BI ASSESSMENT · SERVICE B

BI Modernization Assessment — Proposal Input Form

Information to be collected in the customer meeting and the proposal field each item fills. Once the form is completed and returned, the proposal text is produced.

Rows marked ● are BLOCKERS — the proposal cannot be written without them and they cannot be filled with assumptions.

If rows marked ○ remain missing, they are written into the proposal as assumptions and go to section 5.

If the answer to a question is “we don’t know”, that is also an answer — it is often the first finding and goes into the proposal as an assumption.

TWO QUESTIONS DIRECTLY DETERMINE THE SCHEDULE AND THE MEASUREMENT: access approval time (Mode B) or delivery time of the export outputs (Mode A), and usage log retention. Neither can be offset by adding people.

If the usage log is switched off or retained for less than thirty days, the measurement narrows; the dimensions measured from the log, B2, B9 and B10 in particular, are not estimated but reported as “evidence could not be produced”. This is written into the proposal as a constraint (5.2), not as an assumption.

THIS FORM IS FOR SERVICE B — current state plus target state and roadmap, across twelve dimensions (B1–B12); current and target level per dimension, no weighted score.

If the customer only wants a high-level picture of the current state, the right service is A and A’s own input form is used. The service choice is clarified in the first meeting.

If the tool migration itself is required, the subject is BI Migration (separate service — URT-2026-001; GEN-2026-001 for QlikView→Power BI). B supports that decision; it does not carry out the migration.

If an A engagement has previously been carried out for this customer, the evidence inventory produced is reused and deducted from B’s effort — this is stated in the proposal.

A. Organisation and Proposal Details

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Organisation and legal entities in scope — single company or group**	Cover, 1. Executive Summary — «CUSTOMER», «legal entities in scope»	
○	Proposal addressee — name, title, unit	Cover, 9. Proposal Terms — «full name», «title»	
○	Proposal date and expected decision date	Cover «dd Month yyyy», 9. validity «proposal date + 1 month»	
●	**Is there an RFP or specification; if so, its number and response format**	Structure of the whole proposal, 2.4 source column «RFP / statement»	
○	Are there competitors, and who	Emphasis and section weights	

B. Decision — What the Assessment Will Support

If this section cannot be answered, the engagement reads like a “report-counting job” and its price cannot be defended.

A BI assessment most often supports one of three decisions: a semantic layer investment, tool consolidation or licence renewal.

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Which decision will this assessment support — semantic layer investment, tool consolidation, licence renewal, budget defence, restructuring**	1. Executive Summary «DECISION», 2.1 Purpose of the Programme	
○	Who will make the decision, and by what date	6. Project Plan, 9. validity	

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
○	Is a licence renewal date approaching	6. Project Plan — schedule constraint	
○	Has an assessment been done before; what was the outcome	5.1 Assumptions, baseline comparison	
○	What is the most frequent complaint today — slowness, distrust of the numbers, reports hard to find, request backlog	P1 focus dimensions	
○	How will success be measured — which outcome counts as “done”	1. Executive Summary	

C. Scope

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Which BI tools are in scope; all of them or some**	2.1 Purpose of the Programme, 2.5 Out of Scope	
●	**Are all twelve dimensions in scope; is any dimension to be excluded**	2.3 Assessment Dimensions, «OUT-OF-SCOPE DIMENSION»	
●	**Number of business units in scope**	Driver 5, 2.4 Scope Size	
○	Are any tools, business units or regions to be excluded from scope	2.5 Out of Scope	
○	Are non-production environments in scope	Driver 7, 5.1 Assumptions	
○	Is operational reporting — ERP or in-application reports — in scope	2.5 Out of Scope	

D. Tools and Environment

> This section determines both the sizing and which evidence sources — usage log, admin console export, refresh history, licence records — will be sought in P1.

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**BI tools in use and their versions — Qlik, Power BI, Tableau, MicroStrategy or other**	Driver 3, 2.4 «TECHNOLOGY»	
○	Deployment model — SaaS, on-prem or hybrid	2.4 Scope Size, 5.1 Assumptions	
○	Feeding data platform(s) — DWH, Lakehouse, direct source	Driver 6, 2.4, 2.5 Out of Scope — interface only	
○	Is there a semantic or metrics layer product	Dimension B1	
○	Number of environments — dev, test, prod	Driver 7, 2.4	
○	Are there embedded or portal integrations — portal, in-application, customer-facing; how many	Driver 8, 2.4, dimension B11	

E. Scale and Inventory

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Total number of reports and dashboards**	Driver 1, 2.4 «N»	
●	**Number of active users and number of licences**	Driver 2, 2.4 «N», dimension B10	
○	Number of semantic models or datasets	Driver 4, 2.4 «N», dimension B3	

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
○	Daily or weekly report open volume	Dimension B9	
○	Number of scheduled distributions	Dimension B11	
○	Can the most critical reports and metrics be named	P0 deliverable, P1 focus, 5.3 Assumptions	

F. Access and Evidence Sources

> Without the answers in this section, no schedule can be given. A dimension whose evidence source cannot be accessed cannot be measured; in Mode A, a dimension for which the agreed export is not taken is reported as statement-based with low confidence.
>
> The usage log is the most decisive evidence source of this assessment; it cannot be replaced by statements.

