DATA GOVERNANCE PROGRAM

Strategy and framework, technology enablement, managed service

A phased programme: the framework first, then the platform, then continuous operation

1 **Why now and where it sits**
Trusted data for AI, common pain points, and the programme's place in the 360 layers. p. 2 – 4

2 **The programme**
Three pillars, three tiers, and the maturity assessment in ten categories. p. 5 – 7

3 **Outcomes and timeline**
What each tier delivers, and a pilot-first plan in indicative weeks. p. 8 – 9

4 **Why Komtaş and next step**
How the programme is run and how it starts. Appendix from p. 11. p. 10

Why Data Governance, Why Now

KOMTAS

No autonomous decisions without trusted data. AI and agents act on the data they are given; whether that data can be trusted is a governance question.

01 · WHY NOW

TRUSTED DATA FOR AI · THREE FOUNDATIONS

Agentic AI · safe autonomy
agents and analytics act on governed data

Organisation
owners, stewards, decision rights

Process
how data is created, approved and used

Technology
glossary, catalogue, lineage, quality

Data governance

DATA GOVERNANCE IS NOT AN IT PROJECT

1. **Business value**
   How reliable and how fast are decisions, and what business value do they create?
2. **Ownership**
   Who is responsible for the data, and who is accountable for it?
3. **Processes**
   How is data produced, approved and used? Are the processes part of daily work?
4. **Cultural change**
   How does the change in culture happen, and how is the organisation kept aligned?

What AI needs from governance. AI and advanced analytics should run on data whose ownership, definition, quality and classification are known. That is what this programme puts in place.

Common Needs and Pain Points

KOMTAS

Six areas where the same questions come up across organisations. The maturity assessment measures each of them.

01 · COMMON NEEDS

Business glossary

- What does this data mean?
- Are glossaries organised by domain, and in a hierarchy?
- How does one data element relate to another?

Business terms used inconsistently across the organisation — categories 4 · 9

Ownership and collaboration

- Who knows what this data means?
- Who defines and approves glossary terms?
- Who is responsible for policies and processes?

No common platform that brings business and IT together — categories 1 · 10

Data catalogue

- What data does the organisation hold?
- How is data transformed between systems?
- Which source systems feed which systems, and how?

The effect of a change is not known before it is made — categories 3 · 4

Master data and data quality

- Is the data of good quality? Are quality metrics defined and measured?
- Is data validated? Is it unique?
- Can one view of customer and product be followed across channels?

Quality judged by opinion rather than measured — categories 5 · 6

Data security

- Is the data secure? Where is sensitive data across systems?
- Is sensitive data protected? Can test data be managed?
- Are risk scores calculated for data stores?

