DATA MESH READINESS ASSESSMENT

Data Mesh Readiness Check and Data Mesh Readiness Assessment — blueprint

Internal reference: services, method, sizing and proposal set. A decision per domain — no single maturity grade for the organisation.

1 **Where it sits**
Mesh in the data and AI value proposition; readiness versus platform assessment; seven recurring data mesh patterns.
p. 2 – 6

2 **Two services**
Readiness Check and Readiness Assessment; five gate items mapped to the ten dimensions.
p. 7 – 11

3 **Method**
Ten dimensions, ladder, evidence, phases, prerequisite gate, domain readiness matrix, result format, routing.
p. 12 – 22

4 **Komtaş side**
Roles, duration, effort and sizing, deliverables and proposal set, limits, package files and open items.
p. 23 – 28

SECTION 1

Where It Sits

Where data mesh sits in the data and AI value proposition, how readiness differs from a platform assessment, and the patterns the services are built to show.

One question, four layers p. 3

AI value proposition in detail p. 4

Readiness assessment, not a platform assessment p. 5

Seven recurring data mesh patterns p. 6

Where It Sits — One Question, Four Layers

KOMTAS

An agent's answer is built from the layers below it. Data mesh changes who owns and publishes the bottom layer; these services check whether that can work.

01 · WHY IT MATTERS

"How many active customers do we have across retail and corporate?"

"1.24 million; 18,000 hold both relationships."
joined from two domain data products, each with an owner and a contract

THESE SERVICES

Action 360
Intelligent Work Experience

Where the question is asked and the answer lands: Teams, Slack, portal, API.

Agent 360
Governed Digital Workforce

Turns the question into a query and acts on the result.

Context 360
Enterprise Context

Says what "active customer" means across domains: ontology, semantic layer.

Data / Analytic 360
Trusted Data Foundation

Holds and serves the data. Under data mesh, each domain owns and publishes its part.

The answer travels back up — it is only as good as the domains below

WHERE AN UNREADY DOMAIN SHOWS UP IN THE ANSWER

Customer data has two owners

Both domains publish a count; neither is accountable.

D1 · Ownership

Published, then not maintained

No engineer in the domain; the product goes stale.

D6 · Capacity

Each domain built its own pipeline

No shared publishing path; four formats reach the agent.

D3 · Self-serve platform

Keys do not join across domains

The answer cannot combine the two products.

D5 · Interoperability

Where This Assessment Sits — AI Value Proposition

KOMTAS

Data mesh is not a layer. It is an operating model for how the Data / Analytic 360 layer is organised and owned.

DATA MESH — who runs these components, with what responsibility and under which common rules

Data mesh adds no new technology layer. It moves ownership of the same components from the centre to domains; the assessment checks whether that move can be made.

LOGIC OF THE ASSESSMENT

Mesh is an operating model, not an architecture

What is checked is not technology but whether responsibility, capacity and common rules exist in the domains.

The platform is a prerequisite

Without a self-serve platform each domain builds its own infrastructure; the result is scattered silos, not a mesh.

Relation to Context 360

Interoperability between domains needs common definitions; semantic layer and master data feed directly into it.

A Readiness Assessment, Not a Platform Assessment

KOMTAS

Both use the same family spine; their questions, evidence and outputs differ

	PLATFORM ASSESSMENT	READINESS ASSESSMENT
What is assessed	A system that is built and running	Prerequisites of an operating model not yet in place
Core question	At what maturity does this system run?	Which domain can move to this model, and if not, why?
Main evidence	Logs, configuration, platform measurement	Org chart, role definitions, decision records, interviews
Main output	Gap per dimension and an improvement roadmap	A start decision per domain and a prerequisite list
Result	Current and target level per dimension	Ready to start / conditional / not ready per domain — no score
Extra component	—	Prerequisite gate: no start until met, whatever the levels
Services	Lakehouse, DWH, BI Assessment	A Readiness Check 1 – 2 weeks · B Readiness Assessment 3 – 4 weeks
Main audience	Platform owner, data team manager	CDO, domain managers, organisation side

THE SUBJECT OF THIS ASSESSMENT IS THE ORGANISATION

Data mesh almost never fails because of technology. Organisations can build the platform; what they struggle with is finding the person in a domain who will take on data ownership, and giving that person capacity. The assessment therefore mainly assesses the organisation.

THE SPINE DOES NOT CHANGE

The evidence model, the five-level ladder, the P0 – P4 phases, the band rule and the package structure are the same across the assessment family. A platform assessment and this readiness assessment taken by the same organisation therefore stay comparable.

Seven Recurring Patterns in Data Mesh Initiatives

KOMTAS

Each is measurable; the assessment is not done to spot them but to show them with evidence

Mesh in name, central in practice

Teams are renamed “domains”, but the central data team still does the work. Only the labels have changed.

Measured: who actually built the products published in a domain's name

Domain defined, no owner

Domain boundaries are drawn, but no domain has a named person who takes on data ownership.

