## BI ASSESSMENT — INFORMATION GATHERING FORM

Information needed to determine the service to be proposed, its scope and duration. Numerical answers may be given as approximate values. The SERVICE column shows which service the question is required for (A · BI Health Check, B · BI Modernization Assessment).

| # | SECTION | SERVICE | QUESTION | ANSWER | ADDITIONAL NOTES |
|---|---|---|---|---|---|
| 1 | Scope and Expectations | A · B | What decision is this work expected to support (semantic layer investment, tool consolidation, licence renewal, budget planning, restructuring, etc.)? By when and by whom is the decision expected to be made? | | |
| 2 | Scope and Expectations | A · B | Which of the following is closest to the expected outcome: a status picture of the current BI environment by heading with findings and recommendations, or current and target level by dimension with a target-state decision and roadmap? | | |
| 3 | Scope and Expectations | A · B | What are the most frequently raised issues with the BI environment today (slow reports, the same metric showing different values in different reports, reports that cannot be found, report request backlog, licence cost, etc.)? | | |
| 4 | Scope and Expectations | A · B | Which legal entities and business units are expected to be included in the assessment scope; approximately how many business units are in scope? | | |
| 5 | Scope and Expectations | A · B | Has an assessment of the BI environment been carried out before; if so, can its results be shared? | | |
| 6 | Scope and Expectations | B | Is there a leading direction for the target state (keeping and tidying up the current set-up, building a common semantic layer, reducing the number of tools in use, moving to another BI tool)? | | |
| 7 | Current Environment | A · B | Which BI tools are in use (Power BI, Qlik, Tableau, MicroStrategy, etc.); what are their versions and deployment model (SaaS, on-premises, hybrid)? Are all tools in scope? | | |
| 8 | Current Environment | A · B | What are the approximate number of reports and dashboards, and the number of active users and licences? | | |
| 9 | Current Environment | A · B | What is the approximate number of semantic models or datasets; is there a central metric dictionary or definition catalogue? | | |
| 10 | Current Environment | A · B | Which data platforms feed the BI tools (data warehouse, lakehouse, direct source systems) and approximately how many are there? How many environments (dev, test, prod) are there? | | |
| 11 | Current Environment | B | Are reports used embedded in a portal, an application or a customer-facing channel; approximately how many integrations are there? | | |
| 12 | Current Environment | B | Can the reports and metrics considered most critical for the organisation be listed? | | |
| 13 | Ways of Working | B | Is the usage log of the BI tools enabled; how long is it retained? | | |
| 14 | Ways of Working | B | Can Komtaş be given read-only access to the admin console, usage log and licence records; if so, how does the approval process work and how long does it take? If access cannot be given, can the customer team take the agreed exports and share them? | | |
| 15 | Ways of Working | B | Is separate approval from information security or compliance required to share usage log or export outputs? | | |
| 16 | Ways of Working | A · B | Can a metric dictionary, report standard, access policy or similar documents be shared; can the BI platform team give an on-screen walkthrough of the admin console and report inventory? | | |
| 17 | Ways of Working | A · B | Can the BI platform owner and the report development team allocate time to the work; approximately how many people are expected to be interviewed? | | |
| 18 | Ways of Working | B | How many user representatives from business units can be interviewed; how are they distributed across units? | | |

| # | SECTION | SERVICE | QUESTION | ANSWER | ADDITIONAL NOTES |
|---|---|---|---|---|---|
| 19 | Ways of Working | A · B | Is the work expected to be carried out remotely, at the customer's premises or in a hybrid way? | | |
| 20 | Ways of Working | A · B | Is there an RFP or specification; how does the procurement process work, and are there any timing constraints (licence renewal, budget period, management presentation, etc.)? | | |

## INFORMATION NOTE

| | |
|---|---|
| **Purpose of the form** | This form has been prepared to collect the information needed to select the service to be proposed under BI Assessment and to determine the scope, duration and team composition of the work. |
| **Two services** | A — BI Health Check: a high-level assessment of the current BI environment under six headings; the result is a red / amber / green status per heading with findings, risks and recommendations.<br>B — BI Modernization Assessment: current and target level in twelve dimensions, a target-state decision and roadmap; the result is the current and target level per dimension.<br>The services are not mandatory continuations of one another; either can be the starting point. |
| **Which question for which service** | The SERVICE column shows which service the question is required for. If the service has not yet been decided, answering all questions is recommended.<br>For A: 1–5, 7–10, 16–17, 19–20<br>For B: 1–20 |
| **Nature of the answers** | Numerical answers may be given as approximate values; exact figures are not required. Questions whose answers are not known may be left blank. |
| **System access** | A: Komtaş is not given system access. The work is carried out through documents, interviews and on-screen walkthroughs given by the BI platform team.<br>B: Carried out in one of two ways, decided at the start of the work. If carried out without system access, the customer team takes the agreed usage log and admin console exports and shares them; dimensions for which exports cannot be taken are reported as statement-based with low confidence. In the other way, Komtaş is given read-only access to the admin console, usage log and licence records. |
| **Usage log** | In B, the usage log is the decisive evidence source. If retention is below thirty days, the measurement window narrows; if the log is disabled or evidence cannot be produced for a dimension, that dimension is not estimated but reported as “evidence could not be produced”. |
| **Questions left blank** | Every topic left unanswered is stated as an assumption in the proposal. If the assumption does not hold, the scope and duration are re-evaluated. |
| **Not asked in this form** | Assessment headings and dimensions, target maturity levels and the methodology to be applied are not asked in this form. These are proposed by Komtaş based on the answers given, presented in the proposal and finalised jointly at the start of the work. |
| **Confidentiality** | The information shared is used only for preparing the proposal and is not shared with third parties. |
