
- Roadmap with sequence, dependencies and effort

Mode A: the customer runs agreed usage-log and admin-console exports. Mode B: read-only access. Log retention under 30 days narrows measurement.

Health Check Headings Mapped to the Twelve Dimensions

KOMTAS

Customers see six headings in A and twelve dimensions in B. Each heading groups one to three dimensions, so a Health Check finding carries into B without re-mapping.

DIMENSION	A · HEALTH CHECK HEADING	EVIDENCE IN A · GUIDED	EVIDENCE IN B · MEASURED WHERE POSSIBLE
B1 **Metric definition & semantic layer**	1 Metrics & Semantic Layer	Metric dictionary, model files shown, interviews	Definitions per metric from model metadata; report-to-definition trace
B2 **Report & dashboard inventory**	2 Report Estate & Lifecycle	Inventory list shared by the customer, owner list	Usage log: reports not opened in 90 days, owner coverage
B3 **Consumption data model**	3 Consumption Model & Performance	Model walkthrough, design documents	Model metadata: count, scope, aggregation, reports per model
B4 **Performance & freshness**	3 Consumption Model & Performance	Refresh schedule and incidents as reported	Refresh history; load time p50 / p95
B5 **Self-service & skills**	4 Self-Service & Adoption	Interviews with central team and users, request queue view	Request queue records, creator licences, training records
B6 **Security & access**	5 Security & Trust	Access policy documents, sharing settings walkthrough	Admin console: row / column policies, sharing and export settings
B7 **Data quality & trust**	5 Security & Trust	User interviews, reconciliation practice	Data-error tickets and time to close, reconciled reports
B8 **Governance & lifecycle**	2 Report Estate & Lifecycle	Approval and certification rules, if written	Certified share, retired reports, change trail
B9 **Adoption & usage**	4 Self-Service & Adoption	User statements, usage screens shown	Usage log: active users, sessions, export actions
B10 **Cost & licence**	6 Tooling, Licence & Distribution	Licence summary shared by the customer	Licence records: type mix, unused for 90 days, capacity
B11 **Distribution & embedded**	6 Tooling, Licence & Distribution	Distribution lists, portal walkthrough	Subscription and delivery logs, embedded integrations
B12 **Tool sprawl & standardisation**	6 Tooling, Licence & Distribution	Tool list and owners	Active users per tool, report overlap across tools
EVIDENCE DEPTH		Documents, interviews, walkthroughs — no system access	Plus usage-log and admin-console evidence: customer exports (Mode A) or read-only access (Mode B)
RESULT FORMAT		Red / amber / green per heading	Current and target level per dimension; gap and dependencies set the roadmap

A heading or dimension left out of scope is named in the proposal: «OUT-OF-SCOPE HEADING» in 4a, «OUT-OF-SCOPE DIMENSION» in 4b.

SECTION 3

Method

The twelve dimensions, the evidence rules, the phases and how each service expresses its result.

Twelve dimensions — p. 13

Maturity ladder · evidence model — p. 14 – 15

How it is run · phase rules — p. 16 – 17

Result format · measures per dimension · target state decision — p. 18 – 20

Twelve Dimensions

KOMTAS

The checklist behind both services. B places each dimension on the ladder; A groups them into six headings. There are no weights and no score.

	DIMENSION	TOPICS COVERED
B1	**Metric definition & semantic layer**	Central definition, single calculation logic, definition ownership, change management
B2	**Report & dashboard inventory**	Total inventory, ownership, usage measurement, unused report ratio, overlap
B3	**Consumption data model**	Model design, aggregation strategy, granularity, scope per model
B4	**Performance & freshness**	Report load time, refresh window, freshness commitment and compliance
B5	**Self-service & skills**	Users able to build reports, training, request queue, central team load
B6	**Security & access**	Row- and column-level policy, sharing behaviour, export control
B7	**Data quality & trust**	Trust in the numbers, reconciliation practice, error reporting and correction loop
B8	**Governance & lifecycle**	Report approval, certification, retirement rule, change trail
B9	**Adoption & usage**	Active users, session frequency, actual use in decision processes
B10	**Cost & licence**	Licence distribution, unused licence ratio, capacity and cost attribution
B11	**Distribution & embedded**	Scheduled distribution, mobile access, embedding in portals and applications
B12	**Tool sprawl & standardisation**	Number of tools in use, overlapping scope, standard and switching cost

WHY METRIC DEFINITION COMES FIRST

If a metric is not defined once, the output is disputed even when the other eleven dimensions are sound: a fast, well-designed and secured report produces no decision if its number contradicts another report. Scattered definitions also pass up to the semantic and agent layers.