Measured: share of domains with a named data product owner and written authority

No platform, mesh assumed

Each domain builds its own pipeline with its own tools. The result is not federation but lost standards and duplicate infrastructure.

Measured: share of products published through a common self-serve platform

Data product equals table

A shared table is called a “data product”. There is no contract, SLA, version or quality commitment; consumers do not know what to rely on.

Measured: share of products with a defined contract, SLA and owner

Federated governance read as no governance

Central standards are removed and no common rule replaces them. Each domain produces its own definitions and data no longer joins.

Measured: number of common cross-domain standards and compliance rate

Responsibility handed over, capacity not

Domains are expected to own data products, but have no data engineer. The responsibility stays on paper.

Measured: data engineering FTE per domain and current workload

Consumer not considered

Products are published, but who uses them, how they are found and what freshness to expect are not defined.

Measured: consumers per product, discoverability and whether an SLA is defined

ALL SEVEN HAVE THE SAME ROOT

None is a tool or architecture problem. All seven arise where responsibility is handed over but the capacity, common rule and consumer definition the hand-over needs are not written down. A mesh starts with writing these down, not with technology.

SECTION 2

Two Services

Data Mesh Readiness Check and Data Mesh Readiness Assessment — what each covers, how long it takes, and how the five gate items map to the ten dimensions.

Which one fits p. 8

A · Data Mesh Readiness Check p. 9

B · Data Mesh Readiness Assessment p. 10

Gate items mapped to the ten dimensions p. 11

Two Services — Which One Fits

KOMTAS

Data Mesh Readiness Check and Data Mesh Readiness Assessment. Each can be taken on its own; neither is a mandatory step before the other.

02 · TWO SERVICES

p. 9

A Data Mesh Readiness Check

Prerequisite check per domain · documents and interviews

Focus	Five prerequisites, checked per domain
Scope	5 gate items for each domain in scope
Result	Met / partly met / not met; indicative result per domain
Access	None · documents and interviews only
Effort	Komtaş 6 · 9 · 12 pd · customer 3 · 4 · 5 days
Evidence	Statement · Document · Observation · Measurement
Weeks	S 1 · M 1.5 · L 2

p. 10

B Data Mesh Readiness Assessment

Decision per domain · pilot and transition plan

Focus	Readiness matrix, pilot domain and transition plan
Scope	10 dimensions per domain, current and target
Result	Ladder per domain, gate, readiness matrix with earliest start
Access	None · documents, interviews, observation; catalogue counts if shared
Effort	Komtaş 22 · 28 · 34 pd · customer 6 · 8 · 10 days
Evidence	Statement · Document · Observation · Measurement
Weeks	S 3 · M 3.5 · L 4

WHICH ONE FITS · THE QUESTION ON THE TABLE DECIDES

Is a quick, documented view needed of whether named domains meet the five prerequisites? → A

Is a decision per domain needed — with a pilot domain, a closing plan and a transition plan? → B

A · Data Mesh Readiness Check

Prerequisite check per domain · documents and interviews.

KOMTAS

02 · TWO SERVICES · A

A

Data Mesh Readiness Check

Five prerequisites, checked per domain

WEEKS S · M · L	KOMTAŞ EFFORT person-days	CUSTOMER days
1 · 1.5 · 2	6 · 9 · 12	3 · 4 · 5

WHAT IS CHECKED · 5 GATE ITEMS PER DOMAIN

1 Defined domain boundary

Which data belongs to the domain, and how overlaps are resolved, is written down

D1

2 Named data product owner

A person in the domain, formally assigned, who can decide scope and acceptance

D1 · D2

3 In-domain data engineering capacity

At least one dedicated person in the domain who can build and run the product

D6

4 Publishing path on a self-serve platform

A technical path for the domain to publish without raising work for the central team

D3

5 Commitment to common rules

A written commitment by the domain to follow federated governance standards

D4 · D5

Σ Per domain in scope

Each item is checked separately for every domain named in the proposal; there is no organisation-wide answer.

«DOMAINS»

HOW IT IS ASSESSED

Four statuses per gate item and domain

- Met
- Partly met
- Not met
- Not assessed

Indicative result per domain — ready to start, conditional or not ready — marked statement-based.

WHAT YOU GET

- Gate status per domain, item by item
- Indicative result per domain, marked statement-based
- Key risks, each with its evidence
- Recommended next step, incl. whether B is worth taking

No ladder, no score, no transition plan. No system access; evidence is documents and interviews.

B · Data Mesh Readiness Assessment

Decision per domain · pilot and transition plan.

