OPERATIONAL DATA GOVERNANCE ENABLEMENT — INFORMATION GATHERING FORM

Information needed to determine the service to be proposed, its scope and duration. Numerical answers may be given as approximate values. The SERVICE column shows which service the question is required for (A · Phase 0 — Discovery and Design, B · Pilot and rollout).

#	SECTION	SERVICE	QUESTION	ANSWER	ADDITIONAL NOTES
1	Scope and Expectations	A · B	What need has started this work (data issues created at source, an audit finding, a new ERP or application programme, AI and analytics initiatives, etc.)? Which decision is expected to be made, when and by whom?		
2	Scope and Expectations	A · B	What are the most frequently raised data issues today (duplicate customer, outlet or product records, fields without an owner or definition, unflagged personal data, inconsistent reports, etc.)? In which business processes do they arise?		
3	Scope and Expectations	A · B	Which legal entities, countries and business processes are expected to be in the scope of the work (customer or outlet onboarding, product or material creation, supplier registration, etc.)?		
4	Scope and Expectations	A · B	Does the organisation run a data governance programme on the analytical side (data catalogue, glossary, data quality checks on the data warehouse, etc.)? If so, which unit runs it?		
5	Applications and Development Model	A · B	Which operational systems create customer, outlet, product, supplier or similar records, and how is each one developed and changed (in-house team, SAP and an implementation partner, SaaS or packaged software)? Who makes the changes in each system?		
6	Applications and Development Model	A · B	If SAP is used, which version is it (ECC, S/4HANA) and who is the implementation partner? Is SAP MDG licensed and in use; if so, for which domains?		
7	Applications and Development Model	A · B	Which integration layer is used between the applications (API gateway, iPaaS, middleware such as SAP Integration Suite, event or change data capture infrastructure, etc.)?		
8	Tools and Change Process	A · B	Which data governance, data catalogue and data quality products are licensed and in use (Informatica IDMC, Qlik Talend Cloud, OpenMetadata, another product, or none)? If Informatica is used, which IDMC services are licensed?		
9	Tools and Change Process	A · B	Which tool manages application changes (Jira, Azure DevOps, etc.)? Is there an approval step, such as a design review or a change advisory board (CAB), that changes pass before release?		
10	Tools and Change Process	A · B	How are the functional specification and transport approval managed for SAP changes, and the vendor release and configuration changes for SaaS products? Is the change process defined in the contract with the implementation partner or vendor?		
11	Critical Data and Regulatory Framework	A	Approximately how many critical data elements (CDEs) are estimated? Is there an existing CDE list, glossary or definition of data ownership (data owner, data steward)?		
12	Critical Data and Regulatory Framework	A · B	Is there a classification policy under KVKK for fields that hold personal data? When a new field is added to an application, how is it decided today whether it holds personal data?		
13	Critical Data and Regulatory Framework	A · B	Is the organisation subject to the data quality, change management or information systems audit rules of BDDK or a similar regulator? Is there an open audit finding in this area?		
14	Pilot and Rollout	B	Has a Phase 0 or a similar design study (application inventory, CDE list, a mapping of which building block applies to which system) been carried out before? Have a candidate process and system been chosen for the pilot?		
15	Pilot and Rollout	B	Who will make the changes in the pilot application (in-house team, SI partner, vendor), and does this team have capacity during the pilot (6–8 weeks)? Is a real release planned in this period?		

#	SECTION	SERVICE	QUESTION	ANSWER	ADDITIONAL NOTES
16	Pilot and Rollout	B	Which measures are expected to be used to assess the pilot (error rate at entry; share of CDEs with an owner, glossary term and data quality rule; time to add a new field with its definitions, etc.)? Are the current values of these measures known?		
17	Pilot and Rollout	B	Which systems or processes are expected to be covered after the pilot? Is it more suitable to split the rollout into waves by process or by system?		
18	Pilot and Rollout	B	Two pricing models are offered for the rollout: a fixed fee per wave, or monthly time and materials with a cap. Which suits the organisation's procurement process better? Is a managed service for rule and metadata operations after the rollout being considered?		
19	Ways of Working	A	Can the process owners, application owners, IT teams and, where relevant, the implementation partner and vendors make time for workshops and interviews? Approximately how many people are expected to be interviewed?		
20	Ways of Working	A · B	Can the change process documents (Jira or Azure DevOps workflows, CAB procedure, transport procedure) and the licence list be shared at the start of the work? Can the work be carried out remotely, on site or in a mixed form?		
21	Ways of Working	A · B	Is there an RFP or specification; how does the procurement process work, and are there any timing constraints (budget period, ERP programme schedule, etc.)?		

INFORMATION NOTE

Purpose of the form	This form has been prepared to collect the information needed to select the service to be proposed under Operational Data Governance Enablement and to determine the scope, duration and team composition of the work.
Two services	A — Phase 0, Discovery and Design: application inventory and the development model of each system; where, by whom and through which process the critical data elements (CDEs) are created; a map of the change process; current tools and licences; a system × building block matrix; a target operating model draft; the pilot design and KPI baseline; a roadmap and price for the pilot and rollout. Fixed price; 3–4 weeks. B — Pilot and rollout: a 6–8 week pilot on one business process and one system (data quality checks at entry, a change gate applied in a real release, glossary and catalogue entries, lineage, a steward workflow, KPIs measured before and after); then rollout in waves by process or system. B is proposed on the basis of the Phase 0 outputs or an equivalent design.
Which question for which service	The SERVICE column shows which service the question is required for. If the service has not yet been decided, answering all questions is recommended. For A: 1–13, 19–21 For B: 1–10, 12–18, 20, 21
Nature of the answers	Numerical answers may be given as approximate values; exact figures are not required. Questions whose answer is not known may be left blank.
Development model question	Question 5 is the most important technical question in this form. Whether a system is developed in-house, run with an implementation partner, or is SaaS or packaged software decides where the data quality checks and the change gate sit in that system. A short list per system is enough.
System access	A: The work runs on interviews, workshops, shared documents and the metadata of the tools; no access to business data is needed. The counts needed for the KPI baseline are run by the organisation's team or taken from existing reports. B: Access to the pilot system, the integration layer and the environment of the data governance / data quality tool is defined in the pilot plan with the organisation's approval.
Regulatory questions	Questions 12 and 13 are asked to determine which building blocks and which systems are brought forward by personal data classification and regulatory obligations. Some of the answers may sit with units outside technology (legal, compliance, data protection officer).
Questions left blank	Each unanswered topic is stated in the proposal as an assumption. If the assumption does not hold, the scope and duration are reassessed.
Not asked in this form	Which building block is applied in which system through which lever, rule design, the mapping of tool components, operating model details and the methodology are not asked in this form. Komtaş proposes them based on the answers, presents them in the proposal, and they are finalised together in Phase 0.
Confidentiality	The information shared is used only for preparing the proposal and is not shared with third parties.