Five-Level Maturity Ladder

KOMTAS

Used in Modernization (B): each dimension is placed on this ladder. A level is not claimed — it is shown with evidence; without evidence, one level lower is recorded.

LEVEL 1
Ad hoc

No rules; results depend on people

- No written standard; practices vary by team
- Problems are solved by improvisation
- No measurement; status unknown

Exit: practice is written down

LEVEL 2
Repeatable

Work is done the same way, but not written

- Experienced staff follow the same method
- A newcomer can't repeat the result
- Measurement, if any, is irregular

Exit: rule is documented and owned

LEVEL 3
Defined

Rule is written and applied

- The standard is documented and known
- Deviations are noticed
- Regular measurement, no thresholds

Exit: thresholds set, deviation measured

LEVEL 4
Managed

Measured, thresholds set, deviation visible

- Thresholds defined and monitored
- Deviation detected automatically
- Root cause analysis is done

Exit: correction is automated

LEVEL 5
Optimised

Deviation auto-corrected; continuous improvement

- Correction is largely automated
- Thresholds are updated based on data
- Improvement shown by measurement

TARGET LEVEL IS THE ORG'S DECISION

Moving every dimension to level five is not the goal. The target level is set per dimension by the organisation; the assessment measures the gap between current and target. A level the organisation cannot show a need for is a cost, even if reached.

NO LEVEL SKIPPING

Level four cannot be reached without level three: setting a threshold first requires a written rule.
The roadmap is therefore sequential; a plan that skips two levels at once is not feasible.

Evidence Model

KOMTAS

Each finding is tied to an evidence type, shown in the report. If the evidence type is hidden, the report is unreadable.

MEASUREMENT
Measurement

A number the BI tools produce

· Usage logs, refresh history, load times, licence and capacity reports

Highest confidence · not open to dispute

ARTEFACT
Document

An existing document or configuration

· Metric dictionary, model file, access policy, report standard, approval record

High confidence · currency is verified

OBSERVATION
Observation

A flow traced end to end

· Following a report to source, tracking a request through the queue, a user session

Medium confidence · one-off observation

STATEMENT
Statement

What people report

· Interviews, user surveys, business unit statements

Low confidence · cannot confirm a level alone

THREE-STATE EVIDENCE SCALE

Evidence provided
Level shown by measurement or document

Partial evidence
Evidence exists, but its scope is narrow or its currency unclear

Evidence could not be produced
Not measurable due to access, log retention or missing records

THE MOST VALUABLE EVIDENCE HERE IS THE USAGE LOG

"This dashboard is used heavily" is a common statement, and the usage log often does not confirm it. Inventory, adoption and unused reports are measured from the log in B; A does not read it. A retention under 30 days narrows the measurement.

DIMENSION WITHOUT EVIDENCE NOT HIDDEN

A dimension that cannot be measured because the usage log is off is not guessed as "good" or "bad"; it is reported as "evidence could not be produced". This is often an improvement item in itself: an organisation that does not measure usage cannot manage its report estate.

How It Is Run — One Method, Two Depths

KOMTAS

The same evidence types and phases are used in both services. The service sets how deep the evidence goes and how long each phase takes.