KOMTAS

02 · TWO SERVICES · B

B

Data Mesh Readiness Assessment

Readiness matrix, pilot domain and transition plan

WEEKS S · M · L	KOMTAŞ EFFORT person-days	CUSTOMER days
3 · 3.5 · 4	22 · 28 · 34	6 · 8 · 10

WHAT IS ASSESSED · 10 DIMENSIONS PER DOMAIN

D1 Domain boundaries & ownership
Written boundaries, owner, overlaps

D2 Data product definition & quality
Contract, SLA, versioning, quality

D3 Self-serve platform capability
Publishing without the central team

D4 Federated governance
Who sets common rules, how enforced

D5 Interoperability & standards
Common definitions, keys, schemas

D6 In-domain engineering capacity
People, skills, workload, continuity

D7 Discoverability & catalogue
Metadata, lineage, access requests

D8 Consumer experience & SLA
Consumers, freshness, support

D9 Central team role & transition
New role, hand-over order, rollback

D10 Organisation, incentives & funding
Budget, incentives, sponsor support

HOW IT IS ASSESSED

Current and target level per domain

1	2	3	4	5

current

target

Then the gate per domain and the readiness matrix: ready to start, conditional or not ready, with earliest start.

WHAT YOU GET

- Ten dimensions per domain, current and target level
- Gate and readiness matrix with earliest start date
- Pilot domain, closing plan and transition plan
- Routing to follow-on work

No weighted score. Catalogue and platform counts are used as measurement where the customer shares them.

Gate Items Mapped to the Ten Dimensions

KOMTAS

A checks the five gate items, which touch six of the ten dimensions. B places all ten and runs the same gate with deeper evidence, so A's result carries into B.

DIMENSION	A · GATE ITEM	EVIDENCE IN A · DOCUMENTS, INTERVIEWS	EVIDENCE IN B · DEEPER, PER DOMAIN
D1 **Domain boundaries & ownership**	1 · 2 Boundary · product owner	Domain definition, decision record, interviews	Overlap cases traced; named owners counted per domain
D2 **Data product definition & quality**	2 Product owner	Assignment letter, role description	Sample of existing products against contract, SLA, quality
D3 **Self-serve platform capability**	4 Publishing path	Platform documentation, statement of the path	One publication observed end to end; platform counts if shared
D4 **Federated governance**	5 Common rules	Standards document and domain sign-off	Rule owner, enforcement and compliance records
D5 **Interoperability & standards**	5 Common rules	Common definitions and key standard, if written	Cross-domain join traced on one product pair
D6 **In-domain engineering capacity**	3 Engineering capacity	Org chart, role assignments, manager interview	FTE per domain, skills, workload, continuity
D7 **Discoverability & catalogue**	*Not checked in A*	—	Catalogue entries, metadata, lineage; access-request times if shared
D8 **Consumer experience & SLA**	*Not checked in A*	—	Consumer interviews; freshness and availability commitments
D9 **Central team role & transition**	*Not checked in A*	—	Central team interviews; hand-over order and rollback condition
D10 **Organisation, incentives & funding**	*Not checked in A*	—	Budget model, incentives, career path; sponsor interview
EVIDENCE DEPTH		Documents and interviews — no system access	Plus end-to-end observation and, where shared, catalogue and platform counts
RESULT FORMAT		Status per gate item and domain; indicative result	Level per dimension and domain; gate; readiness matrix with earliest start

A covers the five gate items for every domain named in «DOMAINS». A dimension left out of B's scope is named in the proposal as «OUT-OF-SCOPE DIMENSION» (4b).

SECTION 3

Method

The ten dimensions, the evidence rules, the phases, the prerequisite gate, the domain readiness matrix and how each service expresses its result.

Ten dimensions · maturity ladder · evidence model — p. 13 – 15

How it is run · phase rules — p. 16 – 17

Prerequisite gate · domain readiness matrix — p. 18 – 19

Result format · report contents · routing — p. 20 – 22

Ten Dimensions

KOMTAS

The checklist behind B. Each dimension is placed per domain on the ladder; six of them carry the gate items that A checks. There are no weights and no score.

	DIMENSION	TOPICS COVERED
D1	**Domain boundaries & ownership**	Domain definition, written boundaries, who owns the data, how overlaps are resolved
D2	**Data product definition & quality**	Product contract, SLA, versioning, quality commitment, acceptance criteria, documentation
D3	**Self-serve platform capability**	Whether a domain can publish without the central team; templates, automation, environment provisioning
D4	**Federated governance**	Who sets the common rules, how they are applied and how compliance is tracked
D5	**Interoperability & standards**	Common definitions, keys, schema standard, joining data across domains
D6	**In-domain engineering capacity**	People assigned per domain, skill level, current workload and continuity
D7	**Discoverability & catalogue**	Whether products can be found; metadata, lineage, access-request flow
D8	**Consumer experience & SLA**	Consumer definition, freshness and availability commitment, feedback and support
D9	**Central team role & transition**	New role of the central team, hand-over plan, transition order and rollback condition
D10	**Organisation, incentives & funding**	Budget model, incentive structure, career path, continuity of senior management support

WHY THE FIRST THREE COME FIRST

Without domain ownership, a data product definition and a self-serve platform, a domain cannot publish: without an owner nobody decides, without a product definition consumers do not trust the product, and without a platform each domain builds its own infrastructure.