Sensitive data not classified where it is stored — categories 7 · 8

Governance and regulation

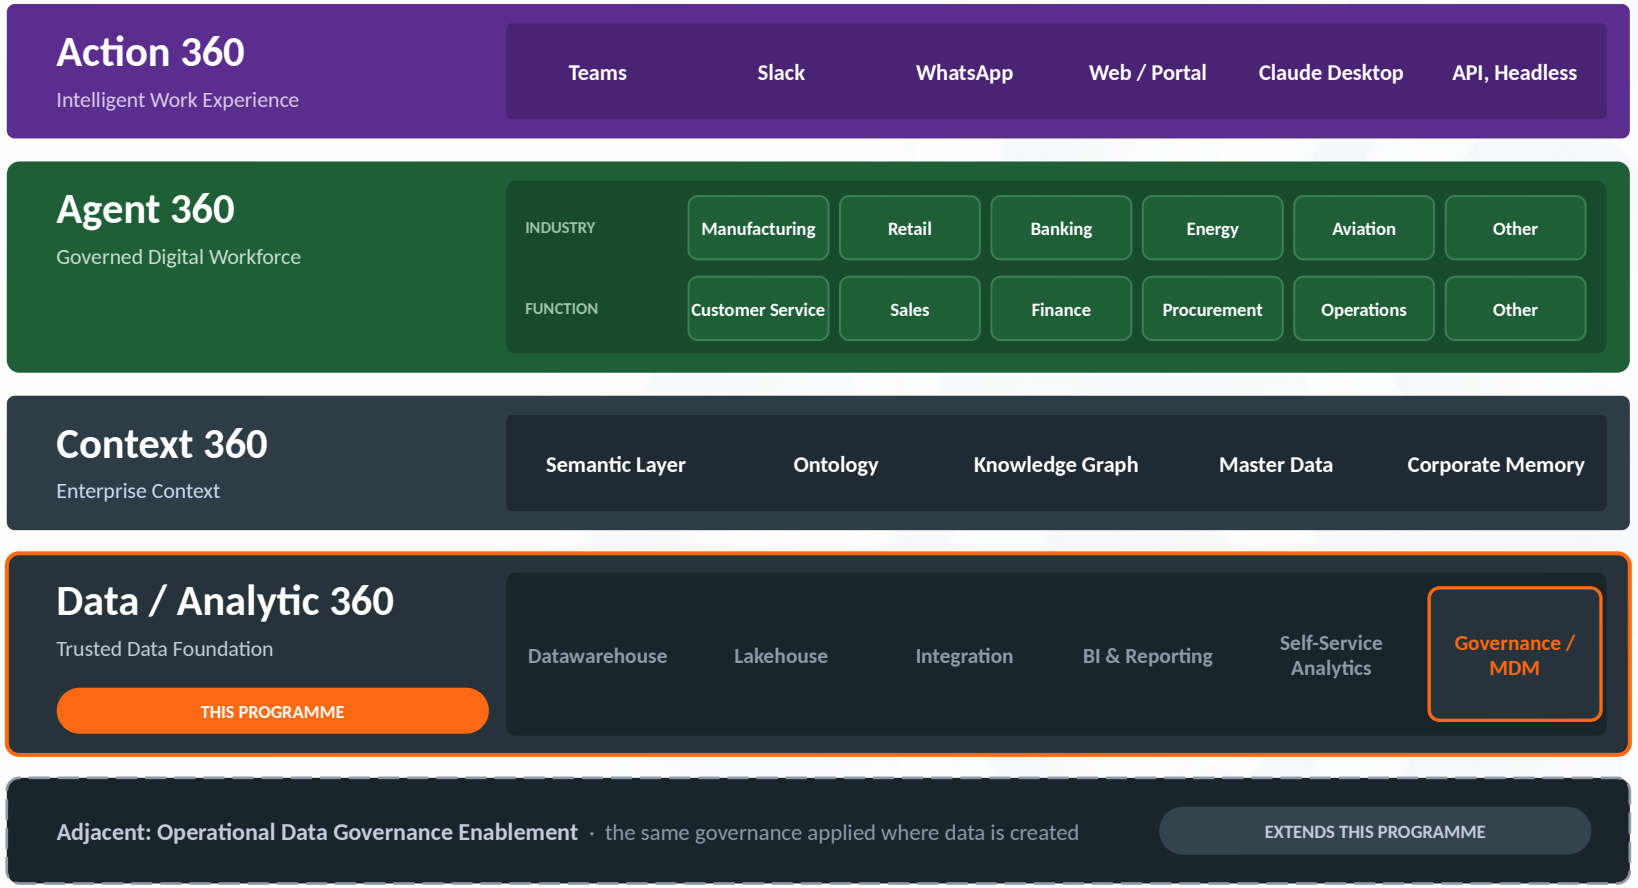

- Is data managed across the whole organisation?
- Is there a council that gives direction at enterprise level?
- Is the organisation compliant with GDPR, KVKK and similar rules?

Exposure to regulatory findings and penalties — categories 1 · 2

Where This Programme Sits — AI Value Proposition

KOMTAS

Four layers. Each layer consumes the one below. This programme builds the governance part of the trusted data foundation that the upper layers depend on.

