Managed Service

Technical and Commercial Proposal

Demand-Based Data Governance and Data Quality Managed Service on the MSU Model: Service Catalogue, Support and Service Levels

Proposal No: KOMTAS-«CUSTOMER ABBREVIATION»-DGC-«YEAR»-«SEQUENCE»

Proposal Date: «dd Month yyyy»

Validity: «proposal date + 1 month»

VARIABLE GLOSSARY — in this template only the fields inside « » change per customer. All other text is fixed.

Identity: «CUSTOMER» short customer name used in the text · «CUSTOMER NAME» full legal name (cover) · «CUSTOMER ABBREVIATION» short code in the proposal number · «YEAR» year · «SEQUENCE» proposal sequence number · «dd Month yyyy» proposal date · «proposal date + 1 month» end of validity · «price validity date» latest start date for which the fees stay valid

Context: «CUSTOMER CONTEXT» one paragraph: single company or group with subsidiaries, sector, starting point, reason for the request · «GROUP COMPANIES» group companies in scope; delete the line or row for a single company

Platform: «LICENCE PROPOSAL REF» number and date of the separate licence proposal

Options: «OPTIONAL» optional paragraph, row or block: keep or delete; if kept, delete the marker

Values: «N» numeric value (count, days, weeks, months)

Commercial: «fee» fee excl. VAT · «amount» payment amount excl. VAT · «MSU unit fee» fee per MSU or per monthly MSU package · «CITY» city where on-site work is free of charge

Annex: «REFERENCES» reference projects approved for this proposal (no names without permission)

Contacts: «full name» contact name · «title» contact title · «e-mail / phone» contact details

Markers: blocks or rows marked OPTIONAL are kept or deleted by sales; if kept, only the marker is deleted. FILL NOTE boxes are internal and are deleted before sending.

Contents

FILL NOTE — this template is for Service C, sold after go-live of Service B or for an installed data governance and data quality platform. It is a 12-month, demand-based service measured in MSU (managed service units).

Standard capacity: 150 MSU per month for 12 months. The MSU values in Table 3 are the agreed sizes of the catalogue items and are not changed per customer; if a customer needs an item that is not in the catalogue, its MSU value is agreed in writing before the work.

Entry option: post-go-live support (hypercare) of «N» months (Section 4.4) can be sold as the first step of Service C. Delete Section 4.4 and its row in Table 9 if it is not sold.

Order of completion: Section 1 context → Table 1 → Section 4.4 → Section 9 fees → Sections 10–12 → remaining placeholder fields.

1. Executive Summary

«CUSTOMER CONTEXT»

The aim of this service is to meet the data quality and data governance needs of «CUSTOMER» in a sustainable way after go-live: the structures in place are operated and developed, and new needs are put into use within an agreed service capacity.

The service is delivered as a demand-based managed service that ranges from the definition and implementation of data quality rules to the development of the business glossary, metadata, lineage, workflows, authorisation and governance processes. The data governance programme consists of three services:

- **Service A — Strategy and Framework Design (separate proposal):** Run independently of any product: maturity assessment, governance organisation and role model, policy and process set, data glossary and data quality standards, pilot and roadmap.
- **Service B — Technology Enablement (separate proposal):** Adaptation and deployment of the technology in line with the target governance model and the priority use cases, and delivery of training.
- **Service C — Managed Service (this proposal):** Managed service and technical support after go-live, supporting sustainability and rollout within the organisation.

Item	Value
Service period	«N» months from the contract start date
Monthly service capacity	«N» MSU
Unused capacity	Carried over to the following months within the service period
Additional capacity	Additional MSU can be purchased if the package is not sufficient
Scope	All data quality (DQ) and data governance (DG) activities in the service catalogue (Table 3)
Support	P1 / P2 / P3 service levels, 7×24 for P1 (Section 5)
«OPTIONAL» Entry option	Post-go-live support (hypercare) for «N» months

Table 1 — Summary of the managed service.

Main benefits — the detailed list is given in Section 2.2.

- **Continuity of knowledge:** the knowledge built in the earlier phases is kept and carried into operations.
- **Fast response:** technical and operational needs in live use are handled by experienced specialists.
- **Continuous improvement:** the structure and use cases are developed as the needs of «CUSTOMER» change.

