BI ASSESSMENT · SERVICE A

BI Health Check — Proposal Input Form

Information to be collected for a high-level assessment of the current BI estate, and the proposal field each item fills. Once the form is completed and returned, the proposal text is produced.

Rows marked ● are BLOCKERS — the proposal cannot be written without them and they cannot be filled with assumptions.
If rows marked ○ remain missing, they are written into the proposal as assumptions and go to section 5.

LIMIT OF SERVICE A: it is based on documents, statements and walkthroughs shown on screen by the BI platform team; Komtaş is not given system access and no measurement is committed. For this reason usage log retention, access approval time and access to the admin console and licence records are not asked in this form — these are inputs to service B.

A does not produce a maturity level or score; the result is a red / amber / green status for each of the six headings, with findings, risks and recommendations. If the customer expects a maturity level per dimension, a target state or a roadmap, the right service is B, not A; this is clarified in the first meeting.

A. Organisation and Proposal Details

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Organisation and legal entities in scope — single company or group**	Cover, 1. Executive Summary — «CUSTOMER», «legal entities in scope»	
○	Proposal addressee — name, title, unit	Cover, 9. Proposal Terms — «full name», «title»	
○	Proposal date and expected decision date	Cover «dd Month yyyy», 9. validity «proposal date + 1 month»	
○	Is there an RFP or specification	Structure of the proposal, 2.4 source column «RFP / statement»	
○	Are there competitors, and who	Emphasis and section weights	

B. Decision — What the Assessment Will Support

A is a short, high-level engagement; on its own it does not support an investment decision such as a semantic layer investment, tool consolidation or licence renewal.

If the decision the customer expects is an investment, tool consolidation or a target state, the right service is B.

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Which decision will this assessment support**	1. Executive Summary «DECISION», 2.1 Purpose of the Programme	
●	**Is the expected output a red / amber / green status and findings per heading, or a maturity level, target state and roadmap per dimension**	Service choice — A or B	
○	Who will make the decision, and by what date	6. Project Plan, 9. validity	
○	What is the most frequent complaint today — slowness, distrust of the numbers, reports hard to find, request backlog	1. Executive Summary, P1 focus headings	
○	Is a licence renewal date approaching	6. Project Plan — schedule constraint	
○	Has a BI assessment been done before	5.1 Assumptions — «assumption — from input form»	

C. Scope

A works on six headings: Metrics & Semantic Layer · Report Estate & Lifecycle · Consumption Model & Performance · Self-Service & Adoption · Security & Trust · Tooling, Licence & Distribution.

The feeding data layer (DWH / Lakehouse) is covered only through the interface it offers to BI; the layer itself is the subject of the DWH Assessment or the Lakehouse Assessment.

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Which BI tools are in scope; all of them or some**	2.1 Purpose of the Programme, 2.5 Out of Scope	
●	**Are all six headings in scope; is any heading to be excluded**	2.3 Assessment Headings, «OUT-OF-SCOPE HEADING»	
○	Number of business units in scope	Driver 5, 2.4 Scope Size	
○	Are any tools, business units or environments to be excluded from scope	2.5 Out of Scope	
○	Is operational reporting — ERP or in-application reports — in scope	2.5 Out of Scope	

D. Tools and Environment

A is run independently of the tool; these questions are for understanding and sizing the BI estate, not for tool-specific measurement.

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**BI tools in use and their versions — Qlik, Power BI, Tableau, MicroStrategy or other**	Driver 3, 2.4 «TECHNOLOGY»	
○	Deployment model — SaaS, on-prem or hybrid	2.4 Scope Size, 5.1 Assumptions	
○	Feeding data platform(s) — DWH, Lakehouse, direct source	Driver 6, 2.4, 2.5 Out of Scope	
○	Is there a semantic or metrics layer product	2.3 — Metrics & Semantic Layer heading	
○	Number of environments — dev, test, prod	Driver 7, 2.4	
○	Is there embedded use — portal, in-application, customer-facing	2.3 — Tooling, Licence & Distribution heading	

E. Scale

In A, scale values are taken as statements and are not verified; verification through the usage log is the subject of service B.

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Approximate number of reports and dashboards**	Driver 1, 2.4 «N»	
●	**Approximate number of active users**	Driver 2, 2.4 «N»	
○	Number of semantic models or datasets	Driver 4, 2.4 «N»	
○	Can the most critical reports and metrics be named	P0 scope, P1 focus	

F. Access to Documents and Interviews

> The evidence sources of A are documents, interviews and walkthroughs shown on screen by the BI platform team; Komtaş is not given system access. This section directly determines the schedule.