Context 360

Agreed business terms, owners and classification give the semantic layer, ontology and knowledge graph a consistent meaning to build on.

Agent 360 / Action 360

AI-ready governance: an agent should use data whose definition, owner, quality and sensitivity are known. Catalogue, lineage and classification show what it may use and where a value came from.

Analytic side

Catalogue, lineage and quality scorecards make reports and self-service analytics traceable.

Every upper layer depends on governed data. This programme sets the owners, definitions, quality rules and lineage the layers above use.

Three Pillars, Built Together and in the Right Order

KOMTAS

The method follows DAMA-DMBOK and is aligned with COBIT and KVKK. Its success depends on all three pillars being built so that they support each other.

02 · APPROACH

Organisation and roles
defines how decisions are made

- Data governance office
- Data owner, data steward, data custodian
- Committees and decision rights
- Approval and escalation path

Policies and processes
standardise behaviour

- Policy and procedures
- Six standard governance processes
- Role-based RACI matrix
- Glossary and DQ templates

Technology
makes both visible and measurable

- Business glossary and data dictionary
- Catalogue, lineage and impact analysis
- Classification of sensitive data
- DQ rules and scorecards

WHEN ONE PILLAR IS MISSING

Policies and processes only

The framework is hard to carry into daily operations and to scale.

Technology only

Without ownership, processes and decision rights, use and ownership do not last.

REFERENCE FRAMEWORKS

DAMA-DMBOK	backbone of the method
COBIT	control objectives, auditability
KVKK	personal data inventory, classification, retention, access

Why phases? Technology is treated as the result of an objective decision drawn from needs, priorities and target maturity, not as the starting assumption. The scope and timing of the technology investment stay in your hands, and the framework carries straight into implementation.

One Programme in Three Tiers

KOMTAS

Each tier can be contracted on its own. Strategy & Framework is product-independent; Technology Enablement is priced module by module; Managed Service is optional.

02 · THE PROGRAMME

A Strategy & Framework

Phase 1 · product-independent

- Maturity assessment in ten categories
- Awareness sessions
- Strategy, framework and organisation model
- Policies, processes and RACI
- Glossary, data dictionary and DQ templates
- Pilot on the platform for one domain
- Roadmap: short, medium and long term

OPTIONAL

Technology selection support · process and data-flow analysis · DQ assessment on a sample dataset

B Technology Enablement

Phase 2 · Informatica · per module

- B1 Business glossary and data dictionary
- B2 Data catalogue, lineage and classification
- B3 Data quality
- Platform workshop and end-user workshop
- Technical and user documentation

OPTIONAL

Developer training · post-go-live support for an agreed number of months

C Managed Service

Phase 3 · optional · 12 months

- Demand-based capacity in MSU per month
- Data quality and data governance service catalogue
- Planning by priority and dependency
- P1 / P2 / P3 support levels
- Continuous improvement

ENTRY OPTION

Hypercare in the first months after go-live

Entry points. Most programmes start with A. Where a framework already exists, B can start directly. Where a platform is already installed, B runs as a rollout to new domains or as a migration from on-premises to IDMC.

The Maturity Assessment — Ten Categories

KOMTAS

The first work package of Strategy & Framework. Each category is scored for its current and target level (1–5); the gap and the improvements that close it are reported.

02 · MATURITY ASSESSMENT

1 **Data governance organisation**
roles, committees, decision rights, ownership, escalation

2 **Policies, standards and processes**
existence, currency, applicability and follow-up

3 **Data architecture**
source system inventory, integration topology, target fit

4 **Metadata and data catalogue**
technical and business metadata, catalogue use, lineage

5 **Data quality**
critical data elements, dimensions, rule sets, measurement

6 **Master and reference data**
golden record, de-duplication, reference data

7 **Data security and privacy**
classification, access control, KVKK, personal data inventory