Technology licences are not included in this proposal; they are offered separately in «LICENCE PROPOSAL REF».

2. Approach and Expected Benefits

2.1 Why a Managed Service after Go-Live

A data governance platform delivers value only if it stays in use after go-live: new terms, rules and sources are added, owners and stewards change, and quality issues need follow-up. The support and continuity services of Service C aim to operate the live solution effectively and without interruption over the long term, and to keep the governance model, processes and technology aligned as the organisation changes.

The MSU model gives «CUSTOMER» one capacity that can be used flexibly across different service items according to its own priorities, instead of a separate contract for each piece of work.

2.2 Key Benefits

- **Continuity of knowledge and competence:** the corporate and technical knowledge built in Services A and B is kept and carried into operational processes.
- **Fast response and resolution:** technical or operational needs arising in live use are handled quickly by experienced specialists.
- **Operational continuity:** monitoring, maintenance and support activities are carried out to keep the data governance platform in uninterrupted and sustainable use.
- **Continuous improvement:** the current structure and use cases are developed and improved in line with the changing data governance needs of the organisation.
- **Efficient use of corporate resources:** internal teams do not need to build additional expertise and capacity for every topic; continuous access to the required technical competence is provided.
- **Sustainability of the investment:** the technology investment made in Service B is not limited to go-live; its effective use over the long term and its adaptation to the changing needs of the organisation are secured.

3. Method

3.1 MSU Model

MSU (managed service unit) is the consumption unit of the service. It expresses the relative size and complexity of the work items in the service catalogue. The MSU value of each catalogue item has been agreed between the parties (Table 3).

- The monthly service capacity is «N» MSU.
- MSU not used in a month can be carried over to the following months within the service period.
- If the MSU package is not sufficient, additional MSU can be purchased.
- The MSU capacity can be used across the different service items according to the requests prioritised by «CUSTOMER».
- Completion of every service item within one month is not committed; work is planned according to priority, dependencies and MSU consumption.

3.2 Request Flow

Step	What Is Done	Responsible
Request	The request is submitted through the agreed channel with its business need	«CUSTOMER»
Sizing	The request is mapped to catalogue items and its MSU consumption is stated	Komtaş
Prioritisation	Requests are ordered by priority; the order is confirmed	«CUSTOMER»
Planning	Work is planned according to priority, dependencies and the remaining capacity	Komtaş
Delivery and approval	The work is delivered and approved; the MSU consumed is recorded	Komtaş, «CUSTOMER»

Table 2 — Request flow.

Incidents in live use are not consumed from the MSU capacity; they are handled under the support scope and service levels in Sections 4.3 and 5.

4. Scope

4.1 Service Scope

- Operation and development of the data quality and data governance structures in place on the platform of «CUSTOMER».
- Definition and implementation of data quality rules, thresholds, scorecards and dashboards; issue analysis and root cause analysis.
- Development of the business glossary, metadata, lineage, workflows, authorisation and governance processes.

- All data quality (DQ) and data governance (DG) activities in the service catalogue are within scope.

4.2 Service Catalogue

The possible work items and their MSU consumption, as agreed between the parties, are listed below.

Area	Activity	Description	MSU
Data Quality	DQ rule business definition	Defining the DQ business rule	10
Data Quality	DQ rule technical design	Converting the business rule into technical logic	10
Data Quality	DQ rule template creation	Creating a reusable rule	10
Data Quality	DQ rule, simple implementation	Null / format check	10
Data Quality	DQ rule, medium-complexity implementation	Cross-field validation	20
Data Quality	DQ rule, complex implementation	Validation across several tables	30
Data Quality	AI / anomaly DQ rule	Advanced anomaly detection	50
Data Quality	Rule execution set-up	Configuring rule execution	10
Data Quality	Threshold definition	Setting acceptance thresholds	10
Data Quality	Scorecard creation	Defining score metrics	20
Data Quality	Dashboard set-up	Building the DQ monitoring dashboard	50
Data Quality	Issue pre-assessment	First analysis of an issue	10
Data Quality	Root cause analysis	Identifying the root cause	20
Data Quality	Data standardisation flow	Correcting the target data	50
Data Governance	Glossary terms (10)	Defining 10 business terms	10
Data Governance	Term relationship mapping	Linking terms to assets	10
Data Governance	Glossary approval workflow	Defining the term approval life cycle	50
Data Governance	Glossary domain creation	Creating the domain structure	20
Data Governance	Adding a policy	Adding a governance policy	50
Data Governance	Defining a standard	Defining a standard	20
Data Governance	Data steward onboarding	Support for a data steward	10
Data Governance	Governance meeting	Holding a governance meeting	10
Data Governance	Issue management	Tracking governance issues	50
Data Governance	Metadata of another system	Cataloguing technical metadata	100
Data Governance	Metadata enrichment	Adding business metadata	20
Data Governance	Impact analysis extension	Configuring impact analysis	20

