DATA PRODUCT DELIVERY — INFORMATION GATHERING FORM

Information needed to determine the service to be proposed, its scope and duration. Numerical answers may be given as approximate values. The SERVICE column shows which service the question is required for (A · Phase 0 — Discovery and Design, B · Pilot and rollout).

#	SECTION	SERVICE	QUESTION	ANSWER	ADDITIONAL NOTES
1	Data and Consumers	A · B	Which datasets (tables, views, regular extracts, datasets that feed reports) are used by more than one team or system today, and who owns each one? Datasets without a known owner may also be listed.		
2	Scope and Expectations	A · B	What need has started this work (a stalled data mesh initiative, AI or agent projects that need trusted inputs, self-service analytics, data sharing with group companies or partners, different numbers for the same KPI, etc.)? Which decision is expected to be made, when and by whom?		
3	Scope and Expectations	A · B	What problems do the teams that use data raise most often today (long waits for access, different numbers for the same KPI, fields without a clear definition, tables that change without notice, data of unknown freshness, etc.)?		
4	Data and Consumers	A · B	Which datasets are expected or considered as candidates to be published as data products; which teams or systems will use each one, and for what purpose? Approximately how many candidates and how many different consumer groups (reporting and analytics, AI and agent applications, regulatory reporting, data sharing, etc.) are there?		
5	Data and Consumers	A · B	Through which channels is data provided to its users today (direct table access, shared views, file exports, APIs, event streams, etc.)? Approximately how many datasets are published with a known owner, a description and an access path?		
6	Scope and Expectations	A	Which source systems, legal entities and countries are expected to be in the scope of the work? Is any domain, system or company to be kept out of scope?		
7	Platform and Tools	A · B	Which data platform(s) are in use (Databricks, Snowflake, Google BigQuery, Microsoft Fabric, an on-premise data warehouse, etc.)? Is a platform change or migration planned in the near term?		
8	Platform and Tools	A · B	Which catalogue and governance tools are licensed and in use (Unity Catalog, Dataplex, Microsoft Purview, Informatica, OpenMetadata, another product, or none)? Where are the glossary and KPI definitions kept?		
9	Platform and Tools	A · B	How are data quality checks, freshness and volume monitoring, and lineage provided today? How are schema changes announced to the teams that use the data; is a data contract or a similar template used?		
10	Platform and Tools	A · B	How is a team's request for access to a dataset submitted today, who approves it, and how long does it take on average from request to data?		
11	Ownership and Regulatory Framework	A · B	Who will take ownership of the data products (a central data team, domain teams or a mixed structure)? Are data owner and data steward roles defined; is there a platform team? Is there a data mesh initiative running or planned?		
12	Ownership and Regulatory Framework	A · B	Is there a classification, masking and access policy under KVKK for datasets that hold personal data? Is it known whether the candidate data products hold personal data?		
13	Ownership and Regulatory Framework	A · B	Is the organisation subject to the regulatory reporting, data sharing or outsourcing rules of BDDK or a similar regulator? Is there an open audit finding in this area?		
14	Pilot and Rollout	B	Has a Phase 0 or a similar design study (dataset inventory, candidate data product list, product spec or data contract draft) been carried out before? Have a data product and the consumer that will use it been chosen for the pilot?		
15	Pilot and Rollout	B	How many source systems will feed the pilot product; approximately how many quality checks and service level objectives (freshness, availability) are expected to be defined? Through which channels will the product be offered to the consumer (SQL view or table, API, file export, event stream)?		

#	SECTION	SERVICE	QUESTION	ANSWER	ADDITIONAL NOTES
16	Pilot and Rollout	B	Who will build the pilot product (the organisation's data engineers, Komtaş or a mixed team), and does the organisation's team have capacity during the pilot (6–8 weeks)? Can access to the platform environments (development, test, production) and to the source data be provided at the start of the pilot?		
17	Pilot and Rollout	B	Which measures are expected to be used to assess the pilot (time from access request to data, number of teams using the product and usage, attainment of service level objectives, etc.)? In which catalogue will the product be published, and who will approve access requests?		
18	Pilot and Rollout	B	Which data products or domains are expected to be covered after the pilot? Is it more suitable to split the rollout into waves by domain or by product group?		
19	Pilot and Rollout	B	Two pricing models are offered for the rollout: a fixed fee per wave, or monthly time and materials with a cap. Which suits the organisation's procurement process better? Is a managed service for product operations after the rollout (monitoring, data contract changes, adding new consumers) being considered?		
20	Ways of Working	A	Can the data owners, the teams that use the data and the platform team make time for interviews? Approximately how many people are expected to be interviewed?		
21	Ways of Working	A · B	Can the dataset list, the data dictionary and the platform / catalogue documentation be shared at the start of the work? Can the work be carried out remotely, on site or in a mixed form?		
22	Ways of Working	A · B	Is there an RFP or specification; how does the procurement process work, and are there any timing constraints (budget period, AI project schedule, regulatory reporting date, etc.)?		

INFORMATION NOTE

Purpose of the form	This form has been prepared to collect the information needed to select the service to be proposed under Data Product Delivery and to determine the scope, duration and team composition of the work.
Two services	A — Phase 0, Discovery and Design: an inventory of existing datasets and data products, each placed on the eight properties of the minimum data product standard; a list of candidate data products with an assessment of each candidate's readiness for the pilot; a product spec and data contract draft for the pilot candidate; a target operating model sketch (owner, steward and platform team roles; publication and access request flow); a pilot plan with KPIs and baseline; a roadmap and price for the pilot and rollout. Fixed price; 3–4 weeks. B — Pilot and rollout: one to three data products built and released to consumers in a 6–8 week pilot (pipelines, data contract, quality checks, catalogue entry, access policy, lineage and monitoring; KPIs measured before and after); then rollout in waves by domain or product group. B is proposed on the basis of the Phase 0 outputs or an equivalent design.
Which question for which service	The SERVICE column shows which service the question is required for. If the service has not yet been decided, answering all questions is recommended. For A: 1–13, 20–22 For B: 1–5, 7–19, 21, 22
Nature of the answers	Numerical answers may be given as approximate values; exact figures are not required. Questions whose answer is not known may be left blank.
Shared datasets question	Question 1 is the most important question in this form. Datasets used by more than one team or system are the starting list of data product candidates; a known owner is the first condition for a dataset to be taken into the pilot. A short list per dataset is enough.
System access	A: The work runs on interviews, workshops, shared documents and the metadata of the platform and catalogue; no access to business data is needed; for the candidate products, it is confirmed that access to the source data is possible (read-only access or sample data). The counts needed for the KPI baseline (usage, access time) are run by the organisation's team or taken from existing logs and reports. B: Access to the platform environments and to the source data is defined in the pilot plan with the organisation's approval.
Regulatory questions	Questions 12 and 13 are asked to determine which data products need access policies, masking and additional controls because of personal data classification and regulatory obligations. Some of the answers may sit with units outside technology (legal, compliance, data protection officer).
Questions left blank	Each unanswered topic is stated in the proposal as an assumption. If the assumption does not hold, the scope and duration are reassessed.
Not asked in this form	The assessment of existing datasets against the minimum standard, the readiness of candidates for the pilot, the content of the product spec and data contract, the values of service level objectives, the technology mapping, operating model details and the methodology are not asked in this form. Komtaş proposes them based on the answers, presents them in the proposal, and they are finalised together in Phase 0.
Confidentiality	The information shared is used only for preparing the proposal and is not shared with third parties.