Five-Level Maturity Ladder

KOMTAS

Used in the Readiness Assessment (B): each dimension is placed on this ladder per domain. A uses no ladder. Without evidence, one level lower is recorded.

LEVEL 1
Ad hoc

No rule; result depends on people

- No written standard; practice varies by team
- Problems are solved by improvisation
- Not measured; state unknown

Exit: practice written down

LEVEL 2
Repeatable

Done the same way, but not written

- Experienced people follow the same method
- A newcomer cannot repeat the result
- Measurement, if any, is irregular

Exit: rule documented and owned

LEVEL 3
Defined

Rule written and applied

- Standard is documented and known
- Deviation from practice is noticed
- Regular measurement, no thresholds

Exit: thresholds set, deviation measured

LEVEL 4
Managed

Measured, with thresholds; deviation visible

- Thresholds defined and monitored
- Deviation detected automatically
- Root cause analysis is done

Exit: correction automated

LEVEL 5
Optimised

Deviation corrected automatically; continuous improvement

- Correction largely automated
- Thresholds updated from data
- Improvement shown by measurement

THE LADDER IS READ PER DOMAIN

A single level for the organisation means little: in the same organisation one domain can be at level three while another is at level one. Dimensions set centrally (for example D4 or D9) are recorded once; ownership and capacity are placed separately for each domain.

THE TARGET LEVEL IS THE ORGANISATION'S DECISION

To start a first pilot domain, level three is enough in most dimensions. Level five only makes sense where many domains already publish products in production; targeting it early only adds cost.

Evidence Model

KOMTAS

Each finding is tied to an evidence type and shown in the report. If the evidence type is hidden, the report cannot be read.

MEASUREMENT
Measurement

A number from systems — B only, if shared

· Products in the catalogue, platform usage, access-request times, SLA compliance records

Highest confidence

DOCUMENT
Document

An existing document or record

· Domain definition, product contract, standard, role assignment, org chart, decision record

High confidence · currency checked

OBSERVATION
Observation

A process followed end to end — B

· One product from idea to publication, one access request, one standards breach being handled

Medium confidence · one-off observation

STATEMENT
Statement

What people say

· Domain manager and team interviews, central team statements, workshop outputs

Low confidence · cannot confirm a level alone

THREE-STATE EVIDENCE SCALE

Evidence provided
Level or gate item shown by a document or measurement

Partial evidence
Evidence exists, but its scope is narrow or its currency unclear

Evidence could not be produced
No document, missing records, or not yet in practice

THE MOST FREQUENTLY CHECKED STATEMENT IS OWNERSHIP

"Our domains own their data" is heard in almost every organisation. It is checked with one question: which person in that domain is named in which document, and which decision can that person take? If no named person can be shown, the item is marked statement-based.

NOT YET IN PRACTICE IS A FINDING

In a readiness assessment many dimensions have no practice yet to measure. That is not a gap in the evidence but the finding itself: where a written plan exists but is not applied, the level follows the practice, not the plan.

How It Is Run — One Method, Two Depths

KOMTAS

The same evidence types, gate and phases are used in both services. The service sets how deep the evidence goes and how long each phase takes.