Table 3 — Managed service catalogue and MSU values.

4.3 Support Scope

The application maintenance and support within the service covers:

- **Technical support for software problems:** investigation, diagnosis and resolution of software problems that occur when the application software under maintenance and support does not work.
- **Management of support requests:** support requests sent by «CUSTOMER» by phone, through the Komtaş support portal or by e-mail are recorded, assessed by priority and the support process is started.
- **P1, P2 and P3 support:** software problems are classified as P1 (critical), P2 (high) and P3 (low) according to their impact, and support is given at the related service levels.
- **7×24 support for critical problems:** 7×24 support for P1 problems that cause a complete outage and stop operations in the production environment.
- **Right to new releases and updates:** where the licence subscription and maintenance are provided through Komtaş («LICENCE PROPOSAL REF»), the new major releases, minor releases, maintenance releases and software fixes

made generally available during the valid subscription and maintenance period can be obtained and used at no additional fee.

- **Software fixes:** use of the software fixes provided by the vendor or by Komtaş to resolve the problem concerned.

4.4 «OPTIONAL» Post-Go-Live Support (Hypercare)

As the entry option of Service C, the following support is provided after go-live of the platform:

- Support for «N» months after go-live and deployment.
- Outside the scope of application maintenance, technical and functional support of at most «N» days per week for questions and issues met in further developments.
- Analysis of issues met in the use of data governance, the data catalogue, data quality and the related governance processes, and proposal of solutions.
- Support for users with the application and usage problems they meet, and running the resolution where needed.
- Assessment of new needs arising during the support period and identification of the actions that can be applied within scope.

5. Service Levels

«CUSTOMER» can request support for the application software during the service hours defined below and reports software problems according to the service levels below. The Komtaş customer support representatives record the problem and arrange the start of its resolution in line with the service hours.

- Service hours for support and maintenance: Monday to Friday, 08:00–17:00, excluding public holidays.
- 7×24 support is provided for problems with critical priority (P1).

Service	How to Reach It
Service centre	1) By phone 2) Through the Komtaş portal (https://support.komtas.com) 3) By e-mail (support@komtas.com)

«CUSTOMER» sets the initial priority of the problem according to the definitions below:

Priority	Description	First Response Time
P1 — Critical	Complete outage and stop of operations in production environments.	1 hour
P2 — High	Major outage or serious performance degradation of operations in production environments.	4 hours
P3 — Low	Problems with no effect on operations, and questions about the products under maintenance.	Next business day

Table 4 — Priority levels and service levels.

6. Deliverables

The outputs of the service are produced per request. The output of each request (for example a rule, a scorecard, a workflow, a set of terms or a catalogued source) is stated when the request is sized and is approved by «CUSTOMER» on delivery.

#	Output	Frequency
1	Completed catalogue items with their MSU consumption	Per request
2	Monthly service summary: requests received, completed and planned; MSU consumed, carried over and remaining	Monthly
3	Support records of P1 / P2 / P3 problems and their resolution	Per problem
4	«OPTIONAL» Hypercare closing note: open topics and handover to the MSU service	End of hypercare

Table 5 — Service outputs.

