ENTERPRISE LAKEHOUSE ADVISORY SERVICES · SERVICE A

Lakehouse Health Check — Proposal Input Form

Information to be collected for a high-level, technology-independent assessment of the current architecture. Once the form is completed and returned, the proposal text is produced.

Rows marked ● are BLOCKERS — the proposal cannot be written without them and they cannot be filled with assumptions.
If rows marked ○ remain missing, they are written into the proposal as assumptions and go to section 5.

LIMIT OF SERVICE A: it is based on documents, statements and walkthroughs shown on screen; Komtaş is not given system access and no measurement is committed. For this reason log retention, billing access and
platform metric access are not asked in this form — these are inputs to services B and C.
A does not produce a maturity level or score; the result is a red / amber / green status per heading, with findings, risks and recommendations. If the customer expects a maturity level and target state per area, the right service is B, not A; this is clarified in the first meeting.

A. Organisation and Proposal Details

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Organisation and legal entities in scope**	Cover, 1. Executive Summary	
○	Proposal addressee — name, title, unit	Cover, 9.2	
○	Proposal date and expected decision date	Cover, 9.1 validity	
○	Is there an RFP or specification	Proposal structure	
○	Are there competitors, and who	Emphasis and section weights	

B. Decision — What the Assessment Will Support

A is a short, high-level piece of work; on its own it does not support a major investment decision.
If the decision the customer expects is an investment or platform change, the right service is B.

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Which decision will this assessment support**	1. Executive Summary, 2.1 Objective	
●	**Is the expected output a red / amber / green status and findings per heading, or a maturity level and target state per area**	Service selection — A or B	
○	Who will make the decision, and by what date	6. Schedule, 9.1 validity	
○	What is the most frequent complaint today	P1 focus areas	
○	Has an assessment been carried out before	5. Assumptions	

C. Scope

A works on six technology-agnostic headings. The ML feeding and BI serving headings are not in the scope of A.

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Which platform will be assessed — lakehouse, warehouse or both**	2.1 Objective, 2.4 Out of scope	

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Are all six headings in scope**	2.2 Scope	
○	Number of domains or business units in scope	2.3 Scope size	
○	Are there any environments or areas to be excluded from scope	2.4 Out of scope	
○	Are the ML feeding and BI serving headings required	Service selection — B required	

D. Environment and Technology

> A is technology-agnostic; these questions are for understanding the architecture, not for platform-specific measurement.

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Which technology is the lakehouse built on — Databricks, Snowflake, Cloudera, open source or other**	2.3, need for service C	
○	Table format or formats in use	2.3 Scope size	
○	Query engine(s)	2.3	
○	Object storage and cloud provider	2.3	
○	Is there a catalogue product	2.3	
○	Is there a streaming pipeline	2.3	

E. Scale

> In A, scale values are taken as statements and are not verified; verification is the subject of services B and C.

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Approximate number of tables**	Driver 1, 2.3	
●	**Approximate total data volume**	Driver 2, 2.3	
○	Number of source systems	Driver 4	
○	Number of environments — dev, test, prod	Driver 8	
○	Information on the number of active users or consumers	2.3	

F. Document and Interview Access

> The evidence sources for A are documents, interviews and walkthroughs shown on screen by the platform team; Komtaş is not given system access. This section directly determines the schedule.

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Estimated number of people to be interviewed**	Schedule, 6. Project Plan	
●	**Can an architecture document, data flow diagram or similar document be shared**	P1 evidence collection	
○	Can interviews be arranged with the platform owner and the data engineering team	7.2 Expected participation	

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
○	Can configuration and policy files be shared	P1	
○	Can the platform team give an on-screen walkthrough — no system access is requested	P1, 7.2 Expected participation	
○	Will interviews be held remotely or on site	5. Assumptions	

G. Organisation and Commercial Framework

	TO ASK	WHERE IT FILLS IN THE PROPOSAL	ANSWER
●	**Can a platform owner be assigned**	7.2, 5. Assumptions	
○	Who is the project sponsor	7.3 Governance	
○	Is there an approved budget	8. Fees	
○	Is there a schedule constraint	6. Project Plan	
○	Procurement process and approval steps	9.1 General Terms	

Band Estimate — Service A

A uses seven of the eleven drivers; measurement-dependent drivers (log retention, access approval, query volume, number of streaming pipelines) are not asked in A.

#	DRIVER	SMALL	MEDIUM	LARGE	RESULTING BAND
1	Number of tables	≤ 300	300 – 1500	> 1500	
2	Total data volume	≤ 50 TB	50 – 500 TB	> 500 TB	
3	Number of source systems	≤ 5	5 – 15	> 15	
4	Number of table formats in use	1	2	> 2	
5	Number of query engines	1	2	> 2	
6	Number of environments	≤ 2	3	> 3	
7	Number of people to be interviewed	≤ 5	5 – 12	> 12	
	RESULT — selected band	1 week · 6 pd	1.5 weeks · 9 pd	2 weeks · 12 pd	

CUSTOMER EFFORT — small 2 days · medium 3 days · large 4 days. The load of A on the customer side is low; this is a point to highlight in sales.

If the customer moves to B or C after A, the evidence inventory produced in A is reused and deducted from the effort of the relevant service; the same work is not invoiced twice.

Service Selection Check

Before filling in the form, make sure that A is the right service.

STATUS	RIGHT SERVICE
The aim is to understand the current architecture and see risks and areas for improvement	A
A maturity level per area (current and target) and a comparable baseline are required	B
A target architecture decision and a modernisation roadmap are required	B
Deep measurement of a specific technical problem is required — performance, cost, file layout	C
First contact, budget unclear, a quick output is required	A
An investment or platform change decision is to be made	B

Blocker Checklist

SECTION	BLOCKER QUESTION	ANSWERED?
A	Organisation and legal entities in scope	
B	Which decision will this assessment support	
B	Is the expected output a red / amber / green status and findings per heading, or a maturity level and target state per area	
C	Which platform will be assessed — lakehouse, warehouse or both	
C	Are all six headings in scope	
D	Which technology is the lakehouse built on — Databricks, Snowflake, Cloudera, open source or other	
E	Approximate number of tables	
E	Approximate total data volume	

SECTION	BLOCKER QUESTION	ANSWERED?
F	Estimated number of people to be interviewed	
F	Can an architecture document, data flow diagram or similar document be shared	
G	Can a platform owner be assigned	

IF A BLOCKER IS MISSING — no proposal is written. If one must be written, each missing item is entered as an assumption in section 5 of the proposal.

The second row of section B is a special case: if the customer expects a report with a maturity level or target state per area, A is the wrong service and this is stated at the outset.