03 · HOW IT IS RUN

FOUR KINDS OF EVIDENCE

Measurement
B

A count from the catalogue or platform, if the customer shares it

Document
A · B

Org chart, role assignment, domain definition, standard

Observation
B

One product followed from idea to publication

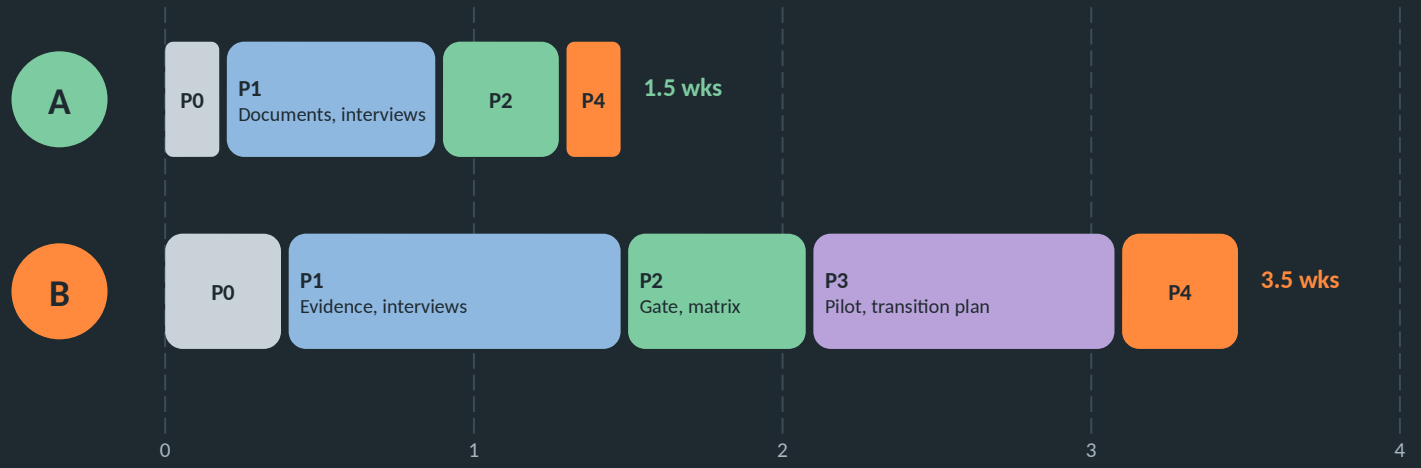

Statement
A · B

What a manager or team says — recorded as a claim

A gate item is “met” only where a document or an observation supports it. In A, results rest mostly on statements and are marked as such.

Domain count sets the calendar. Every domain needs manager, owner and consumer interviews; adding people does not shorten it.

PHASES BY SERVICE · M BAND, IN WEEKS

P0 scope · P1 evidence and interviews · P2 gate (A) or placement, gate, matrix (B) · P3 pilot and transition plan (B only) · P4 read-out

WHO DOES THE WORK

A — Assessment lead · organisation consultant · data architect

B — As A, plus data product and governance consultants · platform specialist, change on call

EVIDENCE BY SERVICE

A — No system access. Org chart, role assignments, domain definitions and standards, plus interviews per domain.

B — No access model. Adds end-to-end observation and, where the customer shares them, catalogue and platform counts.

Process — P0 to P4

KOMTAS

Five phases, each with a written rule. A runs P0, P1, P2 and P4; P3 is B only. Phase length changes with the band, phase content does not.

P0 · Scope
A 1 day · B 2 days

- Domains in scope and their boundaries named («DOMAINS»)
- Candidate data products and consumers named
- Interview calendar set up per domain
- B: target level per dimension agreed in writing

PHASE RULE
Interviews do not start before the domains in scope are agreed in writing

P1 · Evidence and interviews
A 3–4 days · B 1–1.5 wks

- Domain manager, data owner and consumer interviews
- Org chart, role assignments, domain definitions, standards
- B: existing products, catalogue entries, platform counts if shared
- B: one product followed from idea to publication

PHASE RULE
Each item is typed as measurement · document · observation · statement and the type is recorded

P2 · Gate and placement
A 2 days · B 3 days

- Gate run per domain: met, partly met, not met, not assessed
- A: indicative result per domain and report
- B: dimensions placed on the ladder per domain
- B: readiness matrix with earliest start

PHASE RULE
The gate is run for each domain separately; the organisation gets no single readiness grade

P3 · Pilot and transition plan
B only · 1 week

- Pilot domain chosen, with rationale
- Missing prerequisites tied to owner, date and dependency
- New role of the central team and hand-over order
- Rollback condition: when the model is stopped

PHASE RULE
Every recommendation is tied to a finding; one without a finding is removed

P4 · Validation and release
A 1 day · B 2 days

- Factual review with domain managers and the central team
- Objections recorded next to the finding
- Report released with scope and evidence gaps
- Baseline retained for the next assessment

PHASE RULE
An objection is not resolved away; it stays next to the finding

THE NUMBER OF DOMAINS DRIVES THE SCHEDULE

P1 grows linearly with the domains in scope; each domain needs at least one manager, one data owner and one consumer interview. Narrowing scope by domain is therefore a far stronger schedule lever than dropping dimensions.

THE PILOT DOMAIN IS CHOSEN IN P3 (B)

The assessment does not propose moving the whole organisation at once. P3 names one or two pilot domains that meet the most prerequisites and the product to start with. The rollback condition is written in the same document.

Prerequisite Gate

KOMTAS

Five items, run per domain in both services. Independent of the ladder: an unmet prerequisite cannot be offset by high levels elsewhere.

	PREREQUISITE	WHAT IT MEANS	HOW IT IS VERIFIED	IF NOT MET
1	**Defined domain boundary**	Which data belongs to the domain, and how overlaps are resolved, is written down	Domain definition document or decision record	The ownership debate repeats for every product; the model stalls
2	**Named data product owner**	A person in the domain, formally assigned, who can decide scope and acceptance	Assignment letter or role description	Responsibility stays on paper; the central team keeps doing the work
3	**In-domain data engineering capacity**	At least one dedicated person in the domain who can build and run the product	Organisation record and current workload	The product is published but not maintained; it returns to the centre within months
4	**Publishing path on a self-serve platform**	A technical path for the domain to publish without raising work for the central team	Platform documentation or one observed publication	Each domain builds its own infrastructure; the result is scattered silos, not a mesh
5	**Commitment to common rules**	A written commitment by the domain to follow federated governance standards	Standards document and domain sign-off	Data does not join across domains; the core promise of the mesh is not met

FOUR STATUSES PER ITEM AND DOMAIN

Each item is recorded as met, partly met, not met or not assessed. In A the status rests on documents and interviews and the result is indicative; in B it is verified with evidence and feeds the readiness matrix. “Not assessed” is never counted as met.