7. Service Plan

Stage	Content	Duration
«OPTIONAL» Hypercare	Post-go-live support as described in Section 4.4	«N» months
Service start	Contacts, request channel and access confirmed; open topics from Service B taken over; first backlog prioritised	«N» weeks
Service operation	Monthly cycle of request, sizing, prioritisation, planning, delivery and approval	«N» months
Service review	Review of consumption and needs; decision on extension, capacity change or additional MSU	End of the service period

Table 6 — Service plan.

8. Service Organisation, Team and Governance

8.1 Komtaş Service Team

The project is led by a senior data governance consultant, with specialists joining the work packages where they are needed. The CVs of the key role holders are submitted for the approval of «CUSTOMER» in the annex (ANNEX-2 Service Team and CVs).

Statements on the qualifications of the team:

- All team members assigned to the project are full-time employees of Komtaş; no subcontractors or freelancers are used.
- The Senior Data Governance Consultant who leads the team has at least 8 (eight) years of field experience in data governance.
- **«OPTIONAL»** The team has expertise in the Informatica product family and working knowledge of at least 3 (three) of the leading data management and data governance tools.
- If a change in the team is needed, the CV of the proposed replacement is submitted in advance for the approval of «CUSTOMER»; the replacement has at least equivalent qualifications.

Role	Responsibility	Involvement
Service Manager (Project Manager)	Request intake, sizing, planning, MSU tracking, reporting	Throughout the service period
Data Governance Consultant	Glossary, metadata, lineage, workflow and governance items	Per request
Data Quality Consultant	DQ rules, thresholds, scorecards, dashboards, issue and root cause analysis	Per request
Support Engineer	P1 / P2 / P3 support, Secure Agent and platform configuration	Per problem

Table 7 — Komtaş service team and roles.

8.2 Expected Participation of «CUSTOMER»

The success of the programme depends on the active participation of the stakeholders of «CUSTOMER» listed below. These roles are expected to be assigned for the duration of the project and to take part in the work to the extent their tasks require.

- **Project Sponsor:** Owner of the programme within the organisation; chairs the steering committee and is the escalation point.
- **Project Coordinator:** Day-to-day contact; coordinates meetings, access and documents.
- **Business Unit Representatives:** Take part in interviews and workshops; validate business rules and definitions.
- **IT / Data Architecture Representative:** Provides the system inventory, technical metadata and environment information.
- **Information Security and Compliance Representative:** Validates classification, KVKK and access policies.

8.3 Governance and Reporting

The service is monitored through a two-level governance model:

- **Planning meeting:** held at the frequency agreed with «CUSTOMER»; new requests, priorities, work in progress and open issues are reviewed.
- **Monthly steering meeting:** with the service owner of «CUSTOMER»; MSU consumption, delivered items, service levels, risks and pending decisions are reviewed.

All requests, deliveries and decisions are kept in a shared record; approvals of delivered items are obtained in writing.

8.4 Risk and Change Management

Scope changes are managed through a written change request. An impact analysis (scope, schedule, effort, fee) is prepared for each request, and no change is implemented without the written approval of «CUSTOMER».

Expected Risk	Impact	Mitigation
Demand above the monthly capacity	Delay of lower-priority requests	Prioritisation by «CUSTOMER»; carry-over of unused MSU; purchase of additional MSU
Delay in access or in input from business units	Requests waiting	Requests with missing input are put on hold and the capacity is used for the next priority
Changes to the platform by third parties	Unexpected issues	Platform changes are announced to Komtaş in advance

Table 8 — Expected risks and mitigations.

9. Fees and Payment Schedule

FILL NOTE — the standard package is 150 MSU per month for 12 months, invoiced monthly. Write the monthly fee and the annual total; additional MSU are priced per MSU.

Item	Unit	Unit Fee (excl. VAT)	Amount (excl. VAT)
Monthly managed service × «N» months	«N» MSU × «N»	«MSU unit fee»	«amount»
«OPTIONAL» Post-go-live support (hypercare), «N» months	«N» months	«fee»	«amount»
Additional MSU	Per MSU	«MSU unit fee»	On request
Total (annual)			«fee»

Table 9 — Managed service fees. All fees exclude VAT.