8 **Data lifecycle**
creation, retention, archiving, disposal policies

9 **Analytics and data usage**
reporting discipline, single metric definitions, self-service

10 **Culture, awareness and competence**
data literacy, training, adoption, change management

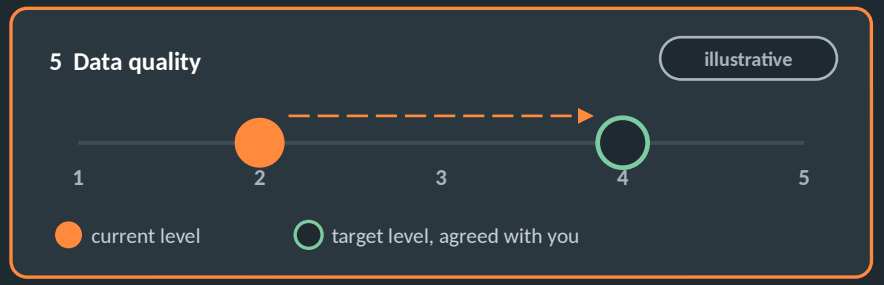

HOW IT IS MEASURED

Structured interviews
business units, data owners, IT, information security, internal audit

Document review
existing policies, procedures and process documents

Technical inventory
source systems, integration, existing metadata

WHAT IS REPORTED PER CATEGORY

Current level · target level · gap · improvement actions → roadmap

What You Get

KOMTAS

Deliverables per tier, and the benefit each tier is meant to bring. Each deliverable is shared as a draft and finalised after your feedback.

03 · OUTCOMES

A Strategy & Framework

- Maturity assessment report
- Organisation model and role definitions
- Strategy and target framework document
- RACI matrix
- Glossary and DQ rule templates
- Policy and procedure
- Roadmap and closure report
- RFI/RFP draft, if selection is in scope

BENEFIT

Clear ownership, a common data language, focus on critical data, a shared basis for business and IT.

B Technology Enablement

- Glossary, catalogue and lineage in use
- DQ rules running, scorecards
- Technical design document
- DQ rules document
- Test scenarios
- End-user and technical operations documents
- Operational manual

BENEFIT

End-to-end visibility, change impact analysed with evidence, data quality monitored continuously.

C Managed Service

- Monthly capacity for DQ and DG requests
- New terms, rules, workflows and sources
- Issue analysis and root cause
- Support at P1 / P2 / P3 levels

BENEFIT

Knowledge kept, quick response, and the investment stays in use as needs change.

