ETL MODERNIZATION ON GOOGLE CLOUD — INFORMATION GATHERING FORM

Information needed to determine the service to be proposed, its scope and duration. Numerical answers may be given as approximate values. The SERVICE column shows which service the question is required for (A · ETL Migration Assessment, B · ETL Migration on Google Cloud).

#	SECTION	SERVICE	QUESTION	ANSWER	ADDITIONAL NOTES
1	Scope and Expectations	A · B	Which decision is this work expected to support (Oracle or ODI licence renewal, end of hardware support, an existing Google Cloud commitment, reducing dependency on a vendor, etc.)? When and by whom is the decision expected to be made?		
2	Scope and Expectations	A · B	Is there a target date for completing the migration? If so, what drives it (licence expiry, end of hardware support, budget period, etc.)?		
3	Scope and Expectations	A · B	Which legal entities, units or domains are expected to be in the scope of the work?		
4	Scope and Expectations	A · B	What are the most frequently raised issues with the ETL platform today (failed jobs, data delays, failures noticed late, slow changes, dependency on specific people, etc.)?		
5	Scope and Expectations	B	Has an ETL inventory, assessment or migration pre-study been carried out before? If so, can the package counts and complexity breakdown be shared?		
6	Source Systems and CDC	A · B	Can change data capture (CDC) be enabled on the source databases (SQL Server CDC, MySQL binlog, PostgreSQL logical replication, Oracle LogMiner, etc.)? If so, is approval from the database administrators required, and how long does that process take?		
7	Source Systems and CDC	A · B	Approximately how many source systems feed the ETL flows, and which technologies are they (SQL Server, MySQL, PostgreSQL, Oracle, SaaS applications, etc.)? Is there read access only to sources at SaaS or external service providers?		
8	Source Systems and CDC	A · B	Is any data received through files (CSV, Excel, partner files) or APIs?		
9	Current ETL Environment	A · B	Which ETL tool and version is used (Oracle Data Integrator 11g or 12c, Informatica PowerCenter, SSIS, Talend, etc.)? If there is more than one tool, which are in scope?		
10	Current ETL Environment	A · B	Approximately how many ETL packages or jobs are there, and approximately how many of them run actively?		
11	Current ETL Environment	A	How many ODI repositories and environments (development, test, production) are there, and which are in scope?		
12	Current ETL Environment	A · B	Which technology does the data warehouse run on (Oracle Database version, Exadata, etc.) and which layers does it consist of (ODS, staging, DWH, data marts, etc.)?		
13	Current ETL Environment	A · B	How often do the flows run (daily, hourly, intraday)? Approximately how long are the overnight load window and the longest-running flow?		
14	Current ETL Environment	A · B	How are failures in the flows noticed today (automatic alert, operator check, user report, etc.)?		
15	Current ETL Environment	A · B	Was the platform built or is it operated by a vendor? Is the vendor available for interviews and questions during the work?		
16	Target and Regulatory Framework	A · B	What is the organisation's current use of Google Cloud (projects, BigQuery use, a commitment agreement with Google Cloud, etc.)?		
17	Target and Regulatory Framework	A · B	Has BigQuery been agreed as the target data warehouse, or is another target also being considered?		
18	Target and Regulatory Framework	A · B	Can the migration of BI reports and dashboards be kept outside the scope of this work? Which BI tools are connected to the data warehouse?		
19	Target and Regulatory Framework	A · B	Is the organisation subject to the data residency rules of BDDK or a similar regulator? Are there parts of the data that must be kept in Türkiye?		

#	SECTION	SERVICE	QUESTION	ANSWER	ADDITIONAL NOTES
20	Target and Regulatory Framework	A · B	Does processing tables containing personal data in a Google Cloud region outside Türkiye require explicit consent, an undertaking or another arrangement under KVKK? Has the legal or compliance unit given its view?		
21	Target and Regulatory Framework	B	Will the Google Cloud project, billing account and network connectivity to the source systems (VPN, Interconnect) be provided by the organisation? Are separate development, test and production environments expected?		
22	Ways of Working	A	The repository queries can be run in one of two ways: the organisation's team or the vendor runs the read-only query script and shares the output, or Komtaş is given read-only access to the ODI repository. Which is suitable, and how long does the approval process for running the script or granting access take?		
23	Ways of Working	A	How long are ODI run logs (session history) retained?		
24	Ways of Working	A · B	Can the platform owner and the data warehouse and database administration teams make time for the work; approximately how many people are expected to be interviewed?		
25	Ways of Working	B	Can the business owners who will approve the parallel-run and reconciliation results be named? Which critical reports will be checked first for correctness after the migration?		
26	Ways of Working	B	Two pricing models are offered for the migration: a unit price per package by complexity group, or monthly time and materials with a cap. Which suits the organisation's procurement process better?		
27	Ways of Working	A · B	Is there an RFP or specification; how does the procurement process work, and are there any timing constraints (budget period, licence renewal date, etc.)?		

INFORMATION NOTE

Purpose of the form	This form has been prepared to collect the information needed to select the service to be proposed under ETL Modernization on Google Cloud and to determine the scope, duration and team composition of the work.
Two services	A — ETL Migration Assessment: measuring the current ETL estate and pricing the migration; the result is a package inventory, complexity groups, a per-source CDC check, the target architecture, an effort model, a wave plan and migration price options. Fixed price; 3–4 weeks. B — ETL Migration on Google Cloud: building the platform on Google Cloud, converting the flows in waves, parallel run and cutover; the result is a platform running on Google Cloud, the ODI environment switched off and runbooks handed over. B is proposed on the basis of A's inventory or an equivalent inventory produced with the repository queries.
Which question for which service	The SERVICE column shows which service the question is required for. If the service has not yet been decided, answering all questions is recommended. For A: 1–4, 6–20, 22–24, 27 For B: 1–10, 12–21, 24–27
Nature of the answers	Numerical answers may be given as approximate values; exact figures are not required. Questions whose answer is not known may be left blank.
System access	A: Carried out in one of two ways, chosen at the start of the work. In Mode A, the organisation's team or the vendor runs the read-only repository queries and shares the output; Komtaş is given no system access. In Mode B, Komtaş is given read-only access to the ODI work repository and to the dictionary views of the target data warehouse and runs the queries itself. In both cases nothing is written to the repository and no business data is read. B: Access to the source systems, the ODI environment and the Google Cloud project is defined in the migration plan with the organisation's approval.
Discovery form and repository queries	Two files are sent separately after kick-off: the 13-sheet discovery form (etl-migration-gcp-7-discovery-formu-tr.xlsx) and the read-only repository query script (etl-migration-gcp-8-odi-repository-sorgulari-en.sql). Part of the form is filled in from the query outputs; the organisation's team or the vendor adds the business meaning. The questions in this form do not replace those files; they only collect the first information needed for the proposal.
Regulatory questions	Questions 19 and 20 are asked to determine whether data residency and personal data rules limit the scope that can move to Google Cloud. Data that must be kept in Türkiye stays out of scope until the Google Cloud region in Türkiye is open. Some of the answers may sit with units outside technology.
Questions left blank	Each unanswered topic is stated in the proposal as an assumption. If the assumption does not hold, the scope and duration are reassessed.
Not asked in this form	Effort groups, unit hours, the Google Cloud equivalents of ODI objects, target architecture details and the methodology are not asked in this form. Komtaş proposes them based on the answers and the measurement results, presents them in the proposal, and they are finalised together at the start of the work.
Confidentiality	The information shared is used only for preparing the proposal and is not shared with third parties.
