DATA MESH READINESS ASSESSMENT — INFORMATION GATHERING FORM

Information needed to determine the service to be proposed, its scope and duration. Numerical answers may be given as approximate values. The SERVICE column shows which service the question is required for (A · Data Mesh Readiness Check, B · Data Mesh Readiness Assessment).

#	SECTION	SERVICE	QUESTION	ANSWER	ADDITIONAL NOTES
1	Scope and Expectations	A · B	What decision is this work expected to support (reducing the load on the central data team, organisational change, platform investment, budget planning, etc.)? Has a decision been taken in favour of data mesh, or is it one of the options being evaluated? By when and by whom is the decision expected to be made?		
2	Scope and Expectations	A · B	Which of the following is closest to the expected outcome: determining whether the prerequisites are met for the domains in scope, with an indicative ready-to-start result; or current and target level in ten dimensions with a domain readiness matrix, pilot domain recommendation and transition plan?		
3	Scope and Expectations	A · B	What are the most frequently raised data issues today (request backlog in the central team, data that cannot be found, unclear data ownership, different definitions across units, etc.)?		
4	Scope and Expectations	A · B	Which domains are expected to be included in the assessment scope; approximately how many domains are in scope? Are the domain boundaries (which data belongs to which domain) defined in writing?		
5	Scope and Expectations	A · B	Which legal entities and locations are expected to be in scope?		
6	Scope and Expectations	A · B	Has an initiative or assessment on data mesh, domain-based data ownership or data organisation been carried out before; if so, can its results be shared?		
7	Scope and Expectations	B	Is there a domain being considered as a pilot, and a target start date?		
8	Current State	A · B	Are there data sets published today for use by other teams and called “data products”; approximately how many?		
9	Current State	A · B	Which data platforms are in scope (data warehouse, lakehouse, other) and how many are there? Can a domain publish a data product without raising a request to the central data team?		
10	Current State	A · B	What is the approximate size and workload of the central data team? Are there people dedicated to data work within the domains?		
11	Current State	B	Is a data catalogue in use; can the number of registered products and the average access-request time be shared?		
12	Current State	B	Are common standards across domains (schema, keys, naming, quality) and governance rules written, partly defined, or not defined? The same question applies to the organisation chart, role definitions and domain definitions.		
13	Current State	B	Is data work funded centrally or from the domains' budgets; is there an incentive or role definition that supports domains in taking on data responsibility?		
14	Current State	A · B	Are data areas subject to personal data protection or sector regulation in scope?		
15	Ways of Working	A · B	Who is the sponsor of the work (CDO or equivalent)? Is access to the calendars of senior management and domain managers easy, medium or hard?		
16	Ways of Working	A · B	What is the approximate number of people expected to be interviewed and their distribution across domains? In each domain, interviews with at least one manager, one data owner and one data consumer are expected.		
17	Ways of Working	A · B	Can the organisation chart, role assignments, domain definitions and standards documents be shared as part of the work?		
18	Ways of Working	B	Can human resources or the organisation unit take part in the work?		

#	SECTION	SERVICE	QUESTION	ANSWER	ADDITIONAL NOTES
19	Ways of Working	A · B	Is the work expected to be carried out remotely, at the customer's premises or in a hybrid way?		
20	Ways of Working	A · B	Is there an RFP or specification; how does the procurement process work, and are there any timing constraints (budget period, organisational change timetable, management presentation, etc.)?		

INFORMATION NOTE

Purpose of the form	This form has been prepared to collect the information needed to select the service to be proposed under Data Mesh Readiness Assessment and to determine the scope, duration and team composition of the work.
Two services	A — Data Mesh Readiness Check: a check of the five-item prerequisite gate for each domain in scope, based on documents and interviews; the result is the status of each item and an indicative, statement-based ready-to-start result per domain (Ready to start / Conditional / Not ready). B — Data Mesh Readiness Assessment: current and target level per domain in ten dimensions, a domain readiness matrix, a pilot domain recommendation, a prerequisite closing plan and a transition plan. The services are not mandatory continuations of one another; either can be the starting point.
Which question for which service	The SERVICE column shows which service the question is required for. If the service has not yet been decided, answering all questions is recommended. For A: 1–6, 8–10, 14–17, 19–20 For B: 1–20
Nature of the answers	Numerical answers may be given as approximate values; exact figures are not required. Questions whose answers are not known may be left blank.
System access	Neither service requires system access for Komtaş. The work is carried out through documents (organisation chart, role assignments, domain definitions, standards) and interviews. In B, where a data catalogue or platform exists, figures such as the number of registered products and access-request times are used as measurement evidence if the customer team shares them.
Customer-side participation	In each domain, at least one manager, one data owner and one data consumer are interviewed. For this reason, participation on the customer side is higher than in similar assessments and grows with the number of domains in scope. If interviews cannot take place on time, the related findings are reported as statement-based.
Questions left blank	Every topic left unanswered is stated as an assumption in the proposal. If the assumption does not hold, the scope and duration are re-evaluated.
Not asked in this form	Assessment dimensions, prerequisite items, target maturity levels and the methodology to be applied are not asked in this form. These are proposed by Komtaş based on the answers given, presented in the proposal and finalised jointly at the start of the work. Domain boundaries are the organisation’s decision; the assessment does not draw them but examines whether they are written and consistent.
Confidentiality	The information shared is used only for preparing the proposal and is not shared with third parties.