ITEM THREE IS THE ONE MOST OFTEN SKIPPED

Organisations rarely struggle to draw a boundary or name an owner; what they struggle with is giving the domain a dedicated data engineer. A product handed to a domain without capacity goes unmaintained within months and returns to the central team.

Domain Readiness Matrix

KOMTAS

The main output of B: which domain can start when, and what is missing. Illustrative example; A produces the same rows as an indicative, statement-based view.

DOMAIN	BOUNDARY	OWNER	CAPACITY	PLATFORM	RULES	RESULT	EARLIEST START
Sales	Met	Met	Met	Met	Met	Ready to start	Q1 · pilot
Customer Service	Met	Met	Partly	Met	Partly	Conditional	Q2 · rules, capacity
Finance	Met	Met	Not met	Partly	Met	Conditional	Q3 · capacity
Supply Chain	Partly	Not met	Not met	Not met	Not assessed	Not ready	Re-check in 12 months
Human Resources	Met	Partly	Not assessed	Met	Met	Conditional	After owner assigned

THREE RESULTS

READY TO START

All five prerequisites are met

- Pilot product and acceptance criterion can be written
- A start date can be given
- Hand-over scope and order are set

CONDITIONAL

Prerequisites can be met but are not met yet

- Each missing item gets an owner and a date
- Usually waits on capacity or platform
- Start date firms up as dates close

NOT READY

A prerequisite cannot be met in a foreseeable time

- The gap is mostly capacity or platform
- Domain deferred; data stays with the central team
- Platform work becomes a separate engagement

NO DOMAIN MAY COME OUT READY — THAT IS ALSO A RESULT

If the whole matrix is “conditional” or “not ready”, the result is that the organisation cannot move to data mesh today. The report then recommends building the prerequisites instead: usually the self-serve platform first, then capacity, and organisation change last.

Result Format by Service

KOMTAS

How a result is expressed differs by service. Neither service gives the organisation a single maturity grade or score.

03 · METHOD · RESULT FORMAT

A Status per gate item and domain

Met	A document or record shows the item is in place for this domain.
Partly met	In place in part, or stated but not yet written down.
Not met	Missing, with no owner or date to close it.
Not assessed	No document or interview available; never counted as met.

Indicative result per domain — ready to start, conditional or not ready — marked statement-based. No ladder, no score, no transition plan.

B A decision per domain

Level	Each dimension placed on the five-level ladder per domain, current and target.
Gate	The five items verified with evidence for each domain.
Matrix	Ready to start, conditional or not ready, with the earliest start date.
Plan	Pilot domain, closing plan with owner, date and dependency, transition plan.

No weighted score. The report opens with a decision sentence: “domain X can start on date Y; domain Z cannot start until …”.

Report Contents by Service

KOMTAS

Neither report is a maturity grade. A gives an indicative view per domain; B gives a start decision per domain and the plans behind it.

A · READINESS CHECK REPORT

- Gate status per item and domain
- Indicative result per domain, statement-based
- Key risks with their evidence type
- Recommended next step
- Evidence inventory, reusable in B

B · READINESS ASSESSMENT REPORT

- Readiness matrix with three results and earliest start
- Pilot domain recommendation and rationale
- Unmet prerequisites with owner, date, dependency
- Level per dimension and domain, with evidence type
- Transition plan and routing to follow-on work

IN NEITHER REPORT

- A single readiness grade or weighted score
- Moving the whole organisation at once
- Comparison with other organisations
- Product or technology recommendation
- Domain boundaries drawn by Komtaş — the organisation decides

THE REPORT OPENS WITH A DECISION

Not “your mesh maturity is at level n”, but “domain X can start on date Y; domain Z cannot start until … is closed”.
The whole executive summary should reduce to these two sentences. In A the same sentence is marked indicative.

THE MOST COMMON FINDING IS ORGANISATIONAL

Many assessments show that the obstacle sits in capacity and incentives, not in platform or architecture: the domain accepts responsibility but cannot assign people. This is not a technology finding and cannot be solved with technology.

DATA PRODUCT QUALITY IS INSIDE THIS WORK

Assessing data products for contract, SLA, versioning and quality is not a separate service but dimension D2 of B.
Where products exist, a sample is assessed against these criteria and findings are reported per product.

Routing — Where Findings Lead

Each route follows from a finding and its evidence. Routing is a consequence of the result, not a sales proposal.