03 · HOW IT IS RUN

FOUR KINDS OF EVIDENCE

Measurement — B

A number from usage logs, refresh history or licence records

Document — A · B

A metric dictionary, model file or policy that exists on its own

Observation — A · B

Seen working, or failing, in a walkthrough

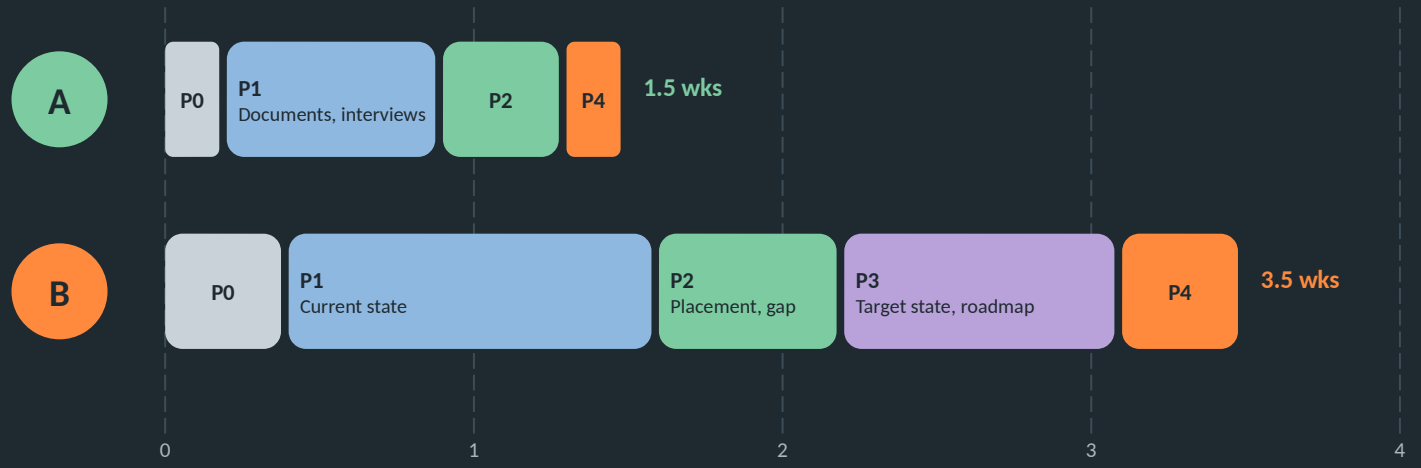

Statement — A · B

What a person says — recorded as a claim

A level or colour is given only where a document, an observation or a measurement supports it. Statements alone are reported as claims, with low confidence.

The usage log sets the depth. Retention and access are checked in P0; neither can be made up by adding people.

PHASES BY SERVICE · M BAND, IN WEEKS

P0 scope · P1 evidence · P2 assessment or placement · P3 target state and roadmap (B only) · P4 read-out

WHO DOES THE WORK

A — Assessment lead · BI / analytics consultant

B — Lead · BI consultant · semantic layer consultant · data architect · governance, security, licence on call

ACCESS BY SERVICE

A — No system access. Documents, interviews and screen walkthroughs by the BI platform team.

B — Mode A guided: the customer runs agreed usage-log and admin-console exports. Mode B: read-only admin console, usage logs, licence records.

Process — P0 to P4

KOMTAS

Five phases, each with a written rule. Durations vary by service and band; phase content does not. P3 is run in B only.

P0 · Scope
A 1 day · B 2 days

- Headings (A) or dimensions (B) in scope; in B, target level per dimension
- Critical reports and metrics named by the organisation
- B: access model agreed (Mode A or Mode B); exports or access requested
- Written definition of “active user” and the observation window

PHASE RULE
Inventory work does not start before the organisation names which reports are critical

P1 · Evidence
A 3–4 days · B 1–1.5 wks

- B: report inventory, usage-log and refresh-history exports
- Model files, metric definitions, access and licence records
- End-to-end tracing: one report to source, one request through the queue
- Interviews with business users and the central BI team

PHASE RULE
Each item is typed as measurement · artefact · observation · statement and the type is recorded

P2 · Assessment and placement
A 2 days · B 3 days

- B: metrics calculated over the agreed window
- Each heading or dimension placed on evidence: colour (A), level (B)
- B: gap between current and target level written per dimension
- No weighted score; findings ordered by impact

PHASE RULE
No colour or level without evidence: A records “not assessed”, B one level lower, with the missing evidence stated

P3 · Target state and roadmap
B only · 1 week

- Target state decided against the decision criteria
- Findings turned into improvement themes and a sequence
- Items handed over to the feeding layer written down
- Retirement list of reports, with reasons

PHASE RULE
Each recommendation links to a finding; one with no finding behind it is removed

P4 · Validation and release
A 1 day · B 2 days

- Factual review with the BI team and business representatives
- Objections recorded next to the finding
- Report released with scope, window and evidence gaps
- Baseline retained for the next assessment

PHASE RULE
An objection is not resolved away; it stays next to the finding. A single assessment is a snapshot

USER INTERVIEWS DRIVE THE SCHEDULE

Most technical evidence comes from exports and is collected quickly. The schedule is set by access to business users.
If the usage log is off or kept for less than 30 days, this is found in P0; it cannot be offset by adding people.

A SINGLE ASSESSMENT IS A SNAPSHOT

The finding set is retained as a dated baseline. Most of the value appears in the second assessment, when improvement can be shown.
For this reason, the date and scope of the reassessment are agreed jointly in P4.

Result Format by Service

KOMTAS

How a finding is expressed differs by service. The evidence rules are the same; what is claimed from them is not.