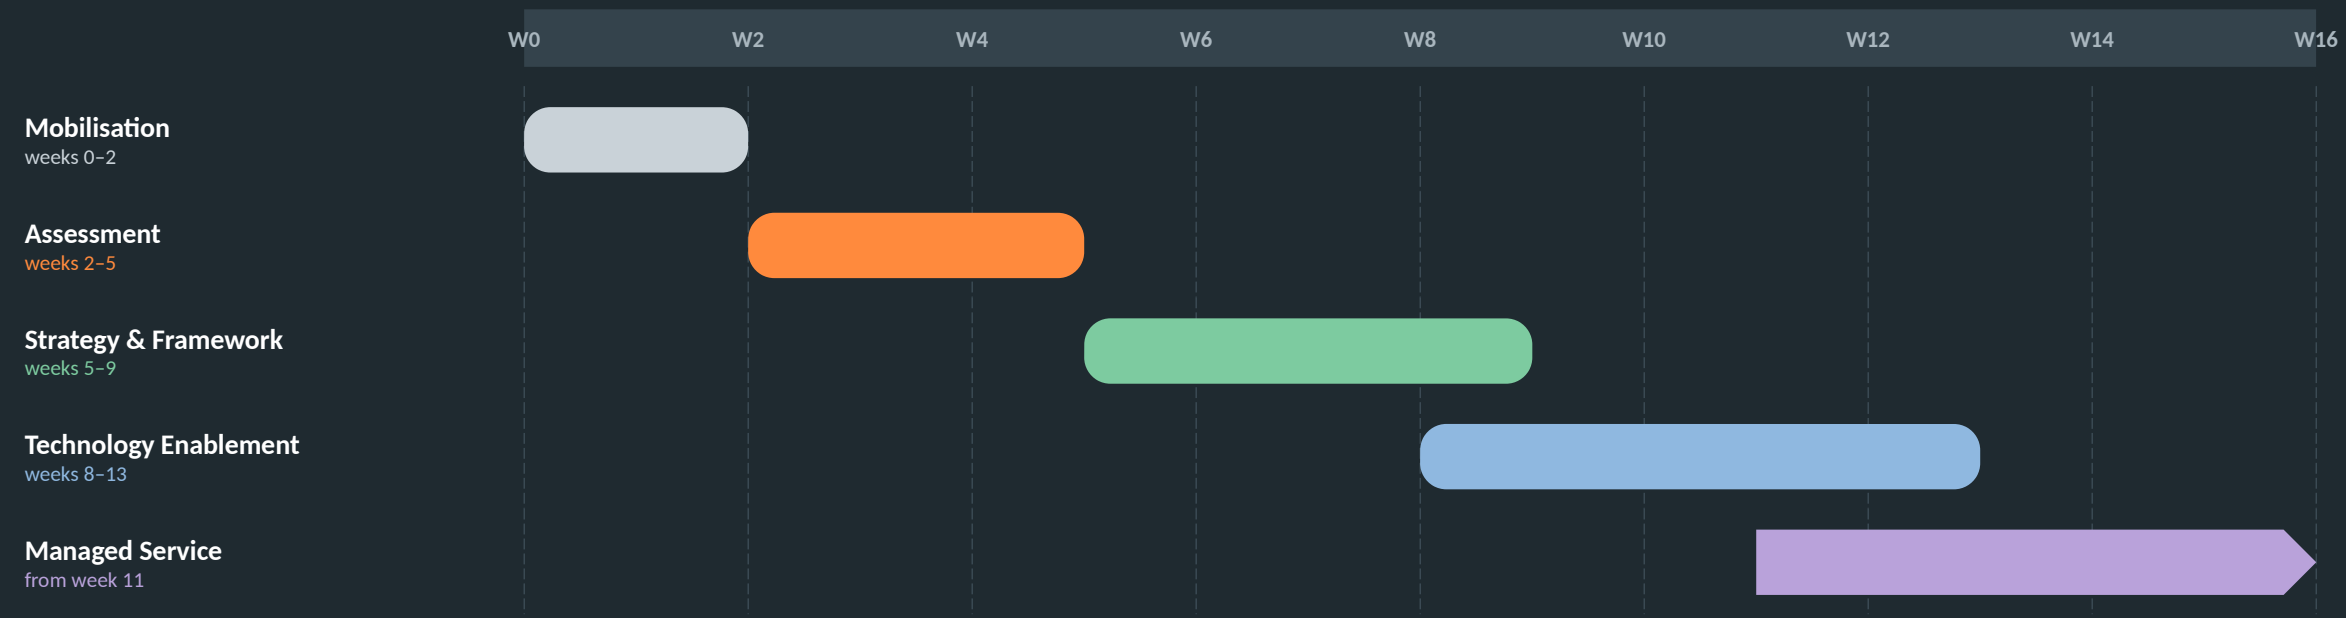

Yours to keep. Deliverables are handed over in editable form with a PDF copy, and the training material from the awareness sessions stays with your teams.

Pilot First — Indicative Timeline

KOMTAS

Indicative weeks for a pilot-first programme on one domain. Exact durations are set after a detailed scoping with you and may change.