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Which access model — Mode A (guided: Komtaş is not given system access; the customer team takes the agreed usage log and admin console exports and shares the output) or Mode B (read-only access to the admin console, usage log and licence records); the final decision is made in P0**	«MOD A» / «MOD B» paragraphs, 5.2, 5.3, 6. Project Plan	
●	**Mode B: how does the access approval process work, and how long is it expected to take · Mode A: who will take the exports, and how soon can outputs be shared**	Driver 11, 2.4, 5.2 «N» working days, 6. Project Plan	
●	**Is the usage log switched on; how many days is it retained**	Driver 10, 2.4 «N», 5.2 — CONSTRAINT	
○	Can an admin console and report inventory export be taken	Dimension B2, P1 evidence collection	
○	Can refresh history and error records be accessed (in Mode A: can they be shared as an export)	Dimension B4, 5.2	
○	Can licence and capacity reports be shared	Dimension B10, 5.2	
○	Can model files and metric definitions be reviewed	Dimensions B1 and B3	
○	Can one report be selected for end-to-end tracing	P1, observation evidence	
○	Is access to data content required, or is metadata sufficient	5.2 Evidence and Access	

G. Metric Definition and Semantic Layer

> This section feeds dimension B1. In most organisations B1 comes out as the weakest dimension, and it is the main input to the “Build a semantic layer” target state option.

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Is there a central metric dictionary or definition catalogue**	Dimension B1, 2.3 Assessment Dimensions	
○	Have owners been assigned to metric definitions — who can change them	Dimension B1	
○	Is there a known case of the same metric giving different results in different reports	P1 focus, recurring pattern check	
○	Does the calculation logic sit in the report or in a central layer	Dimensions B1 and B3	
○	Is there a process for reconciling the numbers	Dimension B7	

H. Users, Adoption and Interview Plan

> The adoption and self-service dimensions cannot be measured by talking only to the central BI team; interviews with business unit users are mandatory. These interviews are the main driver of the schedule.

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Number of user representatives to be interviewed and their distribution across units**	Driver 9, 2.4 «N», 6. Project Plan, 7.2	
○	How many users can build their own reports	Dimension B5	
○	How is a new report request raised; what is the average turnaround time	Dimension B5	
○	Is there a training programme; how many people have taken it	Dimension B5	
○	Is there information on users' habit of exporting to Excel	Dimension B9, recurring pattern check	
○	Have reports been deleted or retired; who decides	Dimension B8	

I. Target Levels and Expectations

> The target level is the organisation's decision. If not set, it is set jointly in P0; this is written into the proposal as an assumption. Moving every dimension to level five is not the goal.

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
○	Can a target level (1–5) be set for each of the twelve dimensions; who will set it — the answer per dimension is entered in the table below	2.3 Assessment Dimensions, P0 deliverable, 5.3	
○	Expected target state direction — is a semantic layer build, tool consolidation or BI migration under consideration	1. Executive Summary, 3. Methodology — target state decision	
○	Is there a mandatory standard, regulation or audit expectation	Dimension B6, 5.1 Assumptions	
○	Who will the report be presented to — BI team or management	1. Executive Summary, 4. Deliverables	

Target level per dimension. If unknown, leave blank; it is set jointly in P0 and written into the proposal as an assumption.

	DIMENSION	WHERE IT FILLS IN THE PROPOSAL	TARGET LEVEL (1–5) AND WHO SETS IT
○	B1 Metric definition & semantic layer	P0 deliverable, 5.3 Assumptions	
○	B2 Report & dashboard inventory	P0 deliverable, 5.3 Assumptions	
○	B3 Consumption data model	P0 deliverable, 5.3 Assumptions	
○	B4 Performance & freshness	P0 deliverable, 5.3 Assumptions	
○	B5 Self-service & skills	P0 deliverable, 5.3 Assumptions	
○	B6 Security & access	P0 deliverable, 5.3 Assumptions	
○	B7 Data quality & trust	P0 deliverable, 5.3 Assumptions	
○	B8 Governance & lifecycle	P0 deliverable, 5.3 Assumptions	
○	B9 Adoption & usage	P0 deliverable, 5.3 Assumptions	
○	B10 Cost & licence	P0 deliverable, 5.3 Assumptions	

	DIMENSION	WHERE IT FILLS IN THE PROPOSAL	TARGET LEVEL (1–5) AND WHO SETS IT
○	B11 Distribution & embedded	P0 deliverable, 5.3 Assumptions	
○	B12 Tool sprawl & standardisation	P0 deliverable, 5.3 Assumptions	

J. Organisation and Roles

> If no BI platform owner is assigned, P1 takes longer and most of the evidence falls back to statements; the report is no longer measured.