03 · METHOD · RESULT FORMAT

A Red / amber / green per heading

Red — A risk that already affects trust, security or cost. Action is needed before further investment.

Amber — Works today but depends on people or manual steps; likely to break with growth.

Green — A written rule, an owner and evidence are in place.

No score and no ladder. A colour is given only with the finding behind it; a heading with no evidence is marked “not assessed”, never green.

B Current and target level per dimension

Level — Placed on the five-level ladder from documents, observation and usage-log measurement.

Target — Set per dimension by the customer in P0; level five is not the goal everywhere.

Gap — The gap per dimension, with dependencies, sets the order of the roadmap.

No weighted score. Statement-only levels are claims with low confidence; a dimension that cannot be measured is reported as “evidence could not be produced”.

Measures per Dimension · B

KOMTAS

Used in Modernization (B), from usage logs, admin console and licence records — exported by the customer (Mode A) or read directly (Mode B). Not estimated where not measurable.

	DIMENSION	MEASURED
B1	**Metric definition & semantic layer**	Share of reports fed from central definitions · number of different definitions of a same-named metric · share of metrics with an owner · traceability of definition changes
B2	**Report & dashboard inventory**	Total report count · share of reports not opened in the last 90 days · share of reports with a defined owner · number of reports with overlapping scope
B3	**Consumption data model**	Number and scope of models · presence of an aggregation layer · consistency of granularity · reports per model
B4	**Performance & freshness**	Report load time distribution p50 and p95 · refresh duration and failure rate · compliance with the committed freshness
B5	**Self-service & skills**	Number of users able to build reports · request queue length · average turnaround time · share of trained users
B6	**Security & access**	Number of row- and column-level policies · access review frequency · export restrictions · sharing scope
B7	**Data quality & trust**	Data errors raised by users and time to close · share of reconciled reports · feedback loop to source
B8	**Governance & lifecycle**	Share of certified reports · share of reports through approval · number of retired reports · completeness of the change trail
B9	**Adoption & usage**	Active user ratio · session frequency · reports opened per user · export action ratio
B10	**Cost & licence**	Distribution by licence type · share of licences unused for 90 days · capacity utilisation · cost attributability to business units
B11	**Distribution & embedded**	Number and success rate of scheduled deliveries · mobile access ratio · number of embedded integrations
B12	**Tool sprawl & standardisation**	Number of tools in use · active users per tool · share of reports overlapping across tools · presence of a standard document

"ACTIVE USER" IS THE MOST DISPUTED MEASURE

The definition of an active user is written in P0: which action, within which period. Without it the same log gives two results, and when results come out the definition is argued instead of the finding. The same rule applies to report opens, sessions and exports.

Target State Decision

KOMTAS

Modernization (B) only. Four options. The decision is made on decision criteria and the findings behind them; there is no score.

OPTION A Keep and tidy up

Tool and model are right; the issue is inventory discipline

- Metric definitions largely central
- Model design meets the need
- Issues at inventory, ownership and retirement level

OPTION B Build a semantic layer

Definitions scattered; tool and model sufficient

- Same metric defined in more than one place
- Reports carry their own calculations
- No tool change needed; definitions must be centralised

OPTION C Consolidate tools

The multi-tool load cannot be carried

- Overlapping scope across several tools
- Duplicate licence and training load
- No standard; each unit goes its own way

OPTION D Hand over to the feeding layer

The problem is not in BI but in the layer below

- Performance and freshness rooted in model or engine
- Data quality complaints come from the source
- Limited fix possible on the BI side

CRITERION — STATEMENT TRUE IN THE ORGANISATION	A KEEP	B SEMANTIC	C CONSOLIDATE	D HAND OVER
Metric definition is central and single	STRONG	WEAK	FITS	FITS
Number of tools in use is manageable	STRONG	STRONG	WEAK	FITS
Consumption model meets the need	STRONG	FITS	FITS	WEAK
Root of performance issues is on the BI side	FITS	FITS	FITS	WEAK
Report inventory and ownership are managed	WEAK	FITS	FITS	FITS
Licence and training load is duplicated	FITS	FITS	STRONG	FITS

READING THE TABLE

If the statement in a row is true in the organisation, the row shows each option's validity; “WEAK” means the option falls short in that case.
Options are not exclusive: B and C can sit in one roadmap in sequence — definitions centralised first, then tools consolidated.

SECTION 4

Komtaş Side

Roles, duration, effort and sizing, deliverables and the proposal set, limits, package files and open items.