03 · TIMELINE

TYPICAL DURATIONS FOR A FULL SCOPE

Strategy & Framework	**6–12 weeks**	by number of units interviewed, pilot domains, group companies and optional blocks
Technology Enablement	**8–16+ weeks**	by modules, source systems, tables and reports, domains and DQ rules; B3 can run in parallel
Managed Service	**12 months**	monthly capacity agreed in MSU

Why a pilot first. One domain is taken through glossary terms, ownership and sample DQ rules on the platform during Strategy & Framework, so roles and processes are tested before they are rolled out.

Why Komtaş, and the Next Step

How the programme is run, and what is needed to start.

04 · WHY KOMTAŞ AND NEXT STEP

WHY KOMTAŞ

Product-independent method
DAMA-DMBOK and COBIT; a technology recommendation is the result of the assessment, not a decision made in advance.

Partner ecosystem
Partner of more than ten global vendors: a real set of alternatives, and implementation depth in the product chosen.

Informatica depth
IDMC and on-premises Axon, EDC and IDQ; implementation, migration and rollout to new domains.

Group-scale experience
Multi-company programmes: subsidiary autonomy, different maturity levels, central standards with local flexibility.

AI-ready governance
“From Data to Agents”: the framework is designed so that it can extend to AI governance.

NEXT STEPS

1. **Walkthrough** — today — you are here
2. **Scoping call** — domains, units to interview, group structure
3. **Proposal** — Strategy & Framework, indicative weeks
4. **Kick-off** — interview plan and document request

Since 1989, focused on data · 250+ specialists · offices in Istanbul, Ankara, Izmir and Dubai

Needed from you. A sponsor and a coordinator, and representatives from the business units, IT / data architecture and information security and compliance.

APPENDIX

Detail — for reference and questions

A	**Method and Strategy & Framework** Ten categories in detail · Work packages and optional blocks	p. 12 – 13
B	**Technology and managed service** Modules B1–B3 · Platform options · MSU model · CLAIRE and agents	p. 14 – 17
C	**Roles and scope** Roles and governance · Scope and adjacent services	p. 18 – 19

The Ten Categories in Detail

KOMTAS

Assessment focus per category, and where the findings are usually taken forward in the programme.

#	CATEGORY	ASSESSMENT FOCUS	TAKEN FORWARD IN
1	Data governance organisation	Roles, committees, decision mechanisms, ownership model, escalation	A organisation model, role definitions
2	Policies, standards and processes	Existence, currency, applicability and follow-up of written policies	A policies, processes, RACI
3	Data architecture	Source system inventory, integration topology, fit with the target architecture	A roadmap · B2 source scope
4	Metadata and data catalogue	Technical and business metadata coverage, catalogue use, lineage visibility	B1 glossary · B2 catalogue, lineage
5	Data quality	Critical data elements, quality dimensions, rule sets, measurement and reporting	A DQ templates · B3 data quality
6	Master and reference data	Golden record definition, de-duplication, reference data management and distribution	A roadmap (MDM scoped separately)
7	Data security and privacy	Classification, access control, KVKK compliance, personal data inventory	A classification scheme · B2 tagging
8	Data lifecycle	Creation, retention, archiving and disposal policies and how far they are applied	A policies
9	Analytics and data usage	Reporting discipline, single metric definitions, self-service maturity	B1 terms and metrics
10	Culture, awareness and competence	Data literacy, training level, adoption and change management	A awareness sessions · C steward onboarding

Scale 1–5 for current and target level. The target level is set together with you; the gap per category becomes the improvement list behind the roadmap.

Strategy & Framework — Work Packages

KOMTAS

Tier A is run independently of any product. Interviews, workshops, document review and technical inventory are combined.

