LAKEHOUSE ASSESSMENT — INFORMATION GATHERING FORM

Information needed to determine the service to be proposed, its scope and duration. Numerical answers may be given as approximate values. The SERVICE column shows which service the question is required for (A · Health Check, B · Modernization Assessment, C · Technology Deep Dive).

#	SECTION	SERVICE	QUESTION	ANSWER	ADDITIONAL NOTES
1	Scope and Expectations	A · B · C	What decision is this work expected to support (investment, platform change, budget planning, audit preparation, resolution of a specific technical problem, etc.)? By when and by whom is the decision expected to be made?		
2	Scope and Expectations	A · B · C	Which of the following is closest to the expected outcome: a high-level picture of the current architecture, a target architecture and modernization roadmap, or a measurement-based deep review of a specific technical problem?		
3	Scope and Expectations	A · B · C	What are the most frequently raised issues with the platform today (query performance, cost, data latency, failed jobs, trust in data, etc.)? If there is a specific technical problem, how does it manifest and through which measurement?		
4	Scope and Expectations	A · B · C	Which legal entities, units or domains are expected to be included in the assessment scope?		
5	Current Environment	A · B · C	On which platform or product does the lakehouse run (Databricks, Snowflake, Cloudera, open-source components, etc.); what is its version and deployment model (SaaS, managed service, on-premises installation)? Is there a data warehouse in addition to the lakehouse?		
6	Current Environment	A · B · C	Which table format(s) (Iceberg, Delta, Hudi, raw parquet) and which query engine(s) are used?		
7	Current Environment	A · B	With which cloud provider, or on-premises, is the object storage hosted?		
8	Current Environment	A · B	Are there streaming pipelines; if so, with which technology and approximately how many pipelines?		
9	Current Environment	A · B	What are the approximate number of tables, total data volume (stating whether raw or compressed) and daily data growth?		
10	Current Environment	A · B · C	Approximately how many source systems feed the platform, and how many environments are there (dev, test, prod, DR)?		
11	Current Environment	A · B	What is the approximate daily query volume and the number of active users or consumers?		
12	Ways of Working	B · C	How long are query logs, job history and metadata retained?		
13	Ways of Working	B · C	Can Komtaş be given read-only access to platform metrics and system tables; if so, how does the approval process work and how long does it take? If access cannot be given, can the customer team run the agreed control queries and share the outputs?		
14	Ways of Working	A · B · C	Can architecture documents, data flow diagrams, configuration and policy files be shared; can the platform team give an on-screen walkthrough?		
15	Ways of Working	A · B · C	Can the platform owner and the data engineering team allocate time to the work; approximately how many people are expected to be interviewed?		
16	Ways of Working	A · B · C	Is there an RFP or specification; how does the procurement process work, and are there any timing constraints (audit date, budget period, etc.)?		

FINANCIAL SECTOR ANNEX

Added to the question set for banks, participation banks, insurance and financial leasing companies. Regulatory reporting, data residency and audit obligations constrain the assessment scope, the access model and the target architecture options.

#	SECTION	SERVICE	QUESTION	ANSWER	ADDITIONAL NOTES
17	Regulatory Framework	A · B · C	Which legal and regulatory uses run on or are fed from the lakehouse? (BDDK and TCMB reporting sets, TFRS 9 and capital adequacy calculations, MASAK scenarios, independent audit and KAP disclosures)		
18	Regulatory Framework	A · B · C	Where is the lakehouse data hosted? What is the organisation's current position on cloud and offshore hosting; is the target architecture recommendation expected to evaluate these options?		
19	Regulatory Framework	A · B · C	Are there open findings from internal audit, BDDK audit or independent audit concerning the lakehouse, data quality, access authorisation or lineage; is the report expected to reference these findings?		
20	Ways of Working	B · C	Is separate approval from the information security or compliance unit required for read-only access or for sharing control query outputs? For tables containing personal data or customer secrets, is work expected to be limited to metadata only?		
21	Ways of Working	A · B · C	Is the lakehouse platform operated by a vendor or outsourced provider; is vendor involvement required to access configuration and log information?		
22	Ways of Working	A · B · C	Is the work expected to be carried out at the customer's premises; is the use of customer-provided devices or VDI mandatory?		

INFORMATION NOTE

Purpose of the form	This form has been prepared to collect the information needed to select the service to be proposed under Enterprise Lakehouse Advisory Services and to determine the scope, duration and team composition of the work.
Three services	A — Health Check: a technology-agnostic, high-level assessment of the current architecture under six headings; the result is a red / amber / green status per heading with findings, risks and recommendations. B — Modernization Assessment: current and target state in eight areas, target architecture and modernization roadmap; the result is the current and target level per area. C — Technology Deep Dive: a measurement-based deep technical review of a single technology in selected areas; the result is a measurement report for the selected areas. The services are not mandatory continuations of one another; any of them can be the starting point.
Which question for which service	The SERVICE column shows which service the question is required for. If the service has not yet been decided, answering all questions is recommended. For A: 1–11, 14–19, 21, 22 For B: 1–22 For C: 1–6, 10, 12–22
Nature of the answers	Numerical answers may be given as approximate values; exact figures are not required. Questions whose answers are not known may be left blank.
System access	A: Komtaş is not given system access. The work is carried out through documents, interviews and on-screen walkthroughs given by the platform team. B: Carried out in one of two ways, decided at the start of the work. If carried out without system access, the customer team runs the agreed control queries and shares the outputs; areas whose queries cannot be run are reported as statement-based with low confidence. In the other way, Komtaş is given read-only access. C: Requires read-only access; an area for which access cannot be provided is left out of scope.
Regulatory framework questions	The questions in the Financial Sector Annex are asked to determine whether regulatory reporting, data residency and audit obligations constrain the assessment scope, the access model and the target architecture options. Some of the answers may sit with units outside technology.
Questions left blank	Every topic left unanswered is stated as an assumption in the proposal. If the assumption does not hold, the scope and duration are re-evaluated.
Not asked in this form	Assessment headings and areas, target maturity levels, the areas to be reviewed under C and the methodology to be applied are not asked in this form. These are proposed by Komtaş based on the answers given, presented in the proposal and finalised jointly at the start of the work.
Confidentiality	The information shared is used only for preparing the proposal and is not shared with third parties.