03 · METHOD · ROUTING

IF THE FINDING IS ...	... IT LEADS TO
One or more domains ready to start Gate met; matrix gives a start date	**Pilot domain delivery · data product delivery**
Self-serve publishing path weak Gate item 4 · D3	**Lakehouse / DWH Assessment · platform build (Data Modernization)**
Common definitions and keys weak Gate item 5 · D5	**Ontology / semantic layer**
Catalogue, metadata or common rules weak D4 · D7	**Governance programme**
Consumption side unclear D8	**BI Assessment**
Owner or capacity missing Gate items 2 – 3 · D6 · D10	**Organisation's own decision; re-check after the closing plan**

NO SEPARATE DATA PRODUCT ASSESSMENT

By family decision K7, data product assessment is not sold on its own. Its content is dimension D2 of B, and phase 0 of a future data product delivery service. Internal note only.

ROUTES ARE PROPOSED SEPARATELY

This work does not build a platform, develop products or select technology. Each follow-on is scoped and priced in its own proposal.

When no domain is ready, the route is the prerequisites. Usually the self-serve platform first, then capacity, and organisation change last.

SECTION 4

Komtaş Side

Roles, duration, effort and sizing, deliverables and the proposal set, limits, package files and open items.

Competencies and roles p. 24

Duration, effort and sizing p. 25

Deliverables and proposal set p. 26

Limits of the assessment p. 27

Package files and open items p. 28

Competencies and Roles

KOMTAS

Which role is active in which phase, including customer participation. In A, Komtaş works with the assessment lead, the organisation consultant and the data architect; roles marked “B” join in B only.

ROLE	RESPONSIBILITY	PARTY	ACTIVE PHASES
Assessment Lead	Method, scope, prerequisite gate and report	**Komtaş**	P0 – P4
Data Architect	Publishing path and common-rule items; interoperability, hand-over model	**Komtaş**	A P1 – P4 · B P0 – P4
Data Product Consultant	Product contract, SLA, quality criteria and consumer side	**Komtaş**	P1 – P3 · B
Governance Consultant	Federated governance, standards, catalogue and metadata	**Komtaş**	P1 – P3 · B
Platform Specialist	Self-serve capabilities, automation and environment provisioning	**Komtaş**	P1 – P2 · B
Organisation Consultant	Domain boundary, ownership and capacity items; role design, incentives, funding	**Komtaş**	P0 – P4
Change Management Consultant	Transition plan, adoption and training capacity	**Komtaş**	P2 – P3 · B
Project Sponsor	Decisions, opening access to domain managers	**Customer**	P0, phase transitions
Domain Managers	Domain boundary, ownership and capacity decisions	**Customer**	P0 – P2
Data Product Owners	Existing products, consumers and quality commitments	**Customer**	P1
Central Data Team	Current operation, platform capabilities, work that can be handed over	**Customer**	P1 – P3
Platform / IT	Infrastructure, environment provisioning and publishing path	**Customer**	P1
HR / Organisation	Role definitions, headcount and incentive structure	**Customer**	P1
Consumer Representatives	Expectations, freshness needs and current problems	**Customer**	P1

NO ASSESSMENT WITHOUT DOMAIN MANAGERS

Ownership and capacity cannot be assessed by talking only to the central data team. The central team often believes the domains are ready; the domain manager says no headcount was given. The value of the assessment lies in showing this gap with evidence.

Duration, Effort and Sizing

KOMTAS

Indicative band values. The band is set from the short form; dates are fixed at kick-off, once interview calendars are known.

SERVICE	SMALL	MEDIUM	LARGE
A · Data Mesh Readiness Check 5 gate items per domain · documents, interviews	1 week · 6 pd · 3 days	1.5 weeks · 9 pd · 4 days	2 weeks · 12 pd · 5 days
B · Data Mesh Readiness Assessment 10 dimensions per domain · gate · matrix · plans	3 weeks · 22 pd · 6 days	3.5 weeks · 28 pd · 8 days	4 weeks · 34 pd · 10 days

Cell format: duration · Komtaş person-days · customer days. Customer effort is the highest in the assessment family and grows with the number of domains: each domain needs manager, owner and consumer interviews.

SIZING DRIVERS

DRIVER	SMALL	MEDIUM	LARGE	USED IN
Domains in scope	≤ 3	4 – 8	> 8	A · B
People to interview	≤ 12	12 – 30	> 30	A · B
Existing data products	0 – 2	3 – 15	> 15	A · B
Central data team size	≤ 5	5 – 20	> 20	A · B
Data platforms in scope	1	2 – 3	> 3	A · B
Legal entities or locations	1	2 – 3	> 3	A · B
Governance maturity	Written	Partial	None	B
Documentation maturity	Written	Partial	None	B
Access to senior management calendar	Easy	Medium	Hard	B
Previous assessment	Yes	Partial	No	B

BAND RULE · the highest band that at least three drivers fall into — A uses its 6 drivers, B all 10. One large driver alone does not set the band.

Deliverables and Proposal Set per Service

KOMTAS

Which documents each service produces, which package files are used to price it, who writes which proposal section, and where it usually leads.