WORK PACKAGE	CONTENT
Maturity assessment	Domain and units to interview agreed; structured interviews; document review; scoring and gap analysis in ten categories; target level agreed
Awareness sessions	Executive and general sessions on data governance; training material handed over
Strategy, framework, organisation	Vision, principles, goals; target framework; DG office, owner, steward, custodian, committees; decision and escalation; central standard and local flexibility
Policies, processes, RACI	Policy and procedures; the six standard processes; role-based RACI matrix
Glossary, metadata, DQ templates	Glossary and data dictionary structure; DQ dimensions, thresholds and frequency; classification scheme; personal data inventory structure
Pilot on the platform	For one domain: terms and ownership defined on the platform; sample DQ rules on a sample dataset with results shown
Roadmap	Short-, medium- and long-term actions; technology requirements for rollout

THE SIX STANDARD PROCESSES

1. New data creation in the database
2. New glossary term
3. Periodic glossary review
4. Data governance committee
5. DQ rule definition
6. DQ measurement and monitoring

OPTIONAL BLOCKS

Technology selection support
RFI/RFP criteria, POC scenarios, vendor evaluation

Process and data-flow analysis
End-to-end flow of a data set, manual and off-system sources, digitalisation gaps

DQ assessment on a sample
Profiling of real data to size later DQ work

Technology Enablement — Modules

KOMTAS

Tier B is priced module by module. Limits such as domains, tables, reports and rules are agreed per proposal.

B1 Business glossary and data dictionary

- Glossary structure: domain, subdomain, business term, metric
- Terms for the agreed domain, prepared by data owners on a template
- Ownership and stakeholder assignment
- Approval workflow for terms
- Link between terms and physical metadata

~4 weeks · indicative

B2 Data catalogue, lineage and classification

- Metadata scanning of agreed source systems: databases, ETL, reporting
- Lineage and impact analysis to the extent the product supports
- Discovery and tagging of sensitive data on a sample
- Scans run as scheduled batch jobs

~7 weeks · indicative

B3 Data quality

- Profiling of the agreed tables
- DQ rules for the agreed terms and records
- Measurement, thresholds and scorecards
- Results linked to glossary terms
- Unit and user acceptance tests

~8 weeks · can run in parallel · indicative

WITH EVERY MODULE Platform workshop for the DG office · end-user workshop · optional developer training (digital or classroom) · optional post-go-live support

VARIANTS

Migration

On-premises Axon, EDC and IDQ moved to IDMC: terms, resources, DQ rules and integrations.

Rollout

Platform already installed: new domains added in waves, reusing the standards of the previous wave.

Platform Options

KOMTAS

Technology Enablement is delivered on one of two Informatica platform blocks. The block that matches your landscape is used.

CAPABILITY	IDMC · CLOUD	ON-PREMISES
Glossary and governance	Cloud Data Governance and Catalog (CDGC)	Axon
Catalogue, lineage, classification	CDGC with Metadata Command Center	Enterprise Data Catalog (EDC)
Data quality	Cloud Data Quality (CDQ)	Informatica Data Quality (IDQ)
Connection to sources	Secure Agent on a server you provide	Installed on your servers
Single sign-on	SAML, for example Azure AD	LDAP
AI assistance	CLAIRE Copilot, CLAIRE GPT, CLAIRE Agents, MCP	—
Developer training	CDGC / CDQ for Developers	Axon / EDC / IDQ for Developers

Licences are a separate proposal. This programme covers services. Supported source systems and product capabilities are confirmed for your edition during scoping.

Managed Service — the MSU Model

KOMTAS

A demand-based service for data quality and data governance after go-live, with monthly capacity measured in MSU.

HOW IT WORKS

- 12 months from the contract start
- Monthly capacity in MSU, agreed in the proposal
- Unused MSU carries over to later months
- Extra MSU can be bought if needed
- Capacity is used across catalogue items as you prioritise
- Work is planned by priority, dependency and MSU use

MSU is a service consumption unit that reflects the relative size and complexity of an item in the service catalogue.