- The managed service is invoiced monthly in equal instalments over the service period.
- Additional MSU are invoiced when they are ordered.
- «OPTIONAL» Hypercare is invoiced in equal monthly instalments over the hypercare period.
- Technology licences and vendor maintenance fees are not included; they are offered in «LICENCE PROPOSAL REF».

10. General Assumptions

The scope, capacity and fees in this proposal are based on the assumptions below. If they do not hold, the impact is assessed through the change management process.

- The service can start within «N» working days of contract signature.
- «CUSTOMER» appoints a service owner and a coordinator who submits and prioritises the requests.
- Requests are submitted through the agreed channel; requests whose input is missing are planned after the input is received.
- Access to the platform and to the source systems needed for the requests (access and authorisations) is provided and kept by «CUSTOMER».
- The platform licences are valid during the service period.
- Changes made to the platform or to the source systems by third parties are announced to Komtaş in advance.
- The work is carried out mainly remotely. On-site work in «CITY» is planned by mutual agreement and is free of charge.
- The language of the service and of the outputs is Turkish.

11. Out of Scope

The application maintenance and support covers problems arising from the standard use of the software. The following work is outside the support scope:

- Work requested at the location of «CUSTOMER».
- Software, release and patch installations, and installation, removal and relocation activities, unless ordered separately.
- Installation, configuration, maintenance and support of third-party software, hardware, components and systems.
- System performance tuning, capacity management, security management and general system administration.
- Backup, restore, data archiving, data recovery and database administration.
- Data migration, system integration, customer-specific programming, script development or changes, and operational consulting.
- Product training.
- Work caused by unsupported products or versions, third-party interventions, customer or operator errors, misuse, or changes not approved by Komtaş.

Where an item above is in the service catalogue (Table 3), it can be requested as catalogue work and consumed from the MSU capacity. For other services considered out of scope, Komtaş informs «CUSTOMER» before starting the work; such work can be carried out at an additional fee with the approval of «CUSTOMER».

The following topics are also outside the scope of this proposal:

- Technology licence fees and vendor maintenance or subscription fees.
- Supply and operation of hardware, cloud infrastructure, operating systems, databases and network components.
- Application development and corrections in the source systems; retrospective data cleansing and data correction.
- Legal opinion and KVKK compliance audit; internal audit, external audit and regulatory application processes.
- New implementation projects (new modules, new platforms, migration), which are proposed as Service B.

12. Proposal Terms

12.1 General Terms

- All fees in this proposal are stated in Turkish lira and exclude VAT. Statutory taxes, duties and charges are not included in the fees.
- The proposal is valid until «proposal date + 1 month».
- The fees are valid on condition that the work starts by «price validity date». If the start moves beyond that date for any reason, the fees and pricing terms are reassessed by mutual agreement in the light of the economic and financial conditions at the time of the work.
- Technology licences are not part of this proposal; they are offered in a separate licence proposal («LICENCE PROPOSAL REF»), and the licence terms are set out there.
- The start dates of the consulting services are agreed with «CUSTOMER». The kick-off and closing meetings are held on site by mutual agreement. Further on-site meetings and work may be planned where the parties agree; on-site work takes place within «CITY». All other project activities and communication are carried out mainly online.
- Payment for the consulting service follows the deliverables and milestones stated in this proposal. Invoices are payable within «N» days of the invoice date.
- The service period is «N» months from the contract start date.
- Scope changes are managed through a written change request; no change is implemented before its impact analysis is approved.
- The parties keep confidential all information they access within the scope of the project. A separate non-disclosure agreement is signed where needed.
- The rights of use of the deliverables produced in the project belong to «CUSTOMER»; Komtaş retains its intellectual property rights in its methodology, templates and general know-how.
- This proposal forms an integral annex to the contract to be signed by the parties. In the event of a conflict between the contract and the proposal, the contract prevails.

- In the event of force majeure, the parties inform each other in writing and the impact on the schedule is reassessed by mutual agreement.

12.2 Proposal Contact Details

Questions on this proposal and its scope can be addressed to the contacts below.

