DATA GOVERNANCE PROGRAM — INFORMATION GATHERING FORM

Information needed to determine the service to be proposed, its scope and duration. Numerical answers may be given as approximate values. The SERVICE column shows which service the question is required for (A · Strategy and Framework Design, B · Technology Enablement, C · Managed

#	SECTION	SERVICE	QUESTION	ANSWER	ADDITIONAL NOTES
1	Current State and Expectations	A · B · C	Which data governance work exists in the organisation today (written policies and standards, defined roles (data owner, data steward), business glossary, data catalogue, data quality checks, etc.)? On which platforms or tools is this work carried out?		
2	Current State and Expectations	A · B · C	What need has started this work (an audit or KVKK finding, inconsistent reports, data without clear ownership, a new data platform, AI and advanced analytics initiatives, etc.)? Which decision is the work expected to support?		
3	Current State and Expectations	A · B · C	Which service or services are expected to be proposed: strategy and framework design, technology enablement, managed service? Are the services expected to be planned together or one after another?		
4	Current State and Expectations	A · B · C	What are the most frequently raised data issues today (the same concept defined differently across units, data without a clear owner, data quality issues, not knowing in which systems personal data is held, etc.)? In which business areas do they stand out?		
5	Organisation and Scope	A · B · C	Will the work cover a single company or group companies? In a group structure, which companies are in scope, and is company-level flexibility expected alongside a central standard?		
6	Organisation and Scope	A · B · C	Has a sponsor for the work been named in the organisation? Is there a data governance office, a committee or a unit responsible for data governance? Can a project coordinator be assigned for day-to-day coordination?		
7	Organisation and Scope	A · B · C	Which data domain or domains are expected to be taken up first (customer, product, finance, operations, etc.)? Which business units are expected to be in scope?		
8	Platform	A · B · C	Is the Informatica platform in use or planned? If in use, is it installed in the cloud (IDMC) or on premises (Axon, EDC, IDQ), and which version? What is the licence status (existing, to be purchased, or a separate licence proposal expected)?		
9	Strategy and Framework	A	Which business units are expected to be interviewed, and approximately how many? Can the existing policies, organisation chart, system inventory, process documents and existing glossary or catalogue outputs be shared at the start of the work?		
10	Strategy and Framework	A	In addition to the strategy work, is one or more of the following expected: requirements, RFI / RFP and POC support for selecting a data governance technology; process and data flow analysis with a digitalisation gap assessment; a data quality assessment on a sample dataset?		
11	Strategy and Framework	A	Has the data domain for the pilot been chosen? Can access to the platform environment, sample data and the related metadata be provided for the pilot?		
12	Technology Enablement	B	Which work is expected on the technology side: business glossary and data dictionary; data catalogue, lineage and sensitive data classification; data quality? Is a rollout of an installed platform to new domains, or a migration from an on-premises installation to IDMC, being considered?		
13	Technology Enablement	B	Which source systems are to have their metadata catalogued (database, ETL and reporting systems; product and version)? What is the approximate number of tables and reports?		
14	Technology Enablement	B	On which system will the data quality work be carried out? What are the total number of records (active and inactive), the number of data domains and business terms in scope and the number of data quality rules expected to be defined?		
15	Technology Enablement	B	On which system and for which data types is sensitive and personal data tagging expected (national ID number, tax ID, name, e-mail, phone, address, etc.)? Is there a data classification policy or a personal data inventory under KVKK?		

#	SECTION	SERVICE	QUESTION	ANSWER	ADDITIONAL NOTES
16	Technology Enablement	B	Can the servers needed for installation be provided (a Secure Agent server for IDMC; Axon, EDC and IDQ servers for an on-premises installation)? Through which service is user authentication done (Azure AD / Microsoft Entra ID with SAML, LDAP or other)? Are the development, test and production environments separate?		
17	Technology Enablement	B	Is platform training expected; is digital content or instructor-led classroom training preferred, and approximately how many people will attend? Is support expected for a period after go-live?		
18	Managed Service	C	Is a demand-based managed service after go-live being considered? Is the platform live today; is there an expectation of the monthly workload and the service period (e.g. 12 months)?		
19	Managed Service	C	Which work is mainly expected in the managed service (data quality rules, scorecards and dashboards, issue and root cause analysis; glossary terms, metadata, lineage, workflows and authorisation)? Do weekday support hours of 08:00–17:00 and 7×24 support for critical issues meet the expectation?		
20	Ways of Working and Procurement	A · B · C	Can the work be carried out remotely, on site or in a mixed form? If on-site work is needed, in which city?		
21	Ways of Working and Procurement	A · B · C	Is there an RFP or specification? How does the procurement process work; which is preferred, a fixed fee or a time and materials model?		
22	Ways of Working and Procurement	A · B · C	Is there a target date or a timing constraint for the decision and the start (budget period, audit calendar, calendar year end, etc.)?		

INFORMATION NOTE

Purpose of the form	This form has been prepared to collect the information needed to select the service to be proposed under the Data Governance Program and to determine the scope, duration and team composition of the work.
Three services	A — Strategy and Framework Design: product-independent; data governance maturity assessment in ten categories, awareness sessions, strategy, framework and organisation model, policies, processes and RACI, glossary, metadata and data quality templates, a pilot on the platform in one domain, and a roadmap. B — Technology Enablement: configuring and deploying the data governance platform in modules (business glossary and data dictionary; data catalogue, lineage and classification; data quality), workshops, and optional training and post-go-live support. A rollout of an installed platform to new domains and a migration from an on-premises installation to the cloud are also proposed under this service. C — Managed Service: a demand-based data quality and data governance service with a monthly service capacity after go-live, together with technical support.
Which question for which service	The SERVICE column shows which service the question is required for. If the service has not yet been decided, answering all questions is recommended. For A: 1–11, 20–22 For B: 1–8, 12–17, 20–22 For C: 1–8, 18–22
Nature of the answers	Numerical answers may be given as approximate values; exact figures are not required. Questions whose answer is not known may be left blank.
Current state question	Question 1 sets the starting point of the work. The policies, roles, glossary, catalogue and data quality work in place today show which service to start with and which outputs can be reused. A short list is enough.
Platform and licence	Question 8 determines on which platform and in which form of installation (cloud or on premises) the technology work is carried out. Technology licences are not included in the proposal for this work; if needed, they are offered in a separate licence proposal.
System access	A: The work runs on interviews, workshops and shared documents. For the pilot, access to the platform environment, sample data and metadata is provided with the organisation's approval. B: Access to the metadata of the source systems, the installation servers and user authorisations are defined in the project plan with the organisation's approval. C: The platform and source system access needed for the requests is provided by the organisation.
Personal data question	Question 15 is asked to determine the scope of sensitive and personal data tagging. Part of the answer may sit with units outside technology (legal, compliance, data protection officer).
Questions left blank	Each unanswered topic is stated in the proposal as an assumption. If the assumption does not hold, the scope and duration are reassessed.
Not asked in this form	Maturity levels, organisation model and role details, the content of policies and processes, data quality rule design and the methodology are not asked in this form. Komtaş proposes them based on the answers, presents them in the proposal, and they are finalised together in the analysis stage of the work.
Confidentiality	The information shared is used only for preparing the proposal and is not shared with third parties.