SERVICE CATALOGUE · EXAMPLES

Data quality

- DQ rule business definition
- Technical design and rule templates
- Simple, medium and complex rules
- Anomaly-based DQ rules
- Thresholds, scorecards, dashboards
- Issue triage and root cause analysis
- Data standardisation flows

Data governance

- Glossary terms and term mapping
- Glossary approval workflow
- Domains, policies and standards
- Data steward onboarding
- Governance meetings and issues
- Metadata for additional systems
- Metadata enrichment, impact analysis

SUPPORT LEVELS

LEVEL	MEANING	FIRST RESPONSE
P1 Critical	Full outage in production; operation stopped	1 hour · 7×24
P2 High	Major outage or serious performance loss	4 hours
P3 Low	No effect on operation; questions	next business day

Service hours Monday to Friday, 08:00–17:00, excluding public holidays. Requests by phone, support portal or e-mail.

AI-Ready Governance — CLAIRE and the Agentic Direction

KOMTAS

What the IDMC platform provides today, and how the governance built in this programme serves agents.

AVAILABLE ON IDMC

CLAIRE Copilot
natural-language help inside the product: create and understand assets, get suggestions

CLAIRE GPT
discovery, queries and documentation in natural language

CLAIRE Agents
agents specialised in tasks such as discovery, data quality and lineage

AI-assisted data quality
DQ rules drafted from business needs stated in natural language

MCP support
IDMC capabilities served to AI agents and LLMs over the open Model Context Protocol

DIRECTION

Governance as a service
Glossary, catalogue, quality and lineage become governed services that agents can call through MCP.

Agent-assisted stewardship
Agents propose domains, owners, terms, DQ rules and impact analyses; data stewards review and approve.

Repeatable expansion
Adding a new domain or company reuses the same flow and the standards already in place.

What this programme contributes. Agents can only be as governed as their inputs: the owners, definitions, classification and DQ rules set up here are what agent-based governance builds on.

Product capabilities change. Current support for your edition is confirmed during scoping.

Roles and Programme Governance

KOMTAS

Who Komtaş brings, who takes part on your side, and how progress is followed.

KOMTAŞ TEAM

- **Project manager** plan, scope, risk, change and communication; part time
- **DG team leader** method, framework and organisation design, deliverable quality
- **DG consultant** interviews, maturity scoring, policies and processes
- **DQ team leader** quality analysis, rules and controls
- **DQ consultant** critical data elements, rules, glossary and metadata standards

All team members are full-time Komtaş employees.

YOUR SIDE

ROLE	TAKES PART IN
Project sponsor	owner of the programme; chairs the steering committee; escalation
Project coordinator	day-to-day contact; meetings, access, documents
Business unit representatives	interviews and workshops; validate rules and definitions
IT / data architecture	system inventory, technical metadata, environments
Information security and compliance	classification, KVKK and access policies

PROGRAMME GOVERNANCE

Weekly progress meeting
work done, planned work, open items and risks; written report in advance

Monthly steering committee
milestones, scope and budget, critical risks, decisions

Change requests
impact on scope, timeline and cost assessed; applied only after written approval

Scope and Adjacent Services

KOMTAS

What the programme covers, what it does not, and related work offered separately.

IN SCOPE

- Maturity assessment, strategy, framework and organisation model
- Policies, the six standard processes and RACI
- Glossary, data dictionary and DQ templates; pilot domain
- Glossary, catalogue, lineage, classification and DQ on the platform
- Workshops, documentation and optional training
- Optional managed service and post-go-live support

OUT OF SCOPE

- Hardware, cloud infrastructure, operating system, database and network
- Development or fixes in source systems
- Historical data cleansing, correction and migration
- Legal opinion and KVKK compliance audit
- Internal or external audit and regulatory filings
- Cleansing, matching or de-duplication beyond DQ checks

ADJACENT SERVICES

Operational Data Governance Enablement
governance at creation and change in operational systems

AI Governance Readiness
governance of models and agents

Data Product Delivery
governed data products

Data Mesh Readiness
federated, domain-owned governance

Technology licences
separate proposal

Two boundaries. Strategy & Framework does not install or operate a catalogue or quality platform beyond the pilot; that is Technology Enablement. Governance is tracked with the dashboards and reports built into the product; a separate dashboard or BI tool is not designed or built.