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Estimated number of people to be interviewed — central BI team and business unit users**	6. Project Plan, 7.2 Expected participation	
●	**Can a metric dictionary, report standard, access policy or similar document be shared**	P1 evidence collection, 5.2 Evidence and Access	
○	Can interviews with the BI platform owner and the report development team be arranged	7.2 Expected participation	
○	Can the BI platform team show the admin console, the report inventory and the refresh history on screen — no system access is requested	P1, 5.2, 7.2 Expected participation	
○	Can business unit users be interviewed	2.3 — Self-Service & Adoption heading, 7.2	
○	Will the interviews be held remotely, on site or hybrid	5.4 «remotely / on site / hybrid»	

G. Organisation and Commercial Framework

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Can a BI platform owner be assigned**	7.2 Expected participation, 5.3 Assumptions	
○	Who is the project sponsor	7.3 Governance and Reporting	
○	Is there an approved budget	8. Project Fees — «fee»	
○	Is there a schedule constraint — licence renewal, budget period, management presentation	6. Project Plan	
○	Procurement process and approval steps	9. Proposal Terms	

Band Estimate — Service A

A uses seven of the eleven drivers; the drivers specific to B (embedded / portal integrations, user representatives to interview, usage log retention, access approval time) are not asked in A. The band is the highest band that at least three drivers fall into.

#	DRIVER	SMALL	MEDIUM	LARGE	RESULTING BAND
1	Number of reports and dashboards	≤ 300	300 – 1500	> 1500	
2	Number of active users	≤ 200	200 – 2000	> 2000	
3	Number of BI tools in use	1	2	> 2	
4	Number of semantic models	≤ 10	10 – 50	> 50	
5	Number of business units in scope	1 – 3	4 – 8	> 8	
6	Number of feeding data platforms	1	2 – 3	> 3	
7	Number of environments	≤ 2	3	> 3	
	RESULT — selected band	1 week · 6 pd	1.5 weeks · 9 pd	2 weeks · 12 pd	

CUSTOMER EFFORT — small 2 days · medium 3 days · large 4 days. The load of A on the customer side is low; this expectation is stated in section 7.2 of the proposal.

PHASE BREAKDOWN — P0 Scope 1 day · P1 Documents, interviews and walkthroughs 3–4 days · P2 Assessment and report 2 days · P4 Read-out and validation 1 day. A has no P3.

If the customer moves to B after A, the evidence inventory produced in A is reused and deducted from the effort of B; the same work is not invoiced twice.

Service Selection Check

Before filling in the form, make sure that A is the right service.

STATUS	RIGHT SERVICE
The aim is to understand the current BI estate and see risks and areas for improvement	A
A maturity level per dimension (current and target) and a comparable baseline are required	B
A target state decision — semantic layer, tool consolidation, hand-over to the feeding layer — and a roadmap are required	B
Usage, the share of unused reports or idle licences are to be measured from the usage log	B
First contact, budget unclear, a quick output is required	A
The tool migration itself is required — e.g. to Qlik Cloud or Power BI	BI Migration — separate service (URT-2026-001; GEN-2026-001 for QlikView→Power BI)
The root cause appears to sit in the warehouse or the lakehouse	DWH Assessment / Lakehouse Assessment

Blocker Checklist

SECTION	BLOCKER QUESTION	ANSWERED?
A	Organisation and legal entities in scope — single company or group	
B	Which decision will this assessment support	
B	Is the expected output a red / amber / green status and findings per heading, or a maturity level, target state and roadmap per dimension	
C	Which BI tools are in scope; all of them or some	
C	Are all six headings in scope; is any heading to be excluded	

SECTION	BLOCKER QUESTION	ANSWERED?
D	BI tools in use and their versions — Qlik, Power BI, Tableau, MicroStrategy or other	
E	Approximate number of reports and dashboards	
E	Approximate number of active users	
F	Estimated number of people to be interviewed — central BI team and business unit users	
F	Can a metric dictionary, report standard, access policy or similar document be shared	
G	Can a BI platform owner be assigned	

IF A BLOCKER IS MISSING — no proposal is written. If one must be written, each missing item is entered as an assumption in section 5 of the proposal in place of «assumption — from input form».

The second row of section B is a special case: if the customer expects a report with a maturity level, target state or usage measurement per dimension, A is the wrong service and this is stated at the outset.