SERVICE	DELIVERABLES	INPUT FORM · PROPOSAL TEMPLATE	USUAL NEXT STEP
A · Data Mesh Readiness Check 1 · 1.5 · 2 weeks	· Gate status per item and domain · Indicative result per domain, statement-based · Key risks with their evidence · Recommended next step; evidence inventory	3a-readiness-check-girdi-formu 4a-readiness-check-teklif-sablonu Question set 5: questions marked A Set 6, Proposal Set: S1 – S7	→ B · Readiness Assessment → Pilot domain delivery
B · Data Mesh Readiness Assessment 3 · 3.5 · 4 weeks	· Ten dimensions per domain, current and target, with evidence · Gate per domain; readiness matrix with earliest start · Pilot domain recommendation with rationale · Prerequisite closing plan: owner, date, dependency · Transition plan and routing to follow-on work	3b-readiness-assessment-girdi-formu 4b-readiness-assessment-teklif-sablonu Question set 5: questions marked B Set 6, Proposal Set: S1 – S5, S8 – S14	→ Pilot domain delivery → Data product delivery → Platform build (Data Modernization) → Ontology / semantic layer → Governance programme

PROPOSAL STRUCTURE · WHO WRITES WHICH SECTION

Executive summary	Scope, domains	Method	Deliverables	Assumptions	Schedule, person-days	Team	Price	Terms
SAT	SAT	SAT · blueprint	SAT	SAT	Delivery	Delivery	Sales	Fixed

EVIDENCE IS REUSED, NOT BILLED TWICE

If B follows A, A's evidence inventory and gate results are reused. The proposal states this in writing and reduces P1 accordingly. A is not a mandatory step before B. One question set (5) and one internal set (6) serve both services.

SAT BOUNDARY

SAT produces the scope, the domain list, the band and the first effort estimate. Delivery sets the duration, sales enters the price. SAT estimates independently first and challenges delivery's figure at the end; the challenge is recorded with its rationale either way.

Limits of the Assessment

KOMTAS

What this work does not do and does not guarantee is stated explicitly in the report itself

Domain boundaries are not drawn by Komtaş

The boundary is the organisation's decision. The assessment checks whether it is written and consistent; it does not propose one.

No organisation design

Headcount, reporting lines and incentive model are the organisation's decision. The work checks whether the current structure can carry the model.

No platform build, no product development

Self-serve platform capability is assessed; building it and developing data products are separate work, proposed separately.

No technology selection

The platform dimension assesses current capability; which product to buy is not part of this assessment.

Existing platforms not assessed on their own

Lakehouse or DWH is covered only for its ability to let domains publish; its own maturity is a Lakehouse or DWH Assessment.

No guarantee of a successful transition

The report shows which domain can start; it does not commit to the transition's success, which depends on capacity being assigned.

THE MOST MISUNDERSTOOD LIMIT

Organisations often expect a domain map from this work. A domain boundary is not a data decision but an organisational one and reflects the organisation's own division of work; a boundary drawn from outside is not accepted at the first conflict, and the model stops there.

“DO NOT MOVE TO MESH” IS ALSO A RESULT

If the whole matrix comes out not ready, the report says so plainly. If size, domain count or capacity cannot carry the model, improving a central structure produces more value than a mesh that cannot be run.

OBJECTIONS ARE RECORDED, NOT RESOLVED

“Our domains already own their data” is a common objection; it is recorded next to the finding with the number of named owners.

Package Files and Open Items

KOMTAS

The files of the Data Mesh Readiness Assessment package, each in Turkish (-tr) and English (-en), and the points to settle before the first proposal.

FILE · data-mesh-readiness-assessment...	PURPOSE	AUDIENCE
...-0-surec-akisi	Process flow from first contact to proposal	internal
...-1-blueprint	This document: services, method, sizing	internal
...-2-musteri-sunumu	Customer deck: two services, about 20 minutes plus appendix	customer
...-3a / 3b-...-girdi-formu	Proposal input forms for A and B, filled by SAT	internal
...-4a / 4b-...-teklif-sablonu	Proposal templates, numbered DMA / DMB	customer
...-5-musteri-soru-seti	Customer question set, questions marked A · B, A or B	customer
...-6-ic-soru-seti	Internal question set; Proposal Set S1 – S14	internal

WHAT CUSTOMER FILES DO NOT CONTAIN

No internal effort figures, no family decision codes (K1 – K7) and no mention of a data product assessment as a product. Follow-on work appears only as “separate proposal”. Unlike the Lakehouse and BI packages there is no access model here; readiness evidence is organisational.

OPEN ITEMS

1 Durations and efforts not calibrated

Values mirror the Lakehouse and BI packages and have not been checked against data mesh projects. Delivery confirmation is needed before the first proposal.

2 Readiness template set here first

This is the first readiness-variant package. AI Readiness and AI Governance Readiness follow the same structure: gate, per-domain result, no score.

3 Data product assessment folder stays empty

By decision K7 the content lives in D2 of B and in phase 0 of a future data product delivery service; no separate package is built.