Area of Responsibility	Full Name	Title	Contact
Commercial	«full name»	«title»	«e-mail / phone»
Technical	«full name»	«title»	«e-mail / phone»

12.3 Proposal Annexes

This proposal is submitted with the following annexes:

- ANNEX-1 — About Komtaş
- ANNEX-2 — Service Team and CVs

ANNEX-1 — About Komtaş

> *FILL NOTE — the figures in Table 10 and in the bullets below come from the proposals of 2026. Check them against the current corporate profile before sending.*

Komtaş is an independent information technology company that has specialised in enterprise data management in Türkiye since 1989. More than 35 years of focus on a single field has given it an end-to-end view that follows data from the moment it is created to the moment a decision is taken.

Indicator	Value
Founded	1989 — more than 35 years of continuous data-focused activity
Specialist staff	250+ data engineers, architects, consultants and analysts
Offices	Istanbul, Ankara, Izmir, Dubai
Strategic partnerships	10+ global technology vendors
Focus area	Data governance, data architecture, analytics, artificial intelligence and AI agent based solutions
Positioning	"From Data to Agents" — integrated capability from data to AI agents

Table 10 — Komtaş corporate profile.

Service Capabilities

The service portfolio of Komtaş covers the whole life cycle of a data initiative:

- **Data Governance and Data Management:** data governance maturity assessment, framework and organisation design, policy and process design, data catalogue, business glossary, data quality management, master data management, data privacy and classification.
- **Data Architecture and Engineering:** data warehouse and data lake architectures, lakehouse design, data integration and streaming architectures, cloud and on-premises modernisation.
- **Analytics and Artificial Intelligence:** enterprise reporting, advanced analytics, machine learning models, generative AI applications and AI governance.
- **Managed Services and Support:** P1 / P2 / P3 support for production systems, capacity and performance management, continuous improvement services.
- **Training and Capability Building:** product training, role-based data governance training, train-the-trainer programmes.

Position of Komtaş in Data Governance

The data governance approach of Komtaş is a consulting discipline that addresses strategy, organisation, process and technology together, independently of the positioning of any technology or product. Its methodological basis is the DAMA-DMBOK body of knowledge. The frameworks used assess the current state of the organisation not only in terms of data management practices but also in terms of organisational capability, process maturity, control mechanisms, enterprise architecture and information management.

This approach allows technology evaluation and selection to be driven by needs and capabilities rather than by products.

Technology is therefore not the aim of the data governance change but the enabler that allows the defined corporate goals to be reached: the consulting work designs the data governance capability of the organisation, informs the technology investment decision and puts the selected technology into use in line with the target model.

AI Governance Framework

Many data governance programmes today run alongside AI initiatives. The data sources of model inputs, whether they contain personal data, the traceability of model outputs and the chain of responsibility are natural extensions of the classic data governance questions. The Komtaş AI Governance Framework links data ownership, classification and quality rules to the model life cycle and brings the two areas under one governance structure. The framework designed for «CUSTOMER» is built to scale so that it can later include AI governance.

Why Komtaş

- **Focus:** Komtaş has worked only in the data field for more than 35 years, with more than 250 specialists and 4 offices.
- **Group-scale experience:** Komtaş has run multi-company data governance programmes end to end in large holding structures in Türkiye, covering several subsidiaries, and knows the issues specific to groups: subsidiary autonomy, different maturity levels, and the balance between a central standard and local flexibility.
- **Product-independent method:** The methodology is based on the DAMA-DMBOK and COBIT frameworks and is product-independent. The technology recommendation is therefore the result of objective criteria from the maturity assessment, not a decision made in advance.
- **Technology ecosystem:** Komtaş is a strategic partner of more than 10 global technology vendors. It can present a real set of alternatives in product selection and has implementation depth in the product selected.
- **AI-ready framework:** In line with the "From Data to Agents" approach, the data governance framework also covers the dimensions required by AI governance, so that the data governance foundation built today also serves later AI and AI agent initiatives.

References

In more than 35 years, Komtaş has delivered data projects for more than 500 corporate customers in finance, manufacturing, retail, telecommunications, energy, healthcare, the public sector and logistics. Reference projects comparable to the scope of this proposal are listed below. Reference calls with the customers concerned can be arranged on request.

FILL NOTE — list only references whose use has been approved for this proposal. Do not add contact persons without their consent.

Organisation	Scope of Work	Contact