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Can a BI platform owner with access to the admin console and the usage log be assigned**	7.2 Expected participation, 5.3 Assumptions	
○	Who is the project sponsor	7.3 Governance and Reporting	
○	Will the report development team join the interviews; is it central or distributed	7.2, dimension B5	
○	Can the feeding data platform team be interviewed	7.2, dimension B4	
○	Will the security and compliance side be involved in the process	7.2, dimension B6, access approvals	

K. Commercial Framework

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
○	Is there an approved budget	8. Project Fees — «fee»	
○	Schedule constraint — licence renewal, budget period, management presentation	6. Project Plan	
○	Procurement process and approval steps	9. Proposal Terms	
○	Will the engagement be run remotely, on site or hybrid	5.4 «remotely / on site / hybrid»	

Band Estimate — Worksheet

Completed after the answers are collected. The band is the highest band that at least three drivers fall into; a single large driver does not carry the band.

The durations below apply to Service B. For A, 1 / 1.5 / 2 weeks (6 / 9 / 12 pd) apply; A uses only drivers 1–7 and has its own input form.

#	DRIVER	SMALL	MEDIUM	LARGE	RESULTING BAND
1	Number of reports and dashboards	≤ 300	300 – 1500	> 1500	
2	Number of active users	≤ 200	200 – 2000	> 2000	
3	Number of BI tools in use	1	2	> 2	
4	Number of semantic models	≤ 10	10 – 50	> 50	
5	Number of business units in scope	1 – 3	4 – 8	> 8	
6	Number of feeding data platforms	1	2 – 3	> 3	
7	Number of environments	≤ 2	3	> 3	
8	Embedded or portal integrations	None	1 – 2	> 2	
9	User representatives to interview	≤ 10	10 – 25	> 25	
10	Usage log retention	≥ 90 days	30 – 90 days	< 30 days	
11	Access approval time (Mode B) or export delivery time (Mode A)	≤ 2 weeks	2 – 6 weeks	> 6 weeks	
	RESULT — selected band and duration	3 weeks · 22 pd	3.5 weeks · 28 pd	4 weeks · 34 pd	

CUSTOMER EFFORT — small 5 days · medium 6 days · large 8 days. This expectation is stated explicitly in section 7.2 of the proposal.

PHASE BREAKDOWN (medium band indication) — P0 Scope 2 days · P1 Current state and evidence 1–1.5 weeks · P2 Placement and gap 3 days · P3 Target state and roadmap 1 week · P4 Validation and publication 2 days.

The duration is set by the interview schedule, not by technical measurement; inventory and log data are taken quickly through exports. If driver 9 falls into the large band, the schedule extends even if the other drivers fall into the small band.

Blocker Checklist

These rows must be answered before proposal writing starts.

SECTION	BLOCKER QUESTION	ANSWERED?
A	Organisation and legal entities in scope — single company or group	
A	Is there an RFP or specification; if so, its number and response format	
B	Which decision will this assessment support — semantic layer investment, tool consolidation, licence renewal, budget defence, restructuring	
C	Which BI tools are in scope; all of them or some	
C	Are all twelve dimensions in scope; is any dimension to be excluded	
C	Number of business units in scope	
D	BI tools in use and their versions — Qlik, Power BI, Tableau, MicroStrategy or other	
E	Total number of reports and dashboards	
E	Number of active users and number of licences	
F	Which access model — Mode A (guided) or Mode B (read-only)	

SECTION	BLOCKER QUESTION	ANSWERED?
F	Mode B: how does the access approval process work, and how long is it expected to take · Mode A: who will take the exports, and how soon can outputs be shared	
F	Is the usage log switched on; how many days is it retained	
G	Is there a central metric dictionary or definition catalogue	
H	Number of user representatives to be interviewed and their distribution across units	
J	Can a BI platform owner with access to the admin console and the usage log be assigned	

IF ANY BLOCKER IS MISSING — the proposal is not written. If it must be written, each missing item is written into section 5 of the proposal as an assumption, and it is stated that the scope will be reassessed if that assumption does not hold.

The third row of section F is a special case: if the usage log is switched off or retained only briefly, this is not an assumption but a constraint, and it narrows the measurement.