Competencies and roles p. 22

Duration, effort and sizing p. 23

Deliverables and proposal set p. 24

Limits of the assessment p. 25

Package files and open items p. 26

Competencies and Roles

KOMTAS

Which role is active in which phase, including customer participation. In A, Komtaş works with the assessment lead and the BI / analytics consultant only.

ROLE	DUTIES	PARTY	ACTIVE PHASES
Assessment Lead	Applying the method, scope, decision gates, report	**Komtaş**	P0 – P4
BI / Analytics Consultant	Inventory, model, performance and adoption dimensions	**Komtaş**	P0 – P4
Semantic Layer Consultant	Metric definition, calculation logic and definition ownership	**Komtaş**	P1 – P3
Data Architect	Consumption model and interface to the feeding layer	**Komtaş**	P1 – P3
Governance Consultant	Report lifecycle, certification, ownership	**Komtaş**	P1 – P3
Security and Privacy Specialist	Access policies, sharing and export	**Komtaş**	P1 – P2
Licence and Cost Analyst	Licence distribution, capacity and attributability	**Komtaş**	P1 – P2
Change Management Consultant	Adoption, training and user skills	**Komtaş**	P1 – P2
Project sponsor	Decision-making, prioritisation, raising access approvals	**Customer**	P0, phase transitions
BI platform owner	Admin console, usage log, licence records; validates findings	**Customer**	P0 – P4
Report Development Team	Model and report knowledge, end-to-end tracing support	**Customer**	P1 – P2
Business Unit Users	Actual use, trust, missing and overlapping reports	**Customer**	P1
Data Platform Team	Feeding-layer interface, refresh and freshness	**Customer**	P1
Security and Compliance	Access policies and sharing rules	**Customer**	P1

NO ASSESSMENT WITHOUT BUSINESS USERS

Adoption, trust and self-service cannot be measured by talking only to the central BI team: the team sees the request queue, users see whether they export to Excel after opening a report. A BI platform owner who can show the admin console is also a precondition to start.

Duration, Effort and Sizing

KOMTAŞ

Indicative band values. The band is set from the short form; dates are fixed at kick-off, once access lead times are known.

SERVICE	SMALL	MEDIUM	LARGE
A · BI Health Check 6 headings · RAG · guided	1 week · 6 pd · 2 days	1.5 weeks · 9 pd · 3 days	2 weeks · 12 pd · 4 days
B · BI Modernization Assessment 12 dimensions · ladder · Mode A or B	3 weeks · 22 pd · 5 days	3.5 weeks · 28 pd · 6 days	4 weeks · 34 pd · 8 days

Cell format: duration · Komtaş person-days · customer days. If B follows A, the evidence inventory from A is reused and B's P1 is reduced; it is not billed twice.

SIZING DRIVERS

DRIVER	SMALL	MEDIUM	LARGE	USED IN
Report and dashboard count	≤ 300	300 – 1,500	> 1,500	A · B
Active users	≤ 200	200 – 2,000	> 2,000	A · B
BI tools in use	1	2	> 2	A · B
Semantic models	≤ 10	10 – 50	> 50	A · B
Business units in scope	1 – 3	4 – 8	> 8	A · B
Feeding data platforms	1	2 – 3	> 3	A · B
Environments	≤ 2	3	> 3	A · B
Embedded / portal integrations	None	1 – 2	> 2	B
User representatives to interview	≤ 10	10 – 25	> 25	B
Usage-log retention	≥ 90 days	30 – 90 days	< 30 days	B
Access approval time	≤ 2 weeks	2 – 6 weeks	> 6 weeks	B

BAND RULE · the highest band that at least three drivers fall into — A uses its 7 drivers, B all 11. One large driver alone does not set the band.

Deliverables and Proposal Set per Service

KOMTAS

Which documents each service produces, which package files are used to price it, who writes which proposal section, and where it usually leads.

SERVICE	DELIVERABLES	INPUT FORM · PROPOSAL TEMPLATE	USUAL NEXT STEP
A · BI Health Check 1 · 1.5 · 2 weeks	· Red / amber / green view of six headings · Findings and key risks with their evidence · Prioritised improvement recommendations · Advice on whether B is worth taking	3a-health-check-girdi-formu 4a-health-check-teklif-sablonu Question set 5: questions marked A Set 6, Proposal Set: S1 – S7	→ B · BI Modernization → Report rationalisation
B · BI Modernization Assessment 3 · 3.5 · 4 weeks	· Current and target level on twelve dimensions, with evidence · Report and metric inventory, in an importable format · Target state decision with rejected options · Roadmap: themes, sequence, dependencies, effort · Retirement list and hand-over items to the feeding layer	3b-modernization-girdi-formu 4b-modernization-teklif-sablonu Question set 5: questions marked B Set 6, Proposal Set: S1 – S5, S8 – S14	→ Semantic layer build → BI migration / consolidation → Data Modernization → Managed Services

PROPOSAL STRUCTURE · WHO WRITES WHICH SECTION

Executive summary	Scope	Method	Deliverables	Assumptions	Schedule, person-days	Team	Price	Terms
SAT	SAT	SAT · blueprint	SAT	SAT	Delivery	Delivery	Sales	Fixed

EVIDENCE IS REUSED, NOT BILLED TWICE
If B follows A, the evidence inventory from A is reused. The proposal states this in writing and reduces P1 accordingly. One question set (5) and one internal set (6) serve both services.

SAT BOUNDARY
SAT produces the scope, the heading or dimension set, the band and the first effort estimate. Delivery sets the duration, sales enters the price. SAT estimates independently first and challenges delivery's figure at the end; the challenge is recorded with its rationale either way.

Limits of the Assessment

KOMTAS

What this work does not show is stated explicitly within the report

No reports built, no models written

The assessment measures inventory and design. Rewriting reports or fixing models is separate work, proposed separately.

No BI product selection

Tool sprawl is measured as it stands; which product to move to is not assessed. Migration is BI Migration (KARE URT-2026-001).

Feeding layer not measured on its own

DWH and lakehouse are covered only through their interface to BI; their own capability is a DWH or Lakehouse Assessment.

Report content accuracy not audited

Whether numbers follow business rules is a reconciliation exercise. The assessment measures whether reconciliation is done.

No licence negotiation

The licence dimension measures distribution and unused licences. Contracts and discount structures are out of scope.

No “pass” result is produced

The assessment is not a certification. It shows where BI stands, on what evidence, and what to do next.

THE MOST MISUNDERSTOOD LIMIT

Organisations often expect a “which reports to delete” list. The assessment shows candidates with evidence; the deletion decision is the organisation's and needs each owner's approval. That reports without an owner cannot be deleted is itself one of the findings.

A DIMENSION WITHOUT EVIDENCE IS ALSO A FINDING

A dimension that cannot be measured because the usage log is off or kept too briefly is often an improvement item in itself.
An organisation that does not measure usage cannot manage its report estate; the report says so.

OBJECTIONS ARE RECORDED, NOT RESOLVED

“That report is actually used” is a common objection; it is recorded next to the finding with the usage-log value (B) or the evidence shown (A).

Package Files and Open Items

KOMTAS

The files of the BI Assessment package, each in Turkish (-tr) and English (-en), and the points to settle before the first proposal.

FILE	PURPOSE	AUDIENCE
bi-assessment-0-surec-akisi	Process flow from first contact to proposal	internal
bi-assessment-1-blueprint	This document: services, method, sizing	internal
bi-assessment-2-musteri-sunumu	Customer deck: two services, about 20 minutes plus appendix	customer
bi-assessment-3a / 3b-...-girdi-formu	Proposal input forms for A and B, filled by SAT	internal
bi-assessment-4a / 4b-...-teklif-sablonu	Proposal templates; numbers ...-BIA-... and ...-BIB-...	customer
bi-assessment-5-musteri-soru-seti	Customer question set, questions marked A · B, A or B	customer
bi-assessment-6-ic-soru-seti	Internal question set; Proposal Set S1 – S14	internal

WHAT CUSTOMER FILES DO NOT CONTAIN

No internal effort figures, no KARE codes and no internal asset names. Tool migration appears only as “BI migration (separate proposal)”. Komtaş-internal references — BI Migration (KARE URT-2026-001) and the QlikView → Power BI accelerator (GEN-2026-001) — are used in files 1, 3a, 3b and 6 only.

OPEN ITEMS

1 Durations and efforts not calibrated

Values mirror the Lakehouse package and have not been checked against BI projects. Delivery confirmation is needed before the first proposal.

2 Align with the KARE BI Assessment method

Compare with KARE IT-2026-012 (Gamze Akbulut) and align dimensions, deliverables and terminology.

3 BI Migration boundary

Agree where B's target state ends and BI Migration (KARE URT-2026-001) starts, including the QlikView → Power BI accelerator (GEN-2026-001).
